

The network controller to control the pool technology

The iPool network controller is able to control and adjust all the pool technology elements by means of the perfectly designed user-friendly web application. In case of problems with the internet connection, it is possible to establish a direct connection to the controller through WIFI. The iPool is intended for DIN rail mounting directly onto the switchboard.

Basic functions

The iPool has 6 preset basic pool operation modes.

ON
The circulating pump is switched on at speed 2 (variable pumps can be set to 3 speeds) and heating switched off.

OFF
All is switched off.

COMFORT
This mode is intended for routine pool operation when the priority is to achieve the required temperature. This mode allows you to preset 4 filtering periods per day when you can preset the pumping power and select when you want to use the overflow or the bottom drainage.

PARTY
This mode switches the circulating pump at an alternative higher speed and the heating at an alternative desired temperature.

ECO
This is a combination of the COMFORT mode and SMART HEATING function.

WINTER
To enable this function, an outdoor thermometer must be installed.

- If the outdoor temperature drops below 0 °C the circulating pump is switched on.
- After 15 minutes, the system checks the water temperature .
- If the water temperature is still below the preset freezing temperature (e.g. 4 °C), the relay switches the heating on.
- After the preset temperature is reached, the circulating pump stops. The pool temperature and circulating pump will be tested again after 6 hours.

POLLET POOL GROUP
SUPPORTING POOL BUILDERS

In the last 25 years Pollet Group quickly expanded in the important sector of water. This branch, called Pollet Water Group (see www.polletwatergroup.com) now has more than 30 specialized water treatment companies. Following the expansion in water treatment, Pollet Water Group started to supply

components to the swimming pool industry through its existing network of companies. As the demands from the market started to grow, it was decided in 2004 to create the Pollet Pool Group (in short PPG). Today PPG consists of 8 distribution companies and 2 manufacturers (Aquadeck and Niveko).

POLLET POOL GROUP DISTRIBUTION

- 7 European distribution offices + 1 subsidiary in Angola
- Only for the professional pool builder
- The most complete range of pool components
- Own products in collaboration with renowned partners

POLLET POOL GROUP MANUFACTURING

- 2 manufacturers: Aquadeck & Niveko
- Only for the professional pool builder
- A complete & exceptional range of pool products
- Full support: from sales to training over comprehensive technical support and custom-made products

