ULTRAMAR CLEANING TOOLS

Ultramar's cleaning tools are made of high quality recycled plastic. It's waste leftover from the hygienic brush production process. It's a small but important step. We're using fewer raw materials. They're high quality and they last longer, so you won't have to replace your brush as often. It's a real win-win.

Ultramar Cleaning Tools: a small step towards a better world!

Why Ultramar Cleaning tools?

- Made of recycled plastic
- Durable and lightweight
- Ultra long-lasting
- Made in Europe
- Special rubber bumper prevents scratches
- Split-fibre tips retain water longer for better cleaning
- Water-permeable brushes and handles
- Advanced water saving click system
- The water fills the chamber in the brush and is dispensed by fibre bundle. The water is applied directly onto the cleaning surface so you don't waste water. The split-fibre tip washes is self-cleaning.
- High fibre quality means the fibres stay intact
- Safe and easy suspension system

Recycled material

Both the fibres and the plastic are made of recycled material (98% recycled, 2% ink). The percentage of recycled material varies from product to product, as we also use other materials like aluminium, in addition to plastic.
