

Activate Nuki Web

To activate Nuki Web for your Smart Lock, you need the following **Nuki app versions**:

- iOS 0.4.18 (or higher)
- Android 0.4.21 (or higher)

Also make sure you have the **latest software installed on your Smart Lock** (at least version 1.x). Tap on the desired Smart Lock in the Nuki app and enter the lock settings. Then go to “Manage Smart Lock” and choose “Firmware update” to check whether your Smart Lock is up to date.

What is Nuki Web (IFTTT)

With Nuki Web you can easily manage and operate your Smart Lock with your computer.

You can also use Nuki Web to integrate your Smart Lock into **IFTTT** and include it in countless smart home applications.

To activate Nuki Web you need a Nuki Bridge.

Activate Nuki Web via the Nuki app

To use the Nuki Web platform, you have to activate Nuki Web with your Nuki smartphone app. Tap on the desired Smart Lock in the Nuki app and enter the lock settings. Then go to “Manage Smart Lock”. Here you can find the option “Activate Nuki Web (IFTTT)” where you can activate Nuki Web for your Smart Lock. Follow the instructions in the Nuki app.

If you want to manage multiple Smart Locks with Nuki Web, you have to activate each Smart Lock separately for security reasons, so that it appears in your Nuki Web account.

Add a Smart Lock to Nuki Web

Use your Nuki smartphone app to activate a new Smart Lock for your Nuki Web account. To activate a Smart Lock for Nuki Web, tap on the desired Smart Lock in the Nuki app and enter the lock settings. Then go to “Manage Smart Lock” and “Activate Nuki Web”. Follow the instructions in the Nuki app.

To activate Nuki Web you need a Nuki Bridge.

If you would like to manage multiple Smart Locks with Nuki Web, you have to activate each Smart Lock separately for security reasons, so that it appears in your Nuki Web account.
