The detailed diagram shows the muffler flange being secured to the tailpipe. A nut is being tightened onto the flange. A dimension line indicates a 55mm gap between the muffler and the tailpipe. A callout box provides a five-step procedure: 1. Apply exhaust assembly paste to the flange. 2. Hand-tighten the nut. 3. Tighten the nut further. 4. Tighten the nut to 24 Nm using a 13mm torque wrench.
