## MAINTENANCE ADVICE

---

### Tips in advance:

- Ideal environment temperature: 20 °C
- Ideal humidity: Between the 50 & 60%
- Its is best to moisten the table in extremely hot and dry weather

### Warning: underfloor heating and air heating can also provide dry air

- Always clean with an damp cloth

### Warning: never use detergent

---

### Accessories:

- Oil
- Oil sponge
- Lint-free cloths
- Sanding paper (grit 300)

*Tip: Maintance set is available on our webshop.*

---

### Process:

#### 1. Sanding:

- For the best result, first sand the table with sanding paper (grit 300).
- Always sand the table along the length of the wood, with the graining (otherwise you will get scratches!).
- Tip for scratches: keep sanding until the scratches have disappeared, but make sure you don't sand a hole in the table...

#### 2. Grease:

- Make the table dust free with a slightly damp cloth.
- Soak the sponge thoroughly in the oil and grease the table with long strokes (including the edges and the end on the table).
- Take a cloth and try to rub the remaining oil off the table (you can rub a lot here).
- Let the table absorb the oil for 30 minutes.
- Then take a new cloth and rub the table for a while.

#### 3. Aftercare:

- Hang out the used cloths to prevent them from heating (fire hazard!)
- Repeat the table maintenance 1 to 2 times a year.
