

SMART WATER SYSTEM

THE STORY OF UNITO

We are a family owned company; our team have been developing new technologies and cool products for over 50 years.

We also love food, especially our home-made food, so we decided to combine our passion into our work and so we created UNITO.

Over the past decade, technology and innovation became a very important part of our daily lives, however Looking at the boiling water and other water system related products available today in the market, we cannot really see the integration of such progressive technology.

This is what we at UNITO wish to bring, cool, fresh, out of the box thinking, smart and constant approach of improving.

UNITO's smart water system design bring a very innovative approach to a very conservative environment, the good news is we keep the cost affordable and inviting everyone to enjoy a better way of living.

Our mission is bringing innovation into daily life, whether kitchen appliance of other home electric products, we believe that each household should enjoy high quality intelligent products at affordable cost.

WHY UNITO?

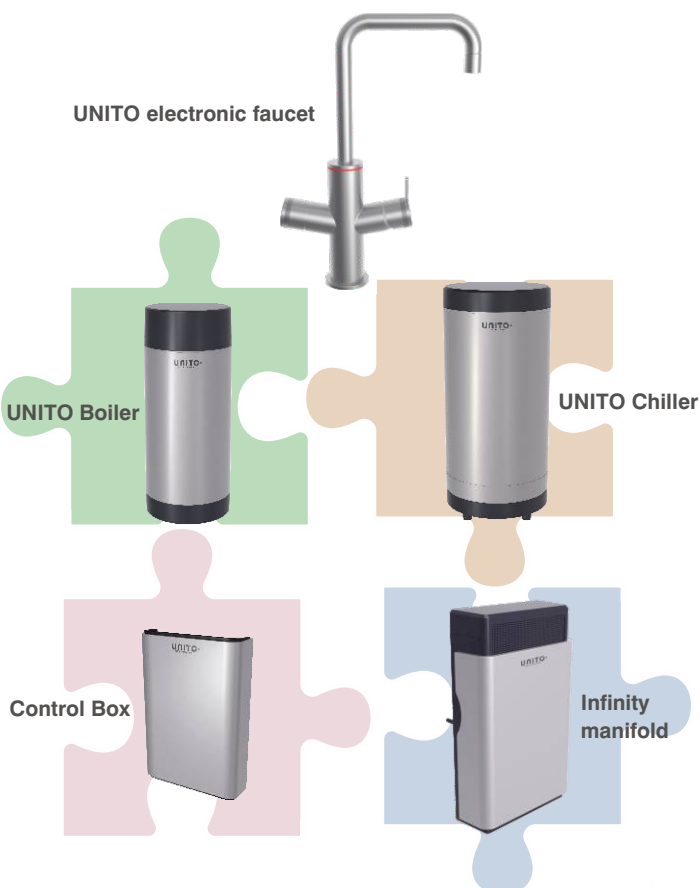

Full control

UNITO ANYWHERE & smart app is specially designed for a series of UNITO kitchen products, it is a dedicated app allowing full control through your mobile device, making the time spent in the kitchen more fun and efficient.

UNITO ANYWHERE is activated either by WiFi or Bluetooth, all you need is a smart phone/tablet connect it to one of UNITO's smart appliances and a home router with internet connection.

Smart features include:

- Temperature settings hot and cold.
- Setting soft medium or intense sparkle.
- Timer and profile settings, energy saving.
- Remote control from anywhere, switch off on holiday.
- Child lock.
- Service call, let us know what the problem is directly from the app.
- UNITO can fully monitor the system from a distance.
- UNITO shop, order your filters directly over the app/web.
- UNITO dashboard, displays water consumption, power consumption.

Modular

Isn't it very annoying if you had to change a complete system just to add a feature??

What if you don't have to? We at UNITO want to save you money by building the system in modules, allowing you to choose the modules you need and if you change your mind you can add other modules later on in a very cost effective way.

For example, you can start with boiling water, then add chilled water or sparkling later on.

