NT Cutter
EVER NEW & EVER SHARP

NT Cutter Designer knife

-perfectie en snijden 'met gevoel'

This knife enables perfect curves and openings to be cut in the film without damaging the car paintwork or substrate as it allows more "feel" during cutting as the correct cutting pressure is easier to determine. Fits perfectly in the hand. The blades can not only be placed in the head in the straight, traditional way, but also in the 'designers-way'. Place the blade in the rear of the head to create an extremely sharp cutting angle for perfect uniform cuts. This art knife is manufactured from extremely durable plastic with a stainless steel head.

Recommended knife blades: 120-KB-25, 120-SAB10, 120-BD100

OLFA

OLFA Standard Art Knife with 30 Blades and Needle

-Precision on a very high level

Designer's Art Knife with a spatula edge. The package includes 30 blades and a needle. The square-shaped spare blade case works as a standish when connected to the blade cover. The accessorius needle marks on plastic modeling and peels labels.

The come in handy spatula at the top end smoothes adhesive materials and molds a shape in clay. Ideal for designers, hobbyists, craftsmen. Besides, dental technicians choose the AK-5 for making up dentune molds.

Recommended knife blades: 120-KB-25

100-AK-5 price per piece

100-SOC

A knife
that DOES NOT
cut in to the
SUBSTRATE

- Cutting Security films
- Cutting Banner materials
- Cutting PVC films
- Cutting windowfilms
- Easy to use at your printer
- Easy to use at your plotter

Attention:
the blade cannot be replaced

SOTT

SOTT Vinyl Cutter

- Quick and easy cutting without damaging the substrate
- Fast cutting of film from a roll while it's still in the printer or cutting plotter.
- Fast cutting of film to size when it's already on the car.

This handy little knife is a 'must have' for every fast fitter. Not only that, this knife can do much more as it was originally intended for the opening and cutting of envelopes, paper, cardboard boxes, etc.

You know the problem: the film is on the car - get your knife - blade out - cut the film - and then pray you haven't cut in to the paintwork... There's a much easier and less stressful way. Just take your Easy Cutter and cut your films to size in one go, without fear of cutting in to the paintwork.

The secret is in the shape and construction of the Easy Cutter. It has a plastic head with a flat underside and an angled stainless steel blade mounted on the inside of the head. The film runs between the top and underside of the head, so the blade can't possibly come in contact with the substrate.

It's also 100% safe as the blade is concealed in the head. So having to slide the blade back in before putting the knife in your pocket or tool bag is a thing of the past. The Easy Cutter is manufactured from durable plastic with rubber inlays that prevent slipping.

In short: a simple tool for quickly cutting film without a lot of hassle.

OLFA

OLFA 60mm Deluxe Handle Rotary Cutter

-Safety locking system

OLFA's largest rotary cutter can cut up to eight layers of thin materials, making it perfect for medium- to large-sized projects and long cuts. Its curved handle, suitable for right- or left-handed use, prevents the fatigue typically associated with repetitive cutting. The dual-action safety lock and blade cover are designed to ensure your safety. Good For: cutting strips, multiple layers and finishing quilts prior to binding. Cuts fabric, paper, tarp, vinyl, upholstery, leather and other thick textiles.

OLFA

OLFA 45mm Deluxe Handle Rotary Cutter

-Safety locking system

This rotary cutter is a combination of comfort, convenience, strength and safety. Its ergonomic handle with anti-slip rubber grip eliminates hand fatigue and stress, while the squeeze trigger allows the blade to self-retract for safety. The cutter can handle up to six layers of thin materials. And the quick blade change feature won't slow down your project. Good For: cutting strips and multiple layers at once. Cuts fabric, paper, tarp, vinyl, upholstery and more.

OLFA

OLFA 60mm Quick Change Rotary Cutter

-Quick Blade changing system

When you're in the middle of a project, you don't want to waste time changing blades. This rotary cutter makes it easy, with a slide lock that quickly releases the old blade and locks the new one in place. The cutter can accommodate up to eight layers of thin materials. Good For: cutting strips, multiple layers and finishing quilts prior to binding. Cuts fabric, paper, tarp, vinyl, upholstery, leather and other thick textiles.

OLFA

OLFA 45mm Quick Change Rotary Cutter

-Quick Blade changing system

The Quick-Change Rotary Cutter has an easy 45mm blade change with just a single click. No more assembly with a washer and a nut. Just slide the locking mechanism and the blade immediately releases. The innovative split blade cover allows for switching hands effortlessly without reassembly and offers extra safety protection while cutting. Each side slides back and forth independently so the user can easily switch hands to cut. The blade is made of high quality tungsten carbide tool steel for unparalleled sharpness and superior edge retention.

EXCEL BLACK
ULTRA SHARP BLADE OLFA

Olfa EXCEL BLACK™ Ultra Sharp 12.5mm Wallpaper Cutting Blades

- Super thin: 0.25mm
- Ultra sharp

This OLFA® EXCEL BLACK™ 12.5mm blade is the only blade in the world developed specifically for cutting wallpaper. It has been designed with a unique 65° angle, which was researched to be the ideal angle for cutting paper against a wall, and getting into corners. The ultra thin (0.25mm) blades will cut even the wettest, pasted wallpaper without dragging or tearing, and more importantly, leave near enough invisible joins.

Splicing two layers of wallpaper is a pain with other blades, but these ones make it effortless, and leave results that impress. The blade has 13 snap segments.

- Sharpest possible blade for cutting wallpaper
- Ultra thin for near invisible joins
- Cuts through wet, pasted paper without dragging or tearing.

SECURIT CUTTING MAT

Makes
that perfect
cutting table

SECURIT™

CUTTING MAT -triple layer

-3mm (120 mil) thick double layer calibrated cutting mat
-available in black, green and transparent

High quality cutting mat which closes after every cut, preventing your knife from following previous cuts. These mats are triple layer enabling both sides to be used. So they'll last twice as long!

The mat has a solid core which ensures that it remains flat on the table without curling.

The calibrations on the upper side allow the accurate positioning of the film or cutting ruler.

Handy tip: Use a number of smaller mats on a large table - e.g. 2'x 3' (60x90) instead of one large mat. Experience has taught us that some areas of a table are used more often than others, so the mats wear out quicker in some places than others. If you follow this advice you should only have to replace a single small mat instead of the whole table area. Simply attach the mat to the table with double sided tape. Never place warm or hot things (e.g. cups of coffee) on the cutting mat. This will cause permanent surface damage to the mat.

Cutting tracks are eliminated ensuring every cut is perfect. Even cutting in the finest detail is possible.

Transparent cutting mats are ideal for use on illuminated tables, because the light shines through the cutting mat.

OLFA CUTTING MAT multi-purpose self-healing craft

-One side shows cm, other side shows inches

CM series multi-purpose self-healing cutting mats are 2mm thick and especially designed for use with OLFA standard-duty cutters, heavy-duty cutters, art knives, rotary cutters and specialty cutters.

Double-sided with green base color and white grid lines with a metric grid on one side and an inch grid on the other. Grid lines are designed for easy measuring and for accurate cutting of straight lines and precise angles.

Self-healing, an OLFA original technology refers to the ability of the surface to return to its original shape after being cut and are ideal for general quilt cutting. A three-layer structure and soft cutting surface realize smooth cutting even after many years use. CM mats protect your work area and greatly extend the life of your blades.

Warning!

- Keep the mats away from sunlight and heat
- mats must be stored flat
- not suitable for use with steam irons
- not suitable for use with OLFA MC-45 and MC-45/DX

250-RM-IC series

OLFA

OLFA CUTTING MAT self-healing for Rotary Cutters

-One side shows cm, other side shows inches

Design for crafters, OLFA self-healing rotary mats are 1,6mm thick, double sided, triple layer mats with a dark green base color and yellow grid lines with a metric grid on one side and an inch grid on the other. Grid lines are designed for easy measuring and for accurate cutting of straight lines and precise angles.

The markings take the difficulty out of such tricky tasks as fashioning true bias strips, cutting strips into squares and triangles, and perfectly squaring up blocks to complete a project.

Self-healing, an OLFA original technology refers to the ability of the surface to return to its original shape after being cut and are ideal for general quilt cutting. A three-layer structure and soft cutting surface realize smooth cutting even after many years use. Rotary mats protect your work area and greatly extend the life of your rotary blades.

Warning!

- Keep the mats away from sunlight and heat
- mats must be stored flat
- not suitable for use with steam irons
- not suitable for use with OLFA MC-45 and MC-45/DX

YELLOW-5

The
cutting ruler
CANNOT SLIP
during cutting

SOTT

THE YELLOW 5 CUTTING RULER

- aluminium cutting ruler with raised edge to protect fingers
- special anti-slip underside

Anti-slip cutting ruler, indispensable for advertising companies, window film installers, exhibition stand builders, photo studios, etc. that need to cut straight lines without the cutting ruler sliding all over the place.

A unique solid aluminium cutting ruler with all of the advantages that you could possibly wish for: strong, stable, straight, but above all safe. This allows you to make long cuts with ease, without the fear of the knife 'jumping' and running across your fingers. The workshop becomes safer and production is increased. Large sheets of film and thick, rigid materials can now be cut with ease.

The calibrations are clearly displayed in centimetres. This allows cuts to be made straight to size.

Perfect cuts

Cut PVC or Polyester

The special anti-slip underside ensures perfect stability on every surface, be it glass, acrylate, card, linoleum, rubber or anything else for that matter; the ruler remains perfectly still during cutting. The ideal tool for large colour prints and the like. The anti-slip foam layer prevents the ruler from coming in to contact with your work preventing it from damage when the ruler is slid around. Very handy!

Cut window film or glass

Cut plastic

Available in 4 different lengths:

3M Knifeless Tape -Finish Line

3,5 mm width. Use for most wrap applications. Conformable around bumpers, doorhandles, mirrors, etc.

350-206

price per roll

350-207

3M Knifeless Tape -Bridge Line

12,7 mm width. For use between wide gaps like between doors, seams and rubber seals.

350-207

price per roll

350-208

3M Knifeless Tape -Design Line

Allows stretching, follows contours and turns easily in any direction. Excellent for creating designs & stripes with no extra steps required to achieve a perfect cut.

350-208

price per roll

350-209

3M Knifeless Tape -Perforated Line

6,35 mm width. Use with perforated window film for perfect easy cuts every time. After trimmed leaves 3,2 mm gap to apply seal tape.

350-209

price per roll

How does it work?

- 1 Apply the tape to where the film needs to be cut. Allow the tape to run 10cm past the finished film application line.

Apply the film as normal. Apply the film firmly until the edges of the **KnifelessTape** are visible through the applied film.
- 2 Now grasp the 10cm excess **Knifeless Tape**, pull the tape back on itself and lie the loosened tape along the remaining tape with the adhesive layer exposed. Place your thumb on the fold where the **KnifelessTape** is still stuck and snap the tape in such a way that the fine cutting filament appears through the tape.
- 3 Now pull the wire in the direction of the start of the film application while still holding your thumb on the edge of the film so that the filament can start the cut without the film becoming loose or damaged. This is best achieved with a quick a firm tug in the direction of the film.

