

HotSpot Titanium water filter - boiling water

170C/250C

Quality taste boiling water

At HotSpot Titanium we're always focussed on improving our offering to the users of our products. The quality and the taste of your water is our highest priority. This resulted in a new water filter. We've upgraded our boiling water filter to a Swiss manufacturer at the beginning of 2021. The new water filter greatly improves the taste and odour of the boiling water that's delivered and enhances the flavour of any hot beverage being poured. Also the new water filter protects the system even better against limescale build up. With 100% confidence we can say we offer the best tasting boiling water filter solution on the market.

Keeping your water healthy

The new filter stabilizes healthy minerals, such as calcium and magnesium! By converting minerals into a modified form, this patent-protected technology prevents scale build up and keeps your water healthy and tasty.

Reducing the use of plastics

In our bid to reduce plastics within our systems we have also made it our goal to reduce the amount used within our filter sets. This also gives the added benefit of a smaller, more compact filter, which is easier to position in the cupboard either vertically or horizontally. A win-win if you ask us!

Guarantee yourself of the best tasting boiling water in the market today. Use the new HotSpot Titanium boiling water filter. Available in two capacities 170C/250C. The 170C is recommend for home use (annual replacement). The 250C is for office use (6-12 months replacement, dependant on usage).

Benefits

- ✓ Proven and tested - Improvement of taste of the water and beverages
- ✓ New patented Mineral stabilization - Ensures balance of minerals within the water
- ✓ Physically smaller - Takes up less space in the kitchen cupboard
- ✓ Less plastic waste - Reduced plastic used in manufacturing process
- ✓ Better bacteria growth inhibition - Reduction of dissolved organics and bad odours from the mains water
- ✓ Quick cartridge replacement - Easy without isolating the water supply
- ✓ Easy delivery - Replacement cartridges available from the HotSpot Titanium webshop for delivery direct to your door

Technical details

Water filter set, what is included?

- Water filter head
- Water filter hose (3/8" F - 3/8" F)
- Water filter cartridge 170C

Water filter set 170C	15041084
Water filter cartridge 170C	15041085
Water filter cartridge 250C	15041085
Optional accessory: water filter flow meter	15041089

Dimensions	170	250	
Height, filter system (mm)	295	365	
Height, filter cartridge (mm)	245	315

Operating Conditions	170	250	
Max. working pressure	2 - 8 bar (29 - 116 psi)		
Water temperature / ambient	4° - 30°C (39°F - 86°F)		
Capacities Boiling Systems	170	250	
Hardness in °dH	Bypass		
>4	6	3.330	5.000
10	6	1.500	2.250
15	5	850	1.280
21	5	570	860

Water filter flow meter - the smart way to monitor water flow

The water filter flow meter measures the total amount of water flowing through your filter system. Its acoustic and optical signals remind you to replace the filter cartridge. The flow meter has built-in settings for adjusting to the correct filter type and local water hardness. The click-on feature allows the flow meter to be easily mounted onto a filter head.