iPool, ingeniously simple

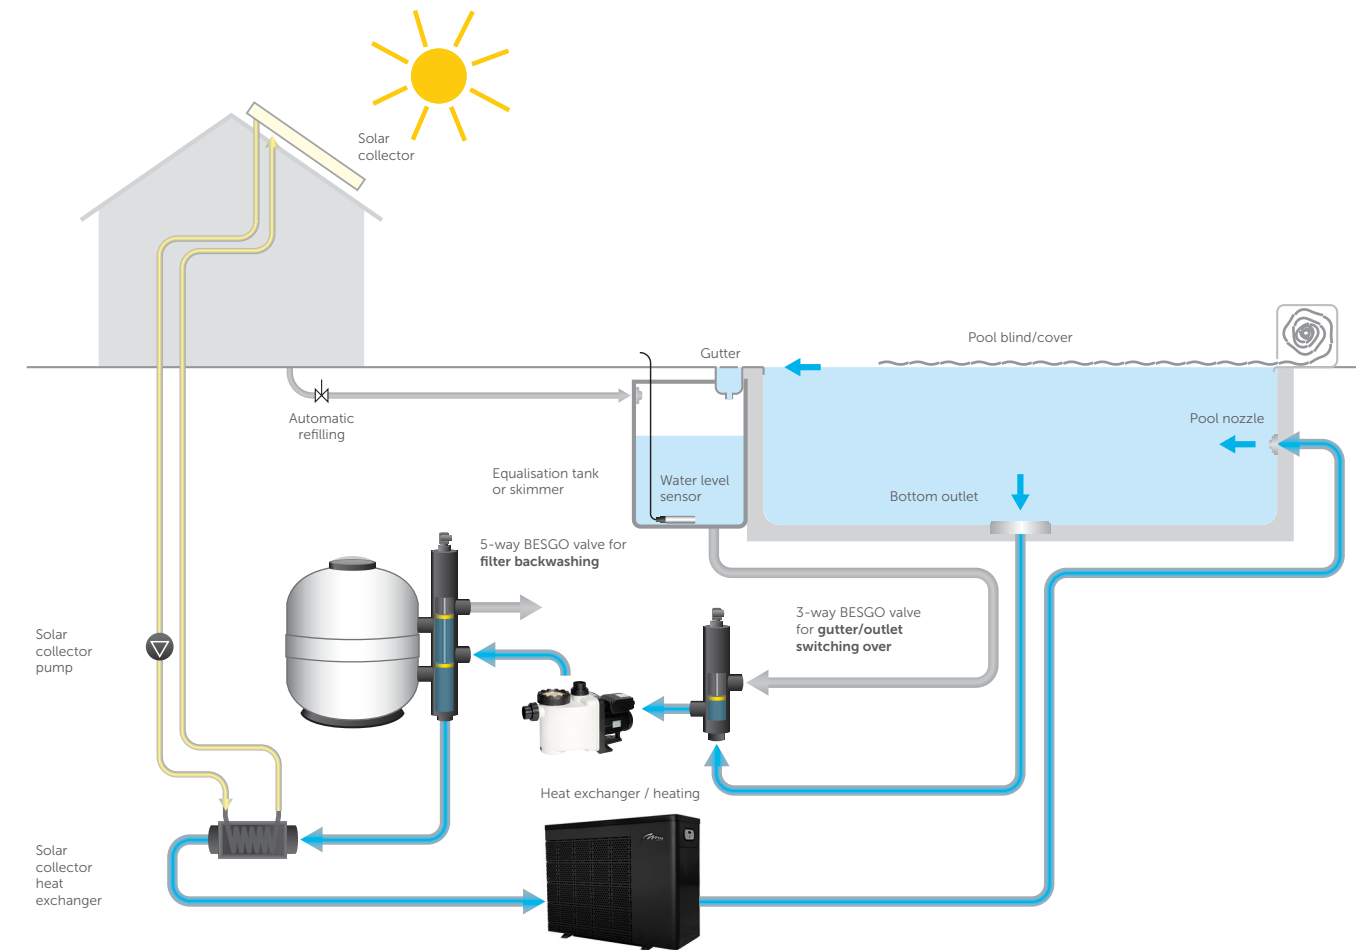

iPool, ingeniously simple

Thanks to iPool you control your pool with just one simple app. Close & open your cover from a distance, switch on your pool lighting in one click, check the temperature of your water, have insight into the filter & dosing functions. iPool? We make your pool intelligent in an ingenious, but simple way!

 Pollet Pool Group

Additional settings

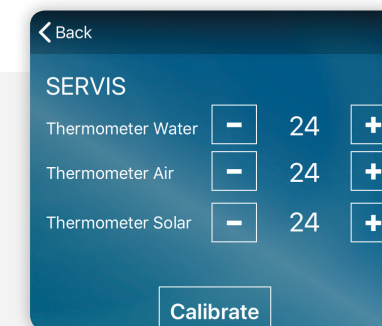

Next to the 6 basic user modes, the iPool offers supplementary functions to really fine tune and automate the functioning of your pool.

Control your Watersens Net

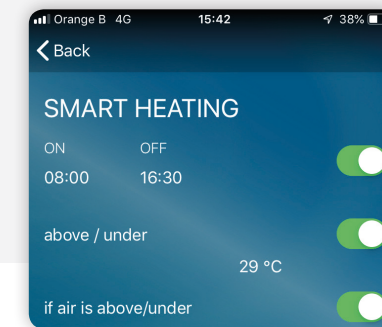

Switch between the basic user modes

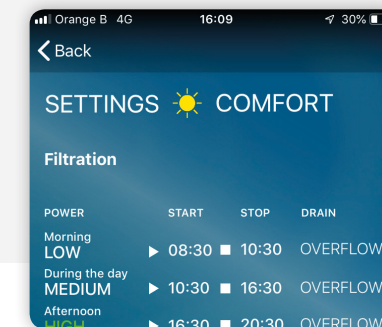

Calibrate your probes

Define water filling parameters

Optimize Smart Heating parameters

Fine tune basic mode setting