Now that the cutting filament is exposed through the first part of the film, simply pull the rest of the cutting filament through the remaining film. This should leave a perfect cut in the film.
- 3 Remove the excess tape from the side that needed cutting. Remove the remaining tape from beneath the film. The edges will probably appear slightly 'crinkled', however this is easily rectified: Just heat up the edges slightly with a heat gun and simply squeegee flat. Done!

SQUEEGEE GRINDER

-is your squeegee burred?

-is your squeegee no longer straight and smooth due to wear and tear?

A squeegee often is a personal favorite and an applier will always carry it with him. But what can you do when this particular squeegee has worn out so much, it's round and full of burrs? Keep it! Our Squeegee Sharpener is the solution to your problem! This smart tool has a small knife in its groove, fully smoothening the squeegee when pulled through. Smart and simple!

350-210 price per piece

KEEPIN' IT SCRATCH-FREE AND SHINY

Wrapping pros all over the world use them: felt tips or sleeves that help your squeegee slide smoothly, called "buffers". But what is a good solution when installing high gloss films? And what about chrome and mirror films? Scratches do happen. SOTT has the solution: the WrapEdge, made of soft, structureless alcantara. Available in 4 types. These "buffers" do exactly what every installer and wrapper wants, because each type of WrapEdge has a preferred application.

HIGH GLOSS PVC FILM

Many installers have experienced that squeegeeing high gloss films (especially dark colours) causes scratches.

WrapEdge helps to avoid that! Because the middle layer absorbs and retains moisture, you can wet it with some soapy water and presto! the world's best squeegee is a fact. Your squeegee suddenly slides perfectly over the vinyl while the pressure is evenly distributed and the film is superbly applied with no issues whatsoever.

MIRROR FILMS?

Chrome film, polyester film or mirrored film - they all have one thing in common: they easily scratch when you install them. Wouldn't it be nice if you could simply squeegee them down and not have to worry about scratching?

VARIOUS THICKNESSES

The WrapEdge buffers have a sponge middle layer that serves **3 functions**:

1: It holds moisture so it can contain the soapy water for wet squeegeeing. **2:** Wet installing of window film becomes a breeze, because the sponge layer absorbs the squeezed-out moisture at the edge. **3:** The thickness of this layer ensures an even pressure distribution when squeegeeing and flawlessly follows the channels and other recesses of the vehicle body parts when the film is pushed in.

WrapEdge

The WrapEdge buffers are available in 4 different types, each one for a specific application. Check the back for more information.

WrapEdge™

The 4 different WrapEdge buffers are all made of high-quality, structure-free alcantara. The difference mainly lies in the moisture-absorbing middle layers, which perfectly serve as a moisture reservoir to prevent scratching when wet squeegeeing. The thicknesses differ from type to type. The special adhesive on the back is moisture-resistant.

WrapEdge-00

Thin and strong alcantara. Spreads the squeegeeing pressure evenly. Can be moistened for an even better result. Contains no sponge layer.

The buffers are slightly larger than a standard squeegee, so the squeegee edges don't scratch.

Available in sets of 18, pre-cut in 3 sheets.

WrapEdge-01

Sturdy alcantara with a 1 mm sponge layer. Spreads the squeegeeing pressure ideally. Extremely suitable for chrome, high gloss, and polyester films.

The added 1mm sponge layer makes the squeegee's edge rounder and distributes the pressure over its full width. If necessary, wet the buffer to prevent scratches.

Available in sets of 12, pre-cut in 2 sheets.

WrapEdge-02

Sturdy alcantara with a 2 mm sponge layer. Spreads the squeegeeing pressure ideally. Extremely suitable for chrome, high gloss, and polyester films.

The added 2mm sponge layer makes the squeegee edge thicker and rounder and distributes the pressure over its full width. If necessary, wet the buffer to prevent scratches.

Available in sets of 12, pre-cut in 2 sheets.

WrapEdge-03

Sturdy alcantara with a 3 mm sponge layer. Perfect for wrapping in recesses and over swages as it can easily form the film in and over those areas.

The rounded edge of the squeegee is made thicker and is therefore very suitable for channels in company cars and vans. If necessary, wet the buffer to prevent scratches.

Available in sets of 12, pre-cut in 2 sheets.

APPLICATION GLOVE

- seamless - perfect fit - stretch

Seamless application glove, made of elastic material. The white material helps you to check whether the surface and/or the vinyl is clean. Because of the perfect fit it gives you the necessary feeling that you need during your application work, especially when you deal with curved surfaces on cars.

The glove is made of dust free material, so even touching the adhesive of the vinyl will not cause any residue to be left behind.

Perfect fit for applying you signs smoothly.

The clean and dust free fabric will help you to do professional and clean applications.

Completely seamless with a perfect fit.

Because of the perfect fit and thin material, you keep the necessary feeling in your fingertips.

150-101

SOTT

THE FINISHER

- Press down film in the smallest little areas
- 2 different spoon positions
- Coated metal spoons

- Press film underneath rubbers or window frames, in any hole or corner.
- Useful in all situations.

The Finisher

The Solution for all holes and tight corners

A must-have for every installer. This pen-style tool has two smooth metal spoons, each at a different angle. The spoons are flat to allow for film to be expertly pressed down in otherwise unreachable places. Think of corners of car hoods, between rear lights and headlights, around grilles and door handles.

150-101

Price per piece

THE SQUAD™

**Are there tools that can simplify film installation? Yes, definitely!
SOTT introduces a selection of handy tools that no installer should go without.**

A challenge for all film installers and sometimes (almost) impossible: placing and pressing down adhesive film into small corners, gaps and holes. Wouldn't it be great if there was a tool for that! Oh yes, SOTT sells it. A pair of elongated squeegees that work together as a team to tackle any job. Here they are: The Squad.

These specially shaped squeegees are designed to apply any type of film in hard-to-reach places. Whether it's for wrap film, window film or interior film, thanks to their various special tips these tools can literally be used anywhere and in any situation.

They are made of durable plastic so that they will not break, fray, buckle or curl easily. Several of the tips have sharp flat edges, to make it easier to push them into the smallest gaps. Despite this your film will not be damaged because the tip material is smooth and shows no burrs.

In short, a must-have for every installer who relies on fast and efficient work methods. Supplied as a set in its own case.

• Zie de achterzijde voor uitleg omtrent de toepassingen.

150-088 The Squad Price per set

THE SQUAD™

ALL THE ADVANTAGES

The smooth semicircular curved shape allows the installer to press down adhesive films behind seams and edges. Ideal for spots that normally would be out of reach.

The curved tip tapers off and is ideal for pushing film into corners and giving just that little bit of extra pressure to the rear side of edges, panels, doors etc.

The Crawler

Due to its smooth tapered shape, it is ideal for pushing all kinds of film into any conceivable shape without damaging it.

The Factotum-II

The Factotum II saw some improvements over version I. The tip tapers off and has a sharper edge. It is stiff, yet flexible. This allows a lot of force to be applied when pushing film into the smallest of channels and creases, but it won't break.

The tapered tail is quite stiff, yet flexible enough to push rubbers away from windows and other vehicle body parts. Because it is tapered and very smooth, it is a great tool for positioning window films before the water is squeegeed out from behind it.

This is useful too: use the rounded tip for scraping off adhesive and small pieces when removing film.

150-075

SpeedWing Lime 11cm -Hard

- one side flat
- one side curved

The curved edge is designed to encourage a finger or bubble to disperse outward which reduces the chances of a crease.

-Designed for installation behind brake lights -soft and flexible
-Softer than the yellow version

You know the problem: that third brake light at the bottom-center of the back window. This special tool is designed to make installing window film around the third brake light easier. It pushes out moisture -and keeps it out with pressure that holds down the edges behind that bothersome third brake light.

It has an arched, curved body that gets behind the brake light to apply the constant pressure required to keep moisture from seeping back, thus allowing the adhesive to grab.

Designed with two holes in the body of the tool for a better grip.

150-022 price per piece

150-023

Tail Fin Yellow -Medium

-Designed for installation behind brake lights -soft and flexible
-Stiffer than the green version

SOTT

DUNLOP SQUEEGEE

Super Flexible

- entirely of plastic
- flexible but sturdy arm
- width 28cm (11")
- perfect for mounting etch films and window films on flat glass

Perfect squeegee for wet mounting of self-adhesive vinyl and window film on flat glass. The arm and handle are very sturdy and strong but the squeegee blade is quite flexible.

150-052

Price per piece

150-053

SOTT

THE SQUEEZZEEZZ

- entirely of flexible plastic
- width 23cm (9")

The Curved One

Very flexible, bendable squeegee made entirely of plastic. Ideal for installing window film on curved rear windows of coupe-style car models.

Notice the shape: the rubber strip is curved. As a result, it adapts to the shape of any window effortlessly.

150-053

Price per piece

SOFTLINE TURBO SQUEEGEES

Perfect squeegee made of PU. The PU edge is firm yet very soft when used during wet application. It follows every contour of the surface you're working on, squeezing out water from between the film and the surface. Perfect for the first squeezes when positioning the film, followed by the more stronger BlueMax squeegee (150-007) or The Orange Crush Squeegees (150-050).

150-001

SOFTLINE TURBO SQUEEGEE 48cm

The plastic tube provides good grip. The PU edge is firm yet very soft when used during wet application. It follows every contour of the surface you're working on. Perfect for the first squeezes when positioning the film. Size: 48cm.

150-001 price per piece

150-002

SOFTLINE TURBO SQUEEGEE 24cm

Same type of squeegee as the 150-001, yet 24cm wide.

150-002 price per piece

150-003

SOFTLINE TURBO SQUEEGEE 14cm

Same type of squeegee as 150-001, 14 cm wide and specially shaped for squeezing in window frames and difficult corners.

150-003 price per piece

150-004

SOFTLINE TURBO SQUEEGEE 9cm

Same type of squeegee as 150-001, 9 cm wide and specially shaped for squeezing in window frames and difficult corners.

150-004 price per piece

150-007

THE BLUE MAX (shaped)

-soft but resilient

The Blue Max is the ultimate squeegee for wet applications, since no other squeegee can rival it for removing moisture under the film. Perfectly use for thick and stiff films, like safety films, solar windowfilms and laminated digital print films.

Perfectly combine with the following grips: 150-014, 150-017, 150-042, 150-042 L

150-007 price per piece

150-012

THE CLEAR MAX (shaped)

-Softer than the Blue Max, but better for the rear windows.

The material used for the Clear Max is softer and so moves the moisture from beneath the film much more efficiently; especially when the surface is slightly uneven as with rear windscreen demisters or dot matrix raster.

Perfectly combine with the following grips: 150-014, 150-017, 150-042, 150-042 L

150-012 price per piece

150-050

THE ORANGE CRUSH 130 (shaped)

-13cm (5") wide; harder than the Blue Max

The Orange Crush is a polyurethane squeegee that is slightly stiffer than the Blue Max. This makes it the perfect all-rounder. This squeegee is ideal for removing moisture from beneath a variety of films including window film, polyester laminate, thick safety films and even films covered in application tape.

