

HEPAW SYN

A combination of powerful ingredients

Features

A combination of high effective ingredients for metabolic support can help to:

- Support the function & health of vital organs (gut, liver, kidney)
- Enhance general metabolic processes
- Irreversibly bind the harmful toxins
- Preserve cell volume & function
- Reduce the risk of disease
- Promote regeneration after gastrointestinal diseases
- Improve intestinal health
- Contribute to better health & vitality

Recommended Application:

- In case of metabolic disorders
- When feeding grain containing food
- Preventive or acute treatment of digestive problems
- In stressful situations (transport, shows, hunting, New Year)
- After medical treatment to restore intestinal balance
- Long-term use for continuous support

HePaw Syn – A Powerful Combination of High Effective Ingredients

HePaw Syn is uniquely formulated to support the function and health of vital organs. It is a combination of beneficial ingredients such as pre- and probiotics, betaine and a toxin binder focusing on gut, liver and kidney support.

Together with highly bioavailable trace elements, vitamins and natural phytoactive ingredients,

HePaw Syn is a complete formula for additional metabolic support.

Biosprint®—A New Game Changer

HePaw Syn is the first pet supplement to contain Biosprint® world wide. Biosprint® has long proven its benefits for animals of all kinds, now also with registrations for pets. Combined with the well-established *E. faecium* and powerful prebiotic, a highly effective support for the intestinal microbiota can be provided – a synbiotic concept to support overall intestinal health.

Metabolic Support for All Cases

Whether it involves the function of the liver or the kidneys, or general disorders of metabolic processes, **HePaw Syn** is there to help. Commercial pet foods are often formulated with cereal grains and cereal grain by-products. It is estimated that up to one quarter of grains are contaminated with mycotoxins. Moreover, mycotoxins are resistant to the high pressures and temperatures in the extrusion process,

ultimately ending up in the food. **HePaw Syn** contains toxin binders that irreversibly bind the harmful toxins and may provide protection against mycotoxic diseases.

Betaine Completes the Powerful Components

Betaine serves many useful cellular functions. It is a methyl group donor for methylation reactions, an essential biochemical process for all life. Betaine protects against osmotic stress—not only in the gut, but also in the kidney. Efficient osmoregulation increases nutrient availability for health and performance. By improving water retention during diarrhea and supporting the intestinal function, a faster recovery can be expected. In the kidney, betaine preserves cell volume and function in the presence of the high osmolarity needed for proper renal function.

Highly bioavailable trace elements, vitamins and phytoactive natural ingredients additionally contribute to enhance metabolic processes.

A Powerful Combination of High Effective Ingredients for Pets of All Ages

HePaw Syn's formulation allows for long-term use for continuous support. Moreover, it can be used alone or as a complement to our range of pet pastes. **HePaw Syn** is a powder, so it is easy to top-dress over the feed.