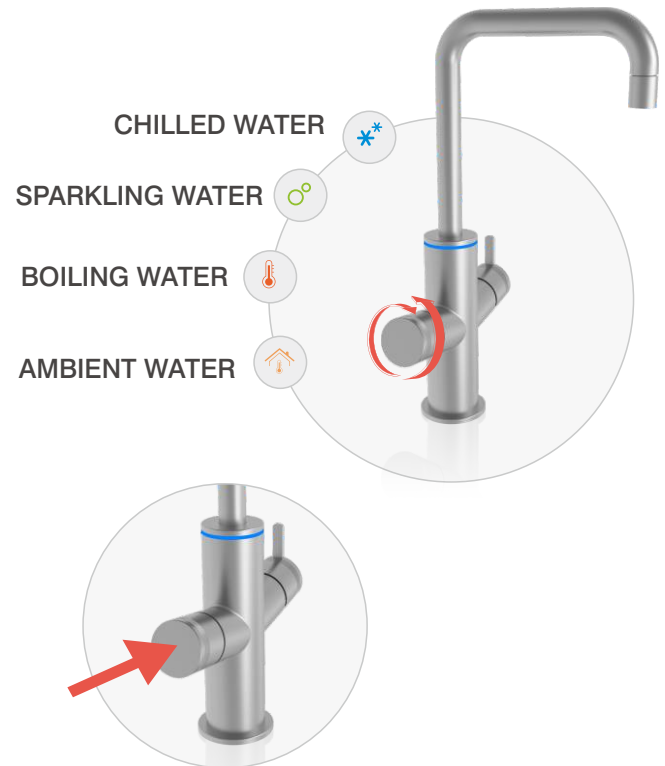

WHY UNITO?

Design

UNITO's design is all about being refined and paying attention to the most minor details. We put effort in creating a unique user experience distinct our product from other products on the market.

- We use fine material for long lasting quality.
- We designed the knob interface for smooth and easy operation.
- We integrated both mechanical and visual position, the LED feedback so you always know your selection.
- Our users mention frequently that UNITO system is so intuitive that they didn't even need to look at the user manual.

Safety

Protecting our families is what we all care the most, so we at UNITO take product safety very seriously and having the technology factor on our side allowing us to introduce safety tools which our competitors can only envy.

Our first safety layer is the product itself, having a 2 non-simultaneous operation of select and dispense do not allow accidentally dispensing boiling water.

Our second safety layer is through the UNITO app, no matter if you are at home or office, you can shut down the system, turn on child lock mode or simply reduce the hot water temperature.

WHY UNITO?

Convenient

UNITO ANYWHERE mobile app making your life so much simpler.

By having remote access to your system, you can simply operate it from practically anywhere.

If you go on vacation and forget to turn it off? No problem, just use the app.

Its time to replace filter or call for service? No need to waste too much time, you can simply use our app or web hop to purchase filter or request for technician visit.

Preventive

Preventive maintenance is most likely one of the biggest revolutions in home appliance.

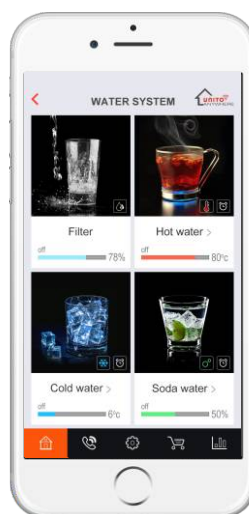

Our system can monitor its behavior and report without user intervention about potential problems or even trigger a technician to come and have a look.

Forget about having to face situations where problem occurs and you have to waste a lot of time describing it over a call, with our technology, not only we know about potential problems but we know exactly where the problem might be and while nobody like to wait for technicians at least at UNITO we can make this experience more pleasant and much less time consuming, our technician is coming ready with the right replacements.

SAY HELLO TO SMART !

UNITO anywhere IoT platform

Big data analysis/Business intelligence.
Self diagnostic/active preventive maintenance.
User alert/data visualization.
Remote access/Local access APP.
Voice recognition feature.

Dashboard

UNITO's smart dashboard is yet another tool giving you transparency over your system.

Voice assistant

All of UNITO's products are compatible with Amazon's Alexa!!

Cooking? your hands are full? how about voice activation?
With UNITO's product all you need is your voice, simply command "Alexa, turn on boiling water." and Amazon's digital assistant, Alexa, can do the task for you allowing you to keep your hands free while you are working around the kitchen.

UNITO

A modern, sleek, stainless steel kitchen faucet is shown dispensing a stream of boiling water into a light blue bowl. The water is bubbling, and steam is rising from it. A person's hands are visible holding the bowl. In the background, a wooden cutting board with cucumbers and tomatoes sits on a dark countertop.