Perfectly combine with the following grips: 150-014, 150-017, 150-042, 150-042 L

150-050 price per piece

150-051

THE ORANGE CRUSH 200 (shaped)

-20,5cm (8") wide; harder than the Blue Max

The Orange Crush 200 is the same as the 130 version, only wider, making it the ideal choice for larger areas of film.

Perfectly combine with the following grips:
150-014, 150-017, 150-042, 150-042 L, 150-043 L

150-051 price per piece

THE HYBRID

150-048: 13cm (5") wide

150-049: 20cm (8") wide

THE HYBRID -A multitalent: 2 squeegees in one

- A multitalent: 2 squeegees in one
- Blue side: medium hard, orange side: soft
- In 2 widths available

This unique polyurethane squeegee consists of two layers, each with a different hardness. The orange side is softer than the blue side. The squeegee angles on either side are different as well, giving you full control over the right amount of pressure during installation.

150-048 13cm (5") wide price per piece

150-049 20cm (8") wide price per piece

Perfectly combine with the following grips:
150-014, 150-017, 150-042, 150-042 L, 150-043 L

150-014

Example: PERFORMAX hand grip with squeegee

Suitable for use with the following squeegees: 150-007, 150-012, 150-050

PERFORMAX Hand Grip

-130mm (5") wide

Sturdy cast iron hand grip for use in conjunction with special soft squeegees. (see 'Soft Squeegees' section)

The Performax offers tremendous grip and allows extra pressure to be exerted on the squeegee during wet applications. Ideal for use on large areas of wet application such as self adhesive film on to acrylate and composite sheet materials, but especially suitable for window films and thick security film applications.

The Allen screws for attaching the squeegee are counter-sunk so they cannot damage your work.

150-014 PERFORMAX Hand Grip price per piece

150-042

Example: FUSION-8 hand grip with squeegee

Suitable for use with the following squeegees: 150-007, 150-012, 150-050

FUSION-5 Hand Grip

-130mm (5") wide; indestructible plastic

An exceptional hand grip, manufactured from high quality, unbreakable plastic for use with special squeegees. FUSION hand grips offer an improved and extended grip reducing fatigue from squeegee work during those long applications.

Extra comfort is provided by the anti-slip foam coating on the actual gripping area. The curved form of this special smooth plastic hand grip prevents it from coming in to contact with film when extra pressure is applied, so any risk of damage to your work is eliminated.

This is the ultimate hand grip for squeegees used for the wet application of film. Perfect for use with thick and hard films, such as security film and window film.

Also available in a wider 20cm (8") version (*Fusion-8*).

150-042 Fusion-5 Hand Grip price per piece

150-043

Example: FUSION-8 hand grip with squeegee

Suitable for use with the following squeegees: 150-051

FUSION-8 Hand Grip

-200mm (8") wide; indestructible plastic

An exceptional hand grip, extra wide, manufactured from high quality, unbreakable plastic for use with special squeegees. FUSION hand grips offer an improved and extended grip reducing fatigue from squeegee work during those long applications. Extra comfort is provided by the anti-slip foam coating on the actual gripping area.

The curved form of this special smooth plastic hand grip prevents it from coming in to contact with film when extra pressure is applied, so any risk of damage to your work is eliminated. This is the ultimate hand grip for squeegees used for the wet application of film.

Perfect for use with thick and hard foils, such as security film and window film.

Also available in a narrower 13cm (5") version (*Fusion-5*).

150-043 Fusion-8 Hand Grip price per piece

FUSION STRETCH

FUSION STRETCH HANDLE -extra long grip

- extra long grip: 40cm (16")
- available in 2 widths: 130mm (5") and 200mm (8")
- indestructible plastic

The Fusion Stretch Grip

Example: FUSION Stretch grip with squeegee

Unique squeegee holder as the standard Fusion-series, but with an extra long stainless steel grip. Because the grip is no less than 40cm (16") long, an enormous amount of pressure can be applied when squeegeeing window films. This makes installing less tedious: ideal for large windows.

The following polyurethane squeegees can be used in combination with these holders:
150-007 Blue Max, 150-050 Clear Max, 150-012 Orange Crush 130,
150-048 The Hybrid 130, 150-051 Orange Crush 200, 150-049 The Hybrid 200.

150-043 L Fusion-8 Stretch Handle 20 price per piece

300-RT01

UNGER WINDOW SQUEEGEE -professional version

-width: 35cm

Stainless window squeegee of the famous UNGER brand. The best tool there is for cleaning flat glass windows to prepare them for film application. Also very useful for wiping away most of the water after you have placed the wet film on the glass.

New rubbers are available too: **300-RT01-S**.

300-RT01 Window squeegee price per piece

300-RT01-S Rubber replacement strip price per piece

150-017

Unger Pro Hand grip

-130mm (5") wide

Unger metal hand grip. This hand grip was originally intended for use with squeegees used by window cleaners. This hand grip is now used by many film fitters for mounting soft squeegees. But the amount of grip and pressure that can be exerted cannot be compared with other hand grips such as FUSION and PERFORMAX. So, for extra pressure and a firm squeegee job, we recommend the hand grips listed above.

150-017 UngerPro hand grip price per piece

150-026

THE YELLOW QUICKFOOT

-Medium hard

Stiff, smooth plastic squeegee for applying automotive window films in hard to reach areas. This squeegee fits into a variety of differently angled corners, and its long narrow end is perfect for pushing back rubbers.

150-026 price per piece

150-180

Quickfoot Blue -Soft

-Flexible

When you need a stiff squeegee with a handle for jobs that require medium reach, Quick Foot is the perfect "in-between" tool. Quick Foot is slim and trim like Slim Foot, but has a shorter, unwrapped handle so it fits more easily in your tool apron. This economically priced hybrid gives you a range of flex rating options to meet a variety of applications.

150-180 price per piece

150-170

THE SLIMFOOT

- Squeegee for hard to reach areas
- 36cm long - 15cm wide

THE SLIMFOOT: Special thin, long squeegee, for example for use with flat rear windows, when squeezing is difficult.

150-170 price per piece

150-171

THE BIGFOOT

- Squeegee for hard to reach areas
- 39cm long - 16cm wide

The BIG BROTHER of the SLIMFOOT. This long squeegee is perfect for hard-to-reach areas, for example for use with flat rear windows, when squeezing is difficult.

150-171 price per piece

150-035

5-WAY TOOL

Tough Plastic ruler for easily cutting window film in edges and corners. Because of the unique design it is possible to cut in different angles. Designed for applying vinyl and window films on flat glass.

150-035 price per piece

150-020

Size: 39cm x 15cm

THE BULLDOZER I (car tinting applications)

- with one hand tied behind your back you will be able to:
- squeegee behind speakers, 3rd brake light, low-lying rear windscreens...
- no more scraped knuckles...

Specially designed plastic squeegee, extra large and extra wide. The design allows you to apply film firmly in those hard to reach areas. The squeegee adapts itself perfectly to the curve of the window. The end of the blade is fitted with a rubber strip to remove the last, tiny drops of moisture.

150-020 price per piece

150-021

Size: 39cm x 15cm

THE BULLDOZER II (flat glass applications)

- with one hand tied behind your back you will be able to:
- squeegee behind radiators, desks, semi-exposed pipes and the like...
- no more stress...

Specially designed plastic squeegee, extra tall and extra wide. The design allows you to apply film firmly in those hard to reach areas. The squeegee adapts itself perfectly to the curve of the window. The end of the blade is fitted with a rubber strip to rinse off the last, tiny drops of moisture.

150-021 price per piece

150-008

THE CONQUERER Squeegee

Specially designed squeegee for the installation of windowfilm in hard to reach areas. Its ergonomic design is perfect for applying film in tight & sharp angled corners.

150-008 price per piece

150-046

Size: 38cm x 8cm

THE TITAN

-ultimate versatility

This special squeegee solves the two main problems experienced during the application of window film on to convex rear windscreens and side windows. **1:** Its long, sturdy but flexible form makes it the perfect squeegee for applying film to very deep and low-lying rear windscreens. **2:** The profile variations at the back of the squeegee allows it to work the window film in to corners and between the window seals in a number of different ways. Manufactured from sturdy, flexible and unbreakable plastic.

150-042 price per piece

SOTT

It's bigger, It's stronger, It's The GOLIATH!

All film installers and signmakers use them.

The mounting magnet. With larger pieces of vinyl, however, one magnet just isn't enough. We have something better for that task. An extra-strong magnet, with a special handle. It's a monster! We call it The Goliath!

Super strong and NO mistake

STANDARD
MOUNTING MAGNET

THE GOLIATH

Mounting Magnets are now indispensable when installing vinyl and other films. But we missed a satisfying solution for holding up large sheets of film with just one tool - frustrating! That is why we designed this special mounting magnet assembly and while we were at it made it multifunctional as well. Specially designed for the true installer who appreciates efficiency and convenience while he works.

More than 24kg of pull!

Replaces 4 ordinary magnets

Multifunctional!

The 5 advantages of The Goliath

1

EXTRA STRONG: MORE THAN 24kg OF PULL!

Nothing is more annoying than magnets and film fall down whilst positioning. The standard magnets often turn out to have too low a magnetic force, which means you end up using several magnets to do the job. Thanks to The Goliath this is a thing of the past. The base contains **6 Neodymium magnets** that together develop a minimum of 24kg pulling force. The Goliath is so strong that one of them can hold up a 1,52m x 5m of film. So just clamp it down with The Goliath and start installing!

2

LIGHT GREY BASE FOR BETTER DIRT CONTROL

Avoid stains caused by your tool. The Goliath has a light grey rubber base that shows dirt well. By cleaning it regularly you can be sure that the magnet won't leave any dirt traces.

3

ROUNDED HANDLE: PREVENTS DAMAGE TO THE FILM

Often during installing the upper part of the film drops over the magnets, causing ugly kinks or folds in the film. The Goliath however, has a rounded top to prevent this.

4

10mm (0.4") HOLE FOR ADDITIONAL ACCESSORIES

Toward the top of the handle there is a 0.4" (10mm) hole. This creates interesting possibilities for The Goliath. Available accessories are simply stuck into the hole, creating a whole new functionality for it.

5

ATTACHMENTS for THE GOLIATH

There are 2 different attachments available that add a completely new function to The Goliath. In an instant create a third hand when working with the hot air gun or create a special rack for your squeegees and fluids*.

HEAT GUN HOLDER: Ideal for high installation areas

Don't you find it annoying to continually have to put your hot air gun away and pick it up again whilst installing? Make it easy on yourself by using the special holder. Simply insert the holder in the holes of The Goliath and stick it anywhere on the car body. Ideal if you are standing on a ladder working on the roof.

**Note: these accessories are individual orders.*

**Note: these accessories require two Goliath magnets.*

DISTANCE BRACKET: Keep your tools off the ground.

Use The Goliath in combination with the special bracket to create a convenient dispenser for hanging your towels or bottles on, so they don't stand on the floor. Or attach your rubbish bag to the bracket and keep your workspace clean.

Price per piece

150-MM884 Heat gun Holder

150-MM885 Distance Bracket

Forget all standard magnets...

150-MM882

INTRODUCING the SOTT Magnet

Just about every signmaker, carwraper and film installer uses them.

