

HotSpot Titanium water filter - mains cold water

170F

The big question

At HotSpot Titanium we wondered why filtered water taps were switchable between filtered and unfiltered. We mean, why would anyone want unfiltered water when you can filter all the water passing through your kitchen tap? So, we came up with an answer: The cold water filter. With its ample capacity you can have every drop of cold water filtered.

Filtered water all the time

Our new cold water filter set will provide you with filtered water all the time! The 170F water filter improves the taste and odour of the water for every requirement. Next to these improvements of your water the 170F water filter also filters chlorine out of the water along with sediment, plastics and other dissolved organics, such as pesticides.

Available for every mixer tap

The cold water filter set can not only be installed into our HotSpot Titanium Boiling system but can also be fitted onto a standard kitchen mixer giving it the ability to deliver fresh filtered cold water.

Benefits

- ✓ Reduction of bad taste and odours
- ✓ Reduction of dissolved organics (such as pesticides)
- ✓ Ensures a good flow rate through the tap
- ✓ Reduction of Chlorine
- ✓ Small size for the 8000ltr capacity
- ✓ Can be installed both horizontally or vertically
- ✓ 5 Micron carbon block filtration and ion exchange resin gives improved performance over Carbon only filter set

Technical details

Water filter set, what is included?

- Water filter head
- Water filter hose (3/8" F - 3/8" F)
- Water filter cartridge 170F

Water filter set 170F	15041087
Water filter cartridge 170F	15041088
Optional accessory: water filter flow meter	15041089

Dimensions		170
Height, filter system (mm)		295
Height, filter cartridge (mm)		245
Diameter of filter cartridges (mm)		95
Min. distance from ground (mm)		40
Weight, filter cartridge (kg)		0.9
Operating Conditions		170
Max. working pressure		2 - 8 bar (29 - 116 psi)
Water temperature / ambient		4° - 30°C (39°F - 86°F)
Capacities		170
Hardness in dH	Bypass	
<6	0	8.000

Water filter flow meter - the smart way to monitor water flow

The water filter flow meter measures the total amount of water flowing through your filter system. Its acoustic and optical signals remind you to replace the filter cartridge. The flow meter has built-in settings for adjusting to the correct filter type and local water hardness. The click-on feature allows the flow meter to be easily mounted onto a filter head.
