

Care of your fitted sheets

Machine washing:

To effectively eliminate dust mites and their allergens, we recommend washing your ProtecSom covers at a maximum of 60°C. However, we advise against washing at 90°C, as it may cause significant shrinkage of your anti-dust-mite covers.

Delicate wash – max 60°C

Detergent choice:

For washing your covers, you can simply use your usual detergent.

Drying:

You can safely tumble-dry your covers, with no risk to the fabric.

Tumble drying

Maximum outlet temperature 60°C

Products to avoid:

Fabric softeners and bleach:

Avoid these products as they can irritate sensitive skin and reduce the effectiveness of the covers.

Solvents and dry cleaning:

Avoid solvents such as perchloroethylene, commonly used in dry cleaning. This product can not only damage the fabric of your covers but is also known to be potentially allergenic.