Mounting magnets. This handy tool keeps the sheet of film on the car body during positioning and installation. There are many types and shapes available, always with some kind of problem: too sharp, handle too small, the rubber rubs off or simply not powerful enough. Here is the SOLUTION:

A mounting magnet designed by people who really gave it some thought and that combines many advantages into one. Forget about the rest. From now you'll only want to use the SOTT mounting magnet.

**Note: Order quantity per piece*

THE MUSCLE MAN: More than 7,5kg of PULL!

A common complaint of film installers is that mounting magnets often lack just that little extra in force. The SOTT mounting magnet solves that issue. The base contains **6 Neodymium magnets** that combine into a magnetic force of over 7.5 kg.

As a result, fewer magnets are needed in one place to keep the sheet in place, which won't fall readily off the car.

LIGHT GREY BASE FOR BETTER DIRT CONTROL

Avoid causing stains with your tool. The Magnetor has a light grey rubber base that clearly shows dirt settling on it. By cleaning it regularly you can be sure that the magnet won't leave any traces of dirt.

ROUNDED HANDLE: PREVENTS DAMAGE TO THE FILM

Often during installing the upper part of the sheet drops over the handles of the magnets, causing ugly kinks or folds in the film at the spots where it touches the handle. SOTT mounting magnets, however, has a rounded top to prevent this from happening.

150-MM882 SOTT Mounting Magnet

Now available individually and per 5 in a box.

150-MM882

Price per set

150-MM884

Important:

Note: The SOTT Heat gun Holder only works with two magnets type 150-MM883 The Goliath.

**150-MM883
The Goliath**

SOTT

SOTT HEAT GUN HOLDER

-special holder for your hot air gun - always at the ready

Simply use the special attachments for the big SOTT mounting magnet 150-MM883 The Goliath.

This metal bar is inserted into the holes of the magnet handles, one on each side and presto! you have a real holder for your heat gun. Because the body is metal there won't be problems with the hot nozzle of the gun, which is perfectly protected in the round tube. From now on, no more trouble with laying down your hot air gun or finding it again.

IDEAL FOR INSTALLING IN HIGH PLACES

Always difficult: installing film and using a hot air gun on a roof or high on the side of a vehicle. Where to put the heat gun? No more bending, picking up, heating the film, carefully putting away, applying the film, etc.

That is over! From now on you won't have this problem any more. Just place the holder and you can apply, heat up, stretch, apply, heat up, stretch, etc. much faster.

Product information:

The SOTT Heat Gun Holder is made of durable black passivated metal so it's corrosion-protected.

Please check PAGE 25 for more information.

SOTT

SOTT DISPENSER

- your 3rd hand during installation

Materials and tools often clutter up the space around the vehicle during installation. What could be nicer than a handy bracket to hang your cloths and spray bottles?

Installers often find they just haven't got enough hands for everything. A third hand would be so welcome. We have the solution for both problems.

CLEAN AND ORGANIZED WORK

Workshops usually look like this: rags and degreaser spray bottles everywhere and installers running around cars looking for them. Simply use the SOTT dispenser to keep all the articles off the floor, so that everything stays clean - plus you have everything within reach.

With a length of 2 feet it is the ideal bar to stretch the vinyl before you start wrapping, say, a mirror.*

Hang your cloths, spray bottles, etc. on the SOTT Dispenser and your tools will stay clean and be at your fingertips.

*YOUR 3RD HAND WHILST PRE-STRETCHING

The newest method to wrap small round shapes such as a door handles, antenna bases or mirrors, is to pre-stretch the film to stretch and then, during the installation, to heat-shrink it again. The SOTT Dispenser is your perfect assistant! Attach the film to the bar and you can heat and stretch it as much you like.

Product information:

The SOTT Heat Gun Holder is made of durable black passivated metal so it's corrosion-protected.

Simply Heat Up Corners and Fixate them together

The CornerSealer

Are there tools that can simplify film installation? Yes, definitely! SOTT introduces a selection of handy tools that no installer should go without.

Have you ever had small creases pop up at the corners of a wrap? Or small overlaps that lose their adhesion?

This practical tool is intended for releasing the tension off installed film edges around corners. The **CornerSealer** allows you to melt small creases or curly film edges and close or flatten them.

Installation

Perfect for:

- **fixating the edges of wrapped film around corners**
- **melting together small film overlaps**

Within seconds, the flat head gets hot enough to melt the film.

Simply push the hot flat head against the crease or overlap and 'melt' the film(s) together and/or in place.

This effectively fixes the edge of the film until it is tension-free in its new shape.

The flat head allows you to melt small creases or curly film edges and close or flatten them.

HOW TO USE:

- Make sure film is clean and degreased
- Activate the device to preheat the flat head. This takes about 10-15 seconds (preheating time increases with deteriorating batteries). **ATTENTION!** Head can get hot!
- Avoid skin contact to prevent injury
- Place the flat head against the film area and push down firmly
- Avoid overheating! 1-3 seconds of pressing is usually sufficient

ADDITIONAL INFORMATION

- The enormous heat produced by the **CornerSealer** drains batteries fast - make sure you carry sufficient replacement batteries
- First test the device on a small area out of sight, to assess its effect
- The heat resistance of films varies. Keep this in mind to prevent damaging the film by overheating
- In any case avoid contact with the head when still hot after use
- Do not use the **CornerSealer** for other applications than intended
- Do not use the **CornerSealer** longer than 5 minutes in one session
- Use alkaline batteries (not rechargeable)

ABS housing

Pocket-size

Works on 2 alkaline batteries
(not included)

400-IR02 The CornerSealer Price per piece

Post-heating on the right temperature?

Testing is Knowing!

Heat-setting the film after working it into channels and recesses is a necessity. Whether this is done with a hot air gun or torch, one question remains: how do you know if the film has acquired the right temperature?

400-IR02
SOTT Infrared Meter

The SOTT Infrared Meter measures it for you. Fast and simple. You simply aim the laser at the object you are heating up, and the gauge will immediately indicate the current temperature. Added to that you can keep the last temperature reading by releasing the front button. An ideal and indispensable tool for any signmaker or car wrapper who needs to know whether the right temperature of the film has been reached. Includes a 9 volt battery.

3 ADDITIONAL FUNCTION BUTTONS

Light button for display illumination.

Set to Celsius or Fahrenheit.

The laser pointer must be turned on and off manually.

TECHNICAL INFORMATION::

Temperature range:	-50~380°C (-58~716°F)	Service temperature:	0~40°C (32~104°F)
Accuracy:	1.5% (1.5°C) (2.5°F)	Service humidity:	10~95% RH
Response time:	500 ms	Storage temperature:	-20~60°C (-4~140°F)
Spectral response:	8-14 um	Battery life:	22 hr (without laser), 12 hr (with laser)

INCLUDED:
9 Volt battery

SIEVERT®

CYCLONE GAS TORCH -with 13mm fine burner

- reshaping or heat-setting is faster and has better results
- heat-set the film in those awkward places without heating the adhesive layer and substrate.

High quality gas burner - Sievert - Made in Sweden. Especially intended for working film and heat-setting in channels*. This burner produces tremendous heat allowing the correct film temperature to be achieved in a fraction of the time when compared with using a heat gun and a temperature gauge.

The main disadvantage with a heat gun (paint remover) is that it also heats both the bodywork and the adhesive layer. This is highly undesirable as this is also the removal temperature.

In short, a burner is the best solution for heat-setting film to all of those awkward areas.

Flame temperature: 1,925°C!!!

The tip of the blue flame reaches 1,925°C (3,500°F) and releases heat instantly. This is in direct contrast with a heat gun that supplies heat via an air stream.

The burner is moved quickly over the film surface, so it only heats the upper layer. The lower layer and the adhesive layer remain unaffected by the heat and so do not melt. The film itself is heated to a casting temperature (more than 205°C) in a fraction of a second, but cools instantly when the burner is removed.

The gas cartridge is replaced in an instant

The 300 ml cartridge makes the burner even more compact

The gas cartridges can be ordered separately.

ADVANTAGES:

- small flame: 13mm
- click-on-click-off
- electronic ignition
- no electrical power required
- extremely safe in use
- highly economical; 80 cars per cartridge
- lightweight system

400-BB-2235 Cyclone burner starter's kit

Supplied in a box with a 600mm cartridge.

price per piece

400-BB-8708

INFRARED NOZZLE -no air displacement

- does not blow hot air
- 1700w of direct radiant heat

Special attachment for the SIEVERT Cyclone gas burner. This attachment is special because it gives instant radiant heat from the flame inside it, without any blowing or air displacement. This lack of blowing ensures that your film does not get blown against bodywork as is often the case with hot air guns, or that surrounding areas of film are subjected to unnecessary heat. This infrared attachment provides instant radiant heat without affecting the flow of surrounding air. Manufactured from durable metal.

The flame from the burner is safely encased in the attachment so it cannot cause fires.

Solid construction in durable metal.

Size: 6mm x 66m

SOTT

SNIJ- & CONTOURTAPE -6mm

- define working lines* on any vehicle
- position lettering along a predetermined line
- create a flexible ruler for cutting purposes

This 6mm (.25") plastic tape is a revelation for every fitter. Easy to stretch and shape, does not leave adhesive residue. Quite thick, so doesn't tear or break easily. Cutting and Contour Tape is ideal for:

Defining working lines:

Define working lines on curved or wedge shaped cars. This will create a fixed working line that will follow the form of the car. Use this line as a reference for positioning your sign to ensure that it is visually correct.

Defining working lines:

Defining simple working lines before starting the application of any lettering will enable the correct layout of text and logos. Tip: use fixed reference points, such as the corners and edges of doors and panels. This will simplify the layout of the opposite side of a vehicle as well as making any future repairs much more straightforward.

Establish cutting lines:

If film needs to be cut to follow a desired form then Cutting and Contour Tape is the ideal solution. First apply the film, use the tape to create the desired form, and then simply cut carefully along the tape. The red and blue panel shown on the photo can be cut entirely free-hand. The top of the full colour print that runs away slightly at the top can also be cut perfectly using the Cutting and Contour Tape.

* A working line is an invisible contour reference line running horizontally over the length of the vehicle. Some cars already have a working line added during the forming of the bodywork. However, this is becoming less common in the more recent car models.

350-205

Size: 50mm x 50m

APPLICATION AND POSITIONING TAPE -50mm

Do you need to layout text and large prints before final application? This industrial class tape is a hefty 5cm (2") wide, has strong adhesion, but leaves no adhesive residue, even after several weeks. Not affected by water.

An ever-increasing number of bodywork components are being manufactured from composite materials. This is why you need Application and Positioning Tape.

This may also be of interest:

Application Magnets. Big and standard versions: 150-MM882 and 883

SOTT

SOTT WRAP TWEEZERS

Handy tools for easy installation in hard to reach places

Win the fight with small corners and seams

Each car wrapper and film installer knows: pushing vinyl into small corners and cutting or wrapping around hard to reach areas can be quite a fight. Specially designed for those tricky jobs are SOTT WRAP TWEEZERS.

3 different types of tweezers, each with its own purpose. Now you master every little part on the car. Made of stainless steel.

WRAP TWEEZER-I

- Flat round nose
- Pulls the vinyl without destroying it

The stainless steel Wrap Tweezer-I has a special flat round nose that can hold the vinyl without the risk of tearing it while pulling it around corners.

Cut the vinyl to size, heat it up and guide the vinyl around corners using the rounded tips. You're done.

350-311

price per piece

WRAP TWEEZER-II

- Curved end, with point
- Extra thin and precise

Stainless steel tweezers with curved ends. Both points are sharp and fit well together so that vinyl can be easily picked up within cracks, seams, headlights and taillights, etc.

Whenever there isn't anything else that can be used to get the vinyl in deep crevices of the car, the Wrap Tweezer-II is the solution.

350-310

price per piece

SOTT TWEEZER

- Round shape, flat inner surface
- Sharp point

This coated pair of tweezers has a sharp pointed nose that curves on the outside while being flat on the inside.

Ideal because now you can keep your grip when handling the vinyl while the outside, due to its curved shape, doesn't stick to the vinyl.

350-201

400-010

FILM SQUEEGEE-I

-easily apply film in the most awkward of places

A handy tool for every professional fitter. For both car wrapping and window film applications. Using this thin smooth plastic spatula, film can be worked in to the smallest corner and the narrowest of gaps without fear of damaging the film. Film can now easily be applied to the bumper seams, rear lights or roof rubbers.

The special slender shape enables the application of film in to all manner of seams and joints.

400-010

price per piece

400-009

FILM SQUEEGEE-II

-guide film between window and door seals, push in to joints

Film looks at its best when applied under the seals avoiding unsightly gaps. This handy tool is ideal for lifting the seals so that the film can easily be applied underneath. The Film Squeegee-2 is made of smooth plastic and is thin enough to avoid the seals being opened too much or getting damaged. This tool makes the application of film under door trims, window and roof seals a breeze.

The slender form of this tool enables seals to be lifted effortlessly.

400-009

price per piece

400-001

NYLON PUSHSTICK

Sturdy plastic spatula for pushing back or easing of rubbers around headlights and roof trims when applying film. Can also be used for positioning film in hard to access areas.

400-001

price per piece

400-002

DOORGASKET PULLER

Easy tool for tinting of cars, to get the door rubbers in their proper place again, when they were pushed down while tinting the window.

400-002

price per piece

400-003

THE EDGE

Stiff and smooth big squeegee to push back the rubbers in the door of cars. Makes tinting the windows of cars under the rubbers much easier.

400-003

400-012

FILM OPAQUER -fine tip

-Damaged Film? Just repair it!

-waterproof, black opaque, sticks perfectly on pvc, plastics, glass, etc.

For use with window film: Opaque black ink is great for repairing window film. Just touch up the 'open' area and from the outside the damaged area has disappeared.

For use with dark printed film: apply black to the edge of the film; this looks much better than the normal white edge.

400-012 price per piece

400-013

FILM OPAQUER -wide tip

Same as 400-012 but with a broader tip.

400-013 price per piece

400-008

CHINA MARKER -for films

White wax pencil, for marking on films, glass, carpaints, etc. Easily wipe your mark away with water and a cloth.

400-008 price per piece

400-007

SEAL-IT PEN

Here's a fast, simple answer to your edge sealing problems that require edge protection. The SEAL-IT PEN contains brand 4005 UV blocker acrylic clear, for a fast drying (15 minutes), long lasting edge seal. SEAL-IT PEN is compatible with all type of films, simply follow the instructions that are included with each SEAL-IT PEN for your specific application.

400-007 price per piece

350-202

WEEDING TOOL

-special domed point

This clever, pen-like gadget has a rounded tip, which makes it easier to peel films without damaging the liner or backing paper.

350-202 price per piece

STANLEY MAX

STANLEY MAX Tape rule -professional

No more mistakes due to inaccurate measurements.
Never again will your tape rule retract – catching your fingers in the process...
No more delays because of collapsing or bending tape rules.

Discover the advantages of proper, high-quality measuring tools!

A valuable addition to your tool kit and a sheer relief: finally you will be able to easily measure height without the blade bending due to wind or standout. You will be able to measure the length of an advertising board, neon sign or trailer, knowing the blade will stay straight and won't fall off the edge.

These STANLEY MAX tape rules are ex-ceptionally sturdy, finally meeting the every-day needs of window film installers and signmakers.

270cm

- Mylar protective coating
- Bi-material case
- Blade allows for standout up to 270 cm without collapsing
- Rubber grip
- Belt clip
- Double top hook
- Hook grabs on side, top or bottom

HEX KEY (ALLEN WRENCH) SET - with ball head

-9 tools: 1,5 - 2 - 2,5 - 3 - 4 - 5 - 6 - 8 - 10 mm

- with ball head on one side
- high quality chrome vanadium
- plastic holder

An essential piece of equipment for each installer who regularly has to (dis)assemble car parts.

This 9-piece hex key (Allen wrench) set is used for removing or fastening allen-type hex bolts and screws. This hex key is a hexagonal bar bent in an L-shape. Depending on the available space and leverage required, use one end or the other. The tip of the long end has a ball head so that hex bolts can be fastened or removed at an angle. Comes in a handy plastic holder. Contains the following sizes: 1,5mm - 2mm - 2,5mm - 3mm - 4mm - 5mm - 6mm - 8mm - 10mm

350-101 price per piece

400-019

WORKSEAT -with gas lift

- An end to backache!
- For easy movement around the car while applying your signs.
- No more tools lying around!

This is extremely convenient: a gas-lift work stool with a tool tray and castor wheels. The soft, comfortable upholstery keeps you comfortably seated even during lengthy jobs. Underneath the seat, a ring has been fitted with which you can operate the gas lift, adjusting the height to your exact preference.

The tool tray consists of three compartments for the tools you're working with, separated by a ridge.

The castor wheels include bearings and are made of hard plastic, with full rubber, durable and easy-rolling tyres.

10 Reasons to use The Ultimate ToolBox of SOTT

Carry All You Need in 1 BOX

Ordinary toolboxes just don't hold all your tools and fluids. the specially designed SOTT Ultimate ToolBox now will! Bottles, knives, squeegees, you name it, The Ultimate ToolBox carries it for you!

Bigger = Better

Up to

200%

more space!

ToolBox: 400-018S

Ready to get to work?

SOTT

SOTT TOOLBOX

-Everything you need, carried in 1 toolbox

A standard toolbox can't contain all the tools you need during a carwrap job. As always, you just don't have not enough compartments for your special knives and squeegees, bottles will topple over and so on. But not anymore! Now you can have the SOTT ToolBox.

Bigger = Better
Up to **200%**
more space!

LARGER FORMAT: VOLUME 30 liter.

With a slightly bigger footprint of 52cm x 30cm the SOTT TOOLBOX has a capacity of 30 liters. So you will have everything you need right by your side.

22 ATTACH STRAPS

Along the inside of the TOOLBOX are 22 tool straps for you to store your tools. They are designed for quick access, just as everything about this tool box is!

QUICK ACCESS POCKETS ON THE FRONT

Knives and pens are easily accessible for use on the front of the box and there is space for your mobile phone as well.

18 COMPARTMENTS FOR SQUEEGEES etc.

As many as 18 compartments on both sides for your squeegees, blade holders and many other tools and materials.

2 BOTTLE HOLDERS

The SOTT TOOLBOX comes with two additional bottle holders that can be attached to the TOOLBOX with Velcro. Now you can take up to 4 (Spray-)Bottles along without them toppling over.

RULER HOLDERS

As many as 4 sturdy straps with Velcro hold your longer tools, such as cutting rulers.

STAINLESS BRACE WITH HANDLE

Comfortable to carry thanks to the strong stainless brace with handle.

TAPE MEASURE HOLDER

On the back there is a strong metal clip for your tape measure. Everything is designed for quick access.

SHOULDER STRAP

Standard supplied with shoulder strap that can be attached to the special braces on the box.

6 PLASTIC FEET

The box stands on 6 large plastic feet that avoid damage and soiling of the TOOLBOX when it sits on the floor and keeps it dry.

Ready to Face the Job?

SOTT

PROFESSIONAL TOOLBAG

-The most versatile toolbag available

Professional installers often find themselves doing acrobatic feats to get to their tools whilst working. SOTT wants to respond to the needs of installer. So SOTT designed a special ToolBag which fully meets the requirements of professional installers across Europe. Behold the outcome.

The HeavyDuty belt is not included. Please order this item separately.

STURDY PLASTIC STRAP

SOTT chose to use a sturdy, industrial-grade strap that doesn't bend or collapse when your TOOLBAG is filled with tools.

SQUEEGEE POCKETS FOR QUICK ACCESS

The TOOLBAG has 2 extra pockets with adjustable depths for squeegees that you want to grab without looking.

EXTRA MAGNETIC POCKET

On the front there is another magnetic pocket underneath the material to stick metal tools or screws. Ideal and very clever!

SPECIAL SHAPE

SOTT's TOOLBAG has one large compartment in the middle for gloves, wipes, etc. It has a special shape, so it doesn't bother you by wiggling between you and the vehicle. This reduces damage-prone situations.

MAGNETIC COMPARTMENTS

There are magnetic plates sown into the material to conveniently stick your installing magnets.

SPECIALY DESIGNED KNIFE COMPARTMENTS

8 knife compartments with custom depths of 8 and 10 cm to make sure your knives always peek out a little. This way you can grab and return them quickly.

SAFE TAPE MEASURE HOLDER

The tape measure holder is made of sturdy plastic to avoid inadvertent damage when you lean against a car.

'OLD BLADES' STORAGE COMPARTMENT

No more old dull blades lying around! Put them into the special section in the 120-OLFA AB10 blade box. This box is specially made for this purpose.

MOUNTING TAPE HOLDER

On the bottom of the TOOLBAG there is a belt with a quick release. Attach your mounting tape there to quickly grab it when you need it.

PROTECTED AGAINST DAMAGE

SOTT's TOOLBAG is especially made of industrial-grade textile material and has an elliptical shape to reduce the change of scratching the vehicle.

Get **MORE** from your **SOTT Toolbag**

Special tool bar provides additional benefits

The famous SOTT Toolbag already has many qualities. The many pockets and compartments and the well-thought-out layout make this tool bag very popular throughout Europe. But now we've added some qualities. Good news for Toolbag owners. Haven't used the Toolbag yet? Now there are no excuses any more.

LONG ANTICIPATED

Toolbag owners may have wondered what those two elongated loops on the front are for. Well, now the cat's out of the (tool)bag: they are designed for holding a metal bar that slides into them, so your Toolbag becomes even more universal and can carry even more tools.

This SOTT Toolbag bar is made of black passivated metal and is sized to allow for various tools to be hanging on it.

Make your Toolbag even more universal by sliding the metal bar into the special loops.

ROLLEPRO

-install film over rivets, in channels and on bricks in no time!

The well-known RollePro is the only tool that really works for installing film around rivets and applying wall films to brick or stone walls. The RollePro has a hard foam wheel that presses the film into and around curved or uneven surfaces. Install the film over the surface, warm it up and roll the RollePro over the shape or surface. Keep pressing firmly until the film has cooled off, then heatfix and you're done.

Warm up the film and roll RollePro simply over rivets channels, grooves or joints.

In this image you can see that the hard foam wheel easily takes the shape of the curved surface.

Even coarse bricks are no problem. The RollePro easily pushes the film into irregularities of stones, bricks and joints.

150-047

SOTT

ROLLER -heavy duty

-150mm (6") wide

-top-heavy version; with bearings

Professional roller mounted in ball bearings and intended for intensive use.

Top heavy means that the actual rubber roller is the heaviest part of the tool allowing extra pressure to be exerted during application procedures. This is especially evident during the application of large areas of film.

Less pressure needs to be applied as the roller does most of the work.

Ideal for:

- applying large areas of film before dry application.
- applying application tape.
- applying laminate.

The rubber roller is bearing mounted and so runs exceptionally true, offering highly efficient and effective rolling.

TOOLSTATION

J U S T D O N ' T F O R G E T Y O U R L U N C H B O X

400-020

TOOLSTATION

-All the tools right at your fingertips.

Robust rolling cabinet with solid rubber wheels to keep all your tools organized. Thanks to the unique design, taking tools along to a job on locations is simple, as well: the TOOL STATION consists of three separate toolkits. That gives you the option of taking just one, specially tailored tool kit along for small or less complicated jobs.

A special groove on the top prevents rulers, knives and pens from falling off.

Store your bigger tools easily in the separate compartment.

Keep spare blades and knives separate from used blades.

A separate drawer for special tools and spare squeegees.

The kits can be partitioned according to your specific preference. That allows you to organize all your knives, blades, squeegees, cleaning-cloths etc.

The TOOL STATION has a perfect work height (88cm), and is made of durable and flexible plastic that is less likely to break or tear. An indispensable item in every professional workshop.

The drawers have smooth rolling glides, making them easy to open and close.

Cleaning cloths, quart size bottles and spray cans can all be individually placed in the large, tilting, lower drawer.

The solid aluminum handle ensures your heavily packed TOOLSTATION can be rolled around with ease.

Stable positioning, thanks to the various plastic 'feet'.

Note: Due to the size and volume of this product there is the possibility of an additional freight charge. Check with your supplier on their shipping policy.

500-SRS162 163 cm price per piece

500-017

RFX APPLICATOR for application tapes

Troubled by air bubbles or wrinkles when applying application tape to your film? Just use the RFX applicator. This handy little tool is 30cm wide and totally removes any creases or air bubbles between your application tape and film.

500-017 price per piece

professional Roll Support

Simply and quickly slide the roll guide into the special position slots.

Perfectly finished endcaps smoothly slide into the position slots. This stabilizes the dispenser even more.

The dispenser comes complete with mounting brackets, screws and an Allen key. Just put it together and it's ready for use.

Corner brackets that can be mounted as needed so the dispenser "clamps" onto the table are included.

The two aluminium roller guides enable you to unroll your vinyl or application tape either from the top or the bottom.

The stable dispenser construction enables the perfect unrolling of wide film rolls, such as carwrap films, without any kinks or creases.

The roller guides are made from anodised aluminium with a metal profile along their entire length to prevent sagging

Rubber feet ensure it solidly sits on your table and they prevent damage. The dispenser can also be bolted to the table. A screw hole is provided for that purpose.

Has a perfect and safe finish thanks to its coated, solid metal build and rounded corners.

SPEEDCLIP

-no more unsightly curled up pieces of tape

It's always been a problem: securing your rolls of film after use. Usually they are just taped up, but this often means that when the tape is removed the film gets damaged. Not anymore!

This clip is made from a soft flexible plastic with a special finger recess allowing you to simply slide it along the roll without damaging the film. The clip then closes securely around the film holding the roll together.

Eliminates the chaos of unsightly taping

The Speed Clip ensures order and a clear view of your stock. It can be used on all types of film.

When the clip is removed, the film remains totally undamaged, but the Speed Clip does much more. Here are a few examples.

Handy finger grip

Flexible and self-closing

Rounded ends

Automatic spacing

Leaves no impression on the film

Suitable for window film

Can be used on thick rolls

Ideal for laminates

Space for logo or company name

Tip:

After intensive use Speed Clips may develop some "play". No problem. Just place the Speed Clip in some hot water, and after a short time it will return to its original shape.

SOTT

DE FILMCATCHER

- no more grimy film
- no more wrinkled film

Format: 77 x 59 x 33cm

Keeping an eye on film when printing or cutting has always been a problem. How many times has your film left the machine and ended up a completely crumpled mess on the floor?

No more stress when using film in a **PRINTER** or **CUTTING PLOTTER**

This need never happen again. Simply install the Film Catcher in front or behind your equipment and from then on the run of the film is perfectly controlled. The Film Catcher is a durable and sturdy chromed steel bar construction with a smooth finish. Friction between film, banners or canvas is kept to an absolute minimum.

No more wrinkles or creases.

The rounded construction ensures that the film flows smoothly through the machine before being neatly collected. Creases often caused by the pure speed of the cutter plotter and the film ending up on the floor as a result are prevented.

No more dust and dirt

Nothing is worse than film or print work ending up on the floor covered in dirt, as it can ruin the whole job. The Film Catcher prevents your film or print work from ever landing on the floor again. One less thing to worry about! No minimum order.

RESULT?

The curved construction of the Film Catcher ensures that the film flows smoothly and is kept away from the floor, preventing the film from becoming creased or dirty.

When a film is being cut it is pulled back and forth over the floor and dirt getting on to the film would normally be unavoidable.

Perfect for cutting plotters

The Film Catcher solves the crease and dirt problems at a stroke: Simply install and get cutting.

The ideal solution in front of and behind digital printers

Front installation: The Film Catcher is the ideal solution for those printers not fitted with an automatic roll-up system. The film is neatly collected as it is printed.

Rear installation: When print work is removed from the printer there is always the risk that the end of the film will trail along the floor. The Film Catcher simply catches the end of the film before it has the chance to hit the floor.

500-014 FilmCatcher price per piece

RAL Colour fan

RAL colours are the colour definitions of paint, lacquers and coatings and are used as the industry standard in architecture and construction throughout Europe.

750-RAL210

PANTONE® PLUS

RAL Colour fan -2012 edition

- a must for every architect, designer and sign maker.
- including 17 metallic colours and 6 fluorescent colours.

The official colour fan consisting of 210 standard RAL colours. All colour definitions of paint, lacquers and coatings as used in the construction industry available in one fan.

Every colour is accompanied by a RAL number, giving you all the information you need to make the correct colour choice.

SOTT

CAR SHAPES -black plastic

UNIQUE MARKETING PRODUCT: Modern plastic car molds for your showroom. Wrap them in any color you want.

Size: 13cm(5") x 30cm(12")

Showcase your vinyls in the perfect way

How can you demo your color selection in a beautiful and perfect way? Display swatches of vinyl? Only use a color chart?

We've got it for you: SOTT CARSHAPES

These black, plastic car shapes are hollow, lightweight and designed specifically for vinyl wrapping so their colors are shown in the best way possible. Your customer will get a better impression of how the vinyl looks on a curved shape instead of a small swatch out of a color collection.

MODERN SPORTY FORM

We are no longer living in the stone age. Since car wrapping is a modern trend the car shapes should be too! Therefore we have an unbranded sports car shape designed with edges and corners that will give the vinyl that extra radiance.

It's as if a real car has been wrapped.

WRAP IT IN YOUR COLORS

The car shapes are made of black plastic and can, be wrapped in any color you desire.

Create your own fleet of cars showcasing your most popular colors.

SOTT CARSHAPES come in a package of 10.

BEAUTIFUL LARGE SIZE

If you do something it should be done well. That is why SOTT CARSHAPES are a good size.

The effects of available colors, including metallic, matte and pearlescent must show up well. And that won't happen with a small mold, so we provide you with a sizable model.

SOTT CARSHAPES come in a 13cm(5") x 30cm(12") size.

750-301 SOTT CARSHAPES 10 per box

300-026

3M

SCOTCHBRITE SCRUB PAD -thin

-22,5 x 15,5 x 1cm

Pro quality scourer Thin edition. Works very well for the removal of tough dirt and little bumps on car and home windows. The sponge is less than half an inch thick and fits nicely on the 300-035 SCRUBBER, so you can reach far corners and other hard-to-reach spots.

Also useable on the:

SCRUBBER scrub pad squeegee 300-035

300-026

price per piece

300-027

3M

SCOTCHBRITE SCRUB PAD -thick

-25,5 x 12 x 2,5cm

Large scrub pad for glass cleaning. Easy to use because of its size. Useful for the thorough cleaning of the "dot matrix" on car windows.

300-027

price per piece

300-028

COPPER WIPES -for improved adhesion to the dot matrix

-soft and fine structure

Special copper wipes for cleaning the dot matrix, often seen around the edge of windscreens. It is often quite difficult to get film to adhere between the dots. These copper wipes will polish the raster slightly and this will improve adhesion. Copper wipes should only be used on the dot matrix.

CAUTION: **NOT** useable on tempered glass

300-028

price per set

300-010

STRIP-IT EraserDisk

-fast removal of film and stickers

Removing vinyl of a car can be a difficult and time consuming job. Especially when the vinyl is old and tears easily. Or what to think of removing reflective vinyl. The solution is the Strip-It EraserDisk. Mount it in a drill and off you go for a quick job! It will not damage the car paint.

300-010

price per piece

300-030

CLEANING SQUEEGEE -for rubber strips in window frames

-10cm

Special squeegee for cleaning rubber strips in window frames. The squeegee material is tougher than normal squeegees which is more effective for removing the dirt with the water.

300-040

POLISHING PAPER -triple layer

-2 rolls -37cm (1'3") wide

Industrial grade triple layer highly absorbent polishing paper. This paper is extremely strong and will not disintegrate when saturated with water. Soft but strong. Indispensable in every workshop.

Useable for:

Roll dispenser 300-050

This high quality compactly rolled polishing paper is extremely soft and so will not scratch the substrate.

300-040

price per 2 rolls

300-023

Roll length: 36m (62 sheets)

LOWTACK TACK RAGS -on a roll

-removes all dust from any surface

-leaves no residue

Slightly adhesive wipe on a roll. Ideal for removing all dust from any surfaces to be worked on. Removes dust from prints before laminating. Removes dust from windows and bodywork prior to film application. Removes dust from metal surfaces before painting or spraying. The roll is 30cm (1'2") wide and each roll consists of individual sheets that can be pulled off as required.

One side is slightly adhesive. Leaves no residue.

LowTack tack rags on a roll are the perfect solution for removing dust from a variety of surfaces. Individual perforated sheets.

300-023

price per roll

300-022

TACK CLOTH DUST-FIX

-10 pack

Slightly sticky cloth. Perfect for removing dirt and dust of window frames, cars or any area which has to be dust and dirt free before applying signs. Will not leave any residue behind. Creates an anti-static surface.

300-022

price per pack

ULTRACLEAN

The perfect cloth for CLEANING and INSPECTION purposes

For cleaning:

- Print head stations
- Printer components
- Electrical components
- Acrylate
- Rigid foam
- Vulnerable surfaces
- Bisionyl
- Painted and un-painted cars
- Glass windows and facades
- Door seals and frames
- Windscreens, including the dot matrix

ULTRACLEAN dust-free, micro fibre cloths - dirt absorbing

- highly moisture absorbent, dust and lint free; won't tear
- ideal for cleaning joints and other nooks and crannies.
- indispensable for film fitters and car wrappers

Ultra Clean white polishing cloths, often called surgical cloths, are manufactured from a micro fibre material and are completely lint and dust free. Not one single fibre is released during polishing. This enables the perfect cleaning of any surface. Extremely high moisture absorbency.

The all-round professional

Ultra Clean is so versatile it can truly be called an all-round professional. It can be used for cleaning electrical components, printer heads on industrial printing equipment, cleaning and degreasing windows and windscreens before the application of film. Also ideal for cleaning acrylate and rigid foam sheets, as well as for cleaning cars and other vehicles before applying film.

Inspection cloth: Ideal!

These cloths are also highly suited for cleaning and degreasing hard to access areas such as in gaps and joints on cars and other vehicles.

Experience has taught us that these are critical places that are often overlooked during cleaning. That's just not possible when Ultra Clean cloths are used. If necessary, just wrap a cloth around one of our special squeegees. Apply a little SOTT Surface Cleaner-II or T-800 degreaser to the cloth and get in to those nooks and crannies.

The cloth will absorb the dirt which will be visible on the cloth itself. Only when the cloth stops absorbing dirt is the surface clean enough for the application of film.

Ultra Clean cloths are available in packs of 10 or 100.

The amount of stubborn dirt that these cloths can still remove from joints, edges and gaps is simply amazing.

Good application is dependent on good adhesion. That goes without saying. Unfortunately, the cleaning and degreasing of the most critical areas get overlooked. These include joints, sills and gaps in bodywork. This is exactly where the film tends to come loose and curl.

Thorough cleaning of any joints or other awkward areas is essential for good film adhesion.

Simply take a squeegee and wrap a cloth around it. This will make the cleaning and degreasing of these hard-to-access areas a lot easier.

Ultra Clean cloths are ideal for checking to see if you have cleaned and degreased properly. These perfectly white cloths will soon show if any dirt is left in those awkward corners before you start application.

Tip:

Simply take a squeegee and wrap a cloth around it, this will allow you to clean and check all of those hard to access areas.

Recommended squeegees are:

300-035

Size: 38cm x 8cm

SCRUBBER scouring pad squeegee

Before film is applied the glass should be clean, degreased, and any hard specks of dust or dirt should be removed. However, it's not always easy to get to every part of the window. Perhaps the window is just too big, or perhaps you can't get behind a radiator or a cabinet, etc.

It's now a piece of cake! Just attach a scouring pad (see 300-026) to the Velcro on the SCRUBBER and use where necessary. The SCRUBBER is made of sturdy plastic allowing a good deal of pressure to be applied during cleaning.

The SCRUBBER is equipped with a strip of Velcro allowing the simple attachment of a scouring pad.

Use on this squeegee:

SCRAPERITE®

LIL' GRIPPER -scraper holder with polycarbonate scrapers

- polycarbonate scrapers will not scratch the substrate!
- for use on glass, car paints, composite sheet material, etc.

Removing adhesive residue and stubborn dirt can be quite a problem. Scouring, knives and metal scrapers can leave scratches.

This is where LIL' GRIPPER comes in! This small plastic holder uses a polycarbonate scraper in the shape of a razor blade, but it doesn't leave scratches. It can be used on car paints, Beauty Board, acrylate, rigid foam, wood, glass, etc.

A handy and indispensable scraper for every fitter that should be included in every tool bag, tool box and tool station. This will ensure that all cleaning and removal work will be effective and effortless. Scrapers can also be ordered separately.

The scraper in the LIL' GRIPPER has a sharp edge which will scrape off such things as adhesive residue with ease. TIP: scrape into one pile then remove with a polishing cloth. Repeat this procedure until all adhesive residue has been removed.

550-4007

SOTT

PRESSURE SPRAYER SOTT-HOZELOCK -7ltr

Large pressure sprayer (7 l) with a 5 litre liquid capacity. The large reservoir is easily pressurized, and the long hose and special trigger allow you to spray large surfaces prior to applying window film. In other words: you can simply carry on with the job in hand without having to walk back and forth to the tap. The wrist cramp that often results from holding the trigger of ordinary sprayer bottles is a thing of the past as well.

The spray head (A) can be set for the amount of spray mist needed, and the pressure can be adjusted by turning a button (B) next to the handle.

550-4007

550-110

THE SPRAYMASTER: The Ultimate Sprayer

-Is not affected by chemicals, degreasers, cleaners, adhesive removers, acids or aggressive liquids!

You've never seen a sprayer like this! The Spray Master releases a powerful mist instead of just beads of moisture. With a range of up to 3 metres! The Spray Master has an enormous spread of spray and covers the entire surface with a 'cloud'. This mist is much finer than the beads of moisture normally associated with other sprayers. The turbulent spraying action not only ensures that the surface is more efficiently sprayed, but the resulting mist also 'pulls' any dust that happens to be swirling around out of the ambient air.

The remaining liquid content is displayed on the side of the bottle.

The sprayer of the Spray Master is especially developed to supply a high yield of spray per pump action. The Spray Master is also resistant to aggressive substances.

TURBULENT MIST OF THE SPRAYMASTER

One of the biggest advantages of the Spray Master is the turbulent mist that it creates. This not only achieves a greater range of spray, but also removes dust particles from the atmosphere.

600-AA1400

SOTT

Bonding primer for water based car lacquers

ADHESIVE ACTIVATOR

- neutralises surfaces containing silicone
- harmless to the substrate
- 100ml

Always a pain: film that releases out of recesses and channels. This could be for a number of reasons, but one of the main causes is the actual car paint.

Water based car paint: the main cause of poor film adhesion.

Modern car paints contain silicone. This is obviously going to cause reduced surface adhesion. This is not normally a problem on flat body-work panels as neither the film nor the adhesive layer are under much tension. However, this tension is present in the recesses, channels and awkward corners with plastic bumpers for example. Optimal adhesion in these areas is of paramount importance. We all know what will happen to the film if the adhesion is not 100%.

Adhesive Activator AA-1400 appears to be the only product that successfully solves the problem of the poor adhesion of film to certain car paints. This industrial grade product is also used as a bonding agent for silicone sealants on a variety of substrates, the sealing of exposed security film edges on glass being a prime example. Available in cans of 500ml.

Due to the silicone content in modern car lacquers the adhesion of film can be far from optimal. Film under tension (especially in recesses) is bound to come loose and ultimately be returned for repair or renewal.

Application:

- 1) Thoroughly clean and degrease the application surface.
- 2) Using a cloth, apply a small amount of 600-AA-1400 to the substrate and wait for approx. 15-30 minutes (depending on humidity levels).
- 3) Then apply the film dry to the primer and voilà, a much improved adhesion to the substrate.
- 4) Finish by following the manufacturer's instructions.

600-AA1400-100 price per 100ml can

600-T800

SOTT

INDUSTRIAL DEGREASER/SILICONE CLEANER

- harmless for car paints
- removes silicone, grease, tar, oil, adhesive, paraffin and car importer's wax

A unique balanced product that was especially commissioned and developed some 20 years ago for use in the metal fabrication, automotive and advertising industries. Used extensively in the metal fabrication industry for degreasing prior to chroming or galvanizing. SO THIS IS A REAL DEGREASER!

T-800 Removes underbody coating, car importer's wax, paraffin, grease, silicone, etc. from all surfaces. It will even degrease through water. So having to dry a car before degreasing following a shower of rain is a thing of the past. Just apply with a cloth, wait a few minutes, and then just wipe over with a dry cotton cloth. T-800 needs to be removed with a cloth because it is somewhat slower than the volatile thinners. There's a good reason for this; for it to make grease molecules 'float' it has to first get under the molecules. So when the surface is wiped with a dry cloth, the end result is a perfectly degreased surface.

Suitable for car paints, metal, aluminium, Beauty Board, etc. Not suitable for use on rigid foam, polystyrene, etc.

T-800 gets under the grease molecules allowing them to 'float' and be removed by a dry cloth during the final wiping.

SURFACE CLEANER-II

- developed especially for the sign industry
- cleans car paint, metal, plastic, glass, bisonyl, etc, etc.
- biologically degradable

The fast
CLEANER
for all
surfaces

SOTT Surface Cleaner-II is the number one cleaner in the advertising industry. It meets all of the demands of the fitter; just spray Surface Cleaner-II on any surface. It loosens the dirt and you just remove it with a dry cloth. Surface Cleaner works fast and dries during polishing. No stripes, lines or dirt getting spread around. Just grab the SOTT Surface Cleaner-II, spray, wipe with a dry cloth, job done!

This universal cleaner certainly lives up to its name: it can clean any surface, removing dirt, grease, adhesive residue, etc ready for film application. This product has been developed in accordance with the latest European standards and legislation, and conforms to all current environmental requirements.

Paint, Plastic and Rubber

SurfaceCleaner-II is specially developed to, thoroughly and quickly, get a perfectly clean and grease-free surface on all types of vehicle substrates – paint, plastic and rubber. No whitening or burning of the clear coat. The mixture of special ingredients removes grease, grime, wax and adhesive residue at the molecular level.

Windows

Before you start installing window film, etch glass or vinyl lettering, you want to make sure the surface is completely clean. You'll be amazed at how effective and fast SurfaceCleaner-II does its job! It "seeps" under grease and dirt molecules that results in an easy wipe off and it evaporates quickly.

Signshop Workhorse

Plastic sheets, advertising signs or banner material? No worries. The multi-talent product called SurfaceCleaner-II is designed to be suitable for all types of applications.

Right-Off Adhesive Remover Goes Green!

For more than 20 years Sott's Right-Off has been the ultimate adhesive remover in Europe. Can we top that? Yes, we can!

Which is why we are introducing Right-Off 2.0, a new version that removes adhesive, glue and grease even more efficiently than version 1. It's easier and faster than before. It even removes the newest types of adhesives used by vinyl manufacturers. And - maybe most importantly - it is completely environment-friendly!

Simply spray it on, let it do its magic, and scrape the goo from the undamaged surface.

Right-Off 2.0 removes more types of adhesive than the old version. Even specially prime-coated adhesive systems are no match for Right-Off 2.0.

New Points of Sale

SOTT

The one and only real adhesive remover is renewed!

RIGHT-OFF

- removes adhesive residue in 2 minutes
- also removes tar, grease, chewing gum, paint, etc.
- harmless to all substrates

**SAFE and
LIGHTNING
FAST
adhesive
removal**

Right-Off will not only remove adhesive residue from self adhesive film and window film in less than 120 seconds, but also tar, grease, lubricants, chewing gum, etc. from carpets, upholstery and from plastic, Perspex, Beauty Board, rigid foam, metal, bisonyl, banners and painted surfaces. pH neutral, harmless to substrates and is not classed as a hazardous substance. Suitable for use on all types of film.

Application:

- 1) Apply Right-Off to the surface and wait for 60-90 seconds.
- 2) Using a Lil' Gripper scraper (300-006) scrape the resulting residue into one place.
- 3) Collect the residue using polishing paper (300-040). Repeat the procedure until all adhesive residue has been removed. Apply additional Right-Off as required
- 4) Thoroughly clean and degrease the treated surface with Surface Cleaner-II (600-SC02) before drying with a clean cloth.

SOTT

For large glass areas and windows in buildings

GLASSCLEANER

- for optimal cleaning and degreasing of glass to prepare it for the mounting of tinting film
- with a fresh and pleasant odour; no lingering nasty smells
- deep-cleans and dries fast without leaving stripes.

When large shop windows or windows in or on offices are to be covered with tinting film or vinyl, good bonding is of the utmost importance. No glass is perfectly smooth - the small surface irregularities are going to get dirty. New glass often has paraffin wax on the surface. Our GlassCleaner cleans and degreases glass thoroughly for installation of film.

Suitable for cleaning:

- large glass windows
- glass tables and doors
- acrylic, polycarbonate, etc.
- rigid foam
- objects that are coated with acrylic paint
- tables, doors, desks
- rabbets and frames

GlassCleaner draws the dirt out of the tiniest surface irregularities and lets it 'float', so it can be wiped away with a sponge, cloth or squeegee.

Harmless and with a pleasant odour

GlassCleaner is especially developed for regular use on large surfaces and lacks the typical offensive odour of alcohol- and ammonia-based cleaners. Also it is completely biologically de-gradable, non-corrosive and non-irritant. Good to know, next time you are spraying your cleaner around in a large office swarming with employees. There is no need to wear protective clothing or gloves.

Multifunctional!

GlassCleaner does more. Its formula makes it perfect as a general multi-functional cleaner for plastic boards, doors, table tops, desks, shelves, etc.

Instructions for use

Easy. Just spray the surface, if needed rub with a Scotchbrite Anti-Scratch scrub pad (300-025), then wipe away with a cloth or squeegee. Done!

Nothing more awkward than customers or staff complaining about the bad smell caused by cleaning the windows in a home or office. No more problems with the penetrating smell of ammonia or alcohol. GlassCleaner just smells fresh and does its job perfectly. And it can be used as interior cleaner!

Windows that reach down to the carpet or other valuable floor covering are popular and good-looking. But if your cleaner bleaches or tarnishes it, there will be trouble. GlassCleaner is your multi-functional cleaner that ONLY does what it SHOULD: it cleans the applied-on surface quickly, simply and without leaving any stripes.

For a more thorough cleaning Scotchbrite Non-Scratch scrub sponge are ideal.

SILICON / WAX REMOVER

Applying vinyl on a surface that is treated with auto wax like Meguiar's or other brands, can be a nuisance. The protective layer usually rejects the adhesive, which could result in less-than-pleasant phone calls from your customer. In this case use T-900. This strong silicone remover will dissolve the wax and degrease the surface for a perfect application job.

Please read the instructions carefully before use.

T-900 is the perfect product to remove all types of auto wax, often used on tuning- or high-end cars.

Glass cleaner for car windscreen window film application

DIRT-OFF

-as recommended by window film manufacturers

Window film manufacturers recommend Dirt-Off for cleaning windows before film application. Contains a highly diluted 'acid' for completely removing grease, oil and dirt from glass without damaging its surface.

Slightly acidic
CLEANER for
car windows

Dirt-Off is also ideal for use as a bonding aid to improve adhesion to the dot matrix raster and the rear windscreen demister.

The windows of second hand cars or cars that have been used for transporting a dog should be cleaned with Dirt-Off before applying window film.

The dot matrix raster around the edge of windscreens often present adhesion problems. Dirt-Off cleans these small areas thoroughly, thus ensuring improved adhesion.

Tip:

Raster Magic fills the openings and air bubbles surrounding the dot matrix raster for an even better end result.

GLASS CLEANER -automotive

-dries fast without leaving stripes
-highly suitable for mirrors, large windows, chrome
-removes finger marks

Getting glass absolutely clean and degreased without leaving stripes is not easy. Just try getting the inside of a car windscreen clean without leaving any stripes. What about mirrors, large windows or glass tables? Stripes are a nightmare.

FAST
cleaning and
DEGREASING
without STRIPES

Not a problem for Glass Cleaner. It works fast, and dries without leaving a hint of stripes.

Glass Cleaner is one of the most popular degreasers used by window film fitters. It's ideal for the thorough degreasing around the rear windscreen demister wires to ensure a good film adhesion.

Glass Cleaner is also the ideal cleaner for glass tables, mirrors, car lacquers and chromed car components or for just cleaning the film after application.

Cleaning the inside of a windscreen without leaving stripes has suddenly became easy thanks to Glass Cleaner.

Give the windows a clean with Glass Cleaner before handing over after that tinting job - it will look even more impressive.

Give domestic and industrial tinted windows a quick spray inside and out, and after a quick wipe they will be left stripe-free and have a greatly enhanced appearance.

Following application, a car wrap is usually covered in finger and squeegee marks. Just grab the Glass Cleaner, spray, wipe, job done!

Cleaner for (matt) car wrap film

CARWRAP FILM CLEANER

-the number one cleaner for gloss film

Car wrapping is really HOT at the moment, especially the matt colours. However, it won't have escaped the notice of car wrappers how much more difficult coloured matt films are to clean than coloured gloss. Why is this?

CLEANER for MATT and GLOSS car wrap film

It's the dimples in the film

Matt films are somewhat structured with minute 'dimples' that deflect light to give it the matt appearance. These dimples collect street grime that is difficult to remove with ordinary cleaners.

Road salt, exhaust vapour and brake dust

Normal street grime is nowhere near as stubborn as the road salt used during the winter, especially when it's combined with asphalt and rubber.

Add to that the steam from hot engines and the underside of cars that spreads to the sills and spoilers.

Not to mention the dust from disc brakes that escapes through the wheels and clings to side of the car. This is a common problem especially with sports and executive models. These models are much closer to the road and the dirt; they tend to be driven faster, so the brake shoes are subjected to more wear, etc.

What does Carwrap Cleaner actually do?

Carwrap Cleaner loosens the dirt between the dimples and 'suspends' it until it's removed from the surface.

The supplied car wrap sponges absorb the dirt preventing it from returning to the dimples. Then just rinse with clean water - job done!

Fashionable light colours such as matt white, matt silver or matt grey are notoriously difficult to clean. A winter of road salt, a rainy day, or simply brake dust or exhaust vapour all present problems.

The car wash, steam cleaners or ordinary cleaners only remove surface dirt, and they always leave a dark haze on the film.

This Opel Astra speaks volumes. After not being washed for 3 months, this car was cleaned using the conventional method. Only the surface dirt was removed. At first sight, it looks fine. Only when the left hand side has been cleaned with Car Wrap Cleaner is the difference suddenly apparent.

This Astra speaks volumes. After not being washed for 3 months, this car was cleaned using the conventional method. Only the surface dirt was removed. At first sight, it looks fine.

Don't!:

Never use thinners, degreasers or surface cleaners for removing dirt. This will increase the problem much more.

Just do!:

A great seller to add to your range! Your car wrap clients can maintain that perfect look themselves if they purchase a Car Wrap Cleaner set.

The special sponges can be ordered separately.

Protective layer for window film

WINDOWFILM-POLISH

- gives the film a protective sheen
- offers an extra protective layer between the film and the window reveals.
- for interior use only

After the application of window film, the top layer often displays stripes and matt areas. These are just harmless traces of lime from the application fluid or simply small areas of dirt left by the squeegee. After a while, the film on wind-up windows may start to get scratched or scuffed by the dirt in the seals and felt in the window rebates. This can be fixed.

Film-Polish brings back the shine and leaves the film sparkling, as well as giving it a dirt-repellent protective layer.

Window film in cars

Ideal for use on the window film on wind-up windows, as the smooth protective layer allows the film to run more smoothly between the seals and the felt in the window rebates. This will prevent scratches.

Window film in buildings

Film-Polish gives large windows an impressive sheen as well as a dirt repellent layer. Not only that, after the film has been polished it has an in-credibly 'clean and tidy' appearance - great for customer satisfaction!

Large windows look exceptionally clean after being polished with Film-Polish and it makes them dirt-repellent.

Wind-up windows are subjected to abrasion by the felt, etc, during use. This abrasion can be reduced by applying Film-Polish to the film immediately after application.

Tip:

A great seller to add to your range! Your customer can maintain that perfect look of the tinted glass themselves if they purchase a bottle of **GP-346 Windowfilm Polish**.

RIGHT-ON! SPRAY -Application liquid

- faster than soap and water
- easy to use
- 3 minutes to position and make adjustments before adhesion starts

The one and only 3 minute APPLICATION LIQUID

The perfect solution for fast and effortless application of self adhesive films without air bubbles and wrinkling. Right-On allows the film to be repositioned after initial application.

It offers all the advantages of soap and water, but it works faster. Spray the substrate and adhesive layer of the film, apply the film and slide it effortlessly in to position. The film begins to bond after just 3 minutes and you can even start working it into channels immediately.

Right-On Spray will not affect the adhesive layer.

Suitable for use on all types of wet application film.

Hot garage? Sticky film? No Problem

On warm days, even the friendliest wrap film can get aggressive which can cause install times to shoot up as well as frustration levels. Using a thin mist of Right-On Spray on both the surface and adhesive can help that panel slide and glide. The unique blend of Right-On Spray won't compromise the adhesive so it's safe for all brands.

Quick and easy installing of PPF films

Right-On Spray is suitable and effective solution for PPF. It gives the installer the freedom to position and readjust which allows them to install with confidence. And because of the special ingredients in Right-On Spray, the final adhesion level is even improved when compared to other liquid carriers.

Oversaturated or Aggressive Full Print Wraps?

Printed film sometimes feels different, has harder tack and can be tough to install (especially when the panels are big). This is often caused by films that haven't properly outgassed or are oversaturated. Heat and humidity can also cause full print wraps to grip overly hard. Right-On Spray was made for just these situations. Simply spray, position, squeegee and you're done!

This product has been developed in accordance with the latest European standards and legislation, and conforms to all current environmental requirements.

Positioning concentrate for window film

FILM-ON

- improved moisture distribution
- no more white haze or spots after application
- easier positioning and squeegeeing

Film-On is the window tinter's friend. It has unique properties not found in any other window film application liquids. It currently has the edge on all other products on the market.

A colourless jelly-like concentrate for dilution in water. Just add a little to water, give it a quick shake and it's ready to use. Film-On evaporates faster, and has a glutinous property that increases the viscosity of the solution. When it's sprayed on to glass, it stands firm unlike the soap and water solution that just cascades back down the glass.

You will notice immediately how much easier it is to slide the film. The solution between the glass and the film is softer and thicker which makes squeegeeing a lot easier.

White striping and moisture build-up between the film and the glass during drying is also reduced (common with safety film) - a big plus! Adhesion is vastly improved.

A white haze or a collection of miniscule air bubbles is caused either by poor execution or by the reaction between the moisture and the adhesive layer of the film. **FILM-ON** almost eliminates the chance of white haze.
