WATER TAP
FOR EVERY KITCHEN

For your home

hotspot titanium

100 years of Dutch heritage

Hotspot Titanium as an independent company was born out of a Dutch innovation hub: Inventum.

Founded in 1908 by Alexander Vosmaer, Inventum used the specifics of electric energy to create a range of innovative ventilation and boiling water appliances.

Energy Innovation First: safe and trusted. This promise has remained for more than 100 years. A promise that started with innovation and enthusiasm of people to do things differently and better and has evolved into producing new products and creating new brands such as Hotspot Titanium.

Thanks to Inventum's rich history, innovation and expertise in delivering sustainable, energy-saving hot water and ventilation solutions to the environment, Hotspot Titanium was spun off as a sustainable and lean manufacturing company that guarantees quality from start to finish with its filtered boiling water solutions.

At Hotspot Titanium, we believe the kitchen is a central point of the home and workplace. A place to connect and collaborate, to have exciting conversations and share experiences. A place where you eat and drink together. Where you create ideas and make memories.

We know that our customers want tapware that reflects their personal style. That's why we have exclusive design taps in our product range of various styles and finishes to suit any taste. We also know that they want a filtered boiling water solution that stands the test of time and isn't impactful on the environment!

Our 3-in-1 filtered boiling water tap switches easily between cold, hot and boiling water. Combined with our 4-liter or 8-liter water titanium boiler, Hotspot can support family homes and commercial spaces alike.

We chose to use titanium for our boiling water tank because it's durable, extremely resistant to corrosion and, unlike other inferior materials, has no build-up of calcium lime scale in the tank. What's more, titanium never passes its ions onto the drinking water which makes it 100% non-allergic and guarantees a pure taste. As a proof of our trust, we offer you a 20-year warranty on our tanks!

When choosing a filtered boiling water appliance for your residential or professional space, it is paramount to ensure the product of your choice delivers the best results and the purest filtered drinking water; as well as a luxurious design that matches your taste and your kitchen interior. With Hotspot Titanium, you get it all.

hotspot titanium

Why you need Hotspot Titanium?

A boiling water tap that ensures optimum efficiency?

Yes, with our filtered boiling water tap you save on your energy bill, your valuable time and space on the kitchen counter.

Efficient and sustainable

Hotspot Titanium boiling water taps use less power and only boil the water to be used, unlike a traditional kettle. Hotspot Titanium has a heater full of instant boiling water and has minimal heat loss due to the very good insulation.

Save Time

You no longer have to wait for the kettle to boil so you can save on your precious time, electricity and water with Hotspot Titanium as a solution for filtered instant boiling water. Our heaters with various capacities are designed to meet your needs at home.

Save space

The robust and durable boiling water tap takes up little space on the countertop. In addition, our water heaters are compact in size, which makes them easy to fit in a kitchen cupboard. Installation does not require cutting into the cupboard or the countertop; so that also means less clutter.

Great personal service

Hotspot Titanium is big enough to offer comprehensive service and small enough to care. Our Trustpilot reviews say as much about our people as they do about our product. Our customers prefer the personal touch and this is what we always endeavour to provide. Whether contacting Hotspot Titanium via our webchat, via our landline or via our email addresses you will get a timely, personalised response first time and every time!

Titanium

Titanium is one of the strongest materials and very resistant to corrosion and the build-up of limescale. Moreover, titanium never passes on its properties to the drinking water, so there is no aftertaste. We are the very first boiling water company where the water reservoir is completely made of high-quality titanium. For absolute peace of mind, we provide a 20-year warranty on the titanium tank.

Boiling water with a smooth flow

Hotspot Titanium delivers filtered boiling water without spluttering by using a unique smooth flow technique. You no longer have to wait for the water to boil. With Hotspot Titanium you can easily and quickly fill a tea glass or a large pan with 100°C boiling water. You immediately get the right amount of water, so you waste less water.

A robust and reliable design

The design of Hotspot Titanium is not only beautiful, but it is also designed to last. We have a wide range in different styles and finishes so that there is a suitable filtered boiling water tap for everyone. Hotspot Titanium gives a boost to every kitchen design!

Safety above all

Hotspot Titanium combines luxury, convenience and sustainability in the kitchen. The 3-in-1 tap easily switches between cold, warm and boiling water. All our taps are equipped with safety systems so that children or people who have not used the tap before cannot unintentionally tap the boiling water from the tap.

Our full product range

The kitchen is the heart of the home, where the meals that unite us are prepared. It is a place that allows connection and thus the creation of precious memories. How do you choose the right water solution to embrace this experience?

The Calisto is a mechanical 3-in-1 filtered boiling water tap, available in five different finishes. The Calisto series has a high C-shaped spout and a sleek Italian design. This beautiful series can be supplied with a 4- or 8-liter boiling water heater. Regular hot and cold water is connected to the existing pipes. Because the boiler is very compact, it can be placed in almost any kitchen. With the Calisto, safety comes first with a Spring-back-safety system, with which children cannot simply activate the boiling water function. The tap is also equipped with an insulated spout so that it stays nice and cool during use.

In addition, the tap is equipped with a unique smooth flow technique, which ensures that boiling water never comes out of the tap already spluttering.

Connection: Hot and cold water is connected to the existing pipes.
Swivel Range: 180°
Tap hole: Ø 35 mm
Child safety system: Spring-back-safety

Why a titanium heater?

Our 4 liter and 8 liter water heaters feature a pure titanium water storage tank which ensures that there is no aftertaste. In addition, a high-quality vacuum insulation panel around the tank keeps the temperature at the right level (above 100°C), guaranteeing negligible standby loss.

Do you choose an 8 liter or a 4 liter heater?

A 4 liter heater is suitable for an average household. The 8 liter heater with built-in combi facility provides twice as much boiling water. The 8 liter titanium heater delivers a maximum of 27 liters of boiling water per hour, which is comparable to 140 cups of tea.

Hot-mix: instant hot water

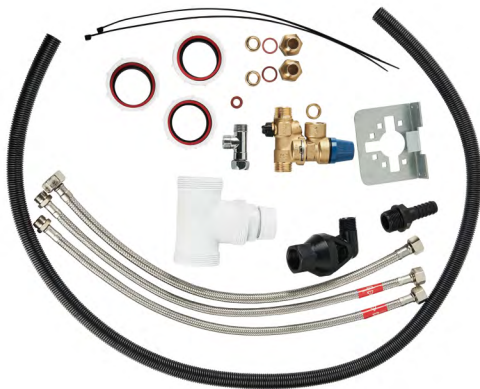

Did you know that our 8 liter heater can supply both hot water (adjustable from 35 - 70 degrees) and boiling water. Depending on the volume required, no additional heaters or long pipes to external hot water supplies are required.

TECHNICAL DETAILS: HEATERS:

	MEDIUM CAPACITY 4 LITER	HIGH CAPACITY 8 LITER
Minimum bar pressure	1 bar	1 bar
Immediate draw off (cups)	20	40
Cups per hour - 167ml	120	140
Dimensions (W x H x D mm)	210 x 325 x 285	210 x 525 x 285
Power / Voltage	2.1 kW	2.1 kW
Standing heat losses	16W	25W
Tank / Element material	titanium	titanium
Hotmix capability	N/A	15l @ 50°C
Leak detection safety	✓	✓
Water temperature	100°C	100°C

Included accessories:

Standard boiling water filter set included:

Optional accessories:

- Hotspot Titanium – Boiling Water Filter Cartridge
- Hotspot Titanium – Cold water filter
- Hotspot Titanium – Boiling water extension hose

Water Filtration

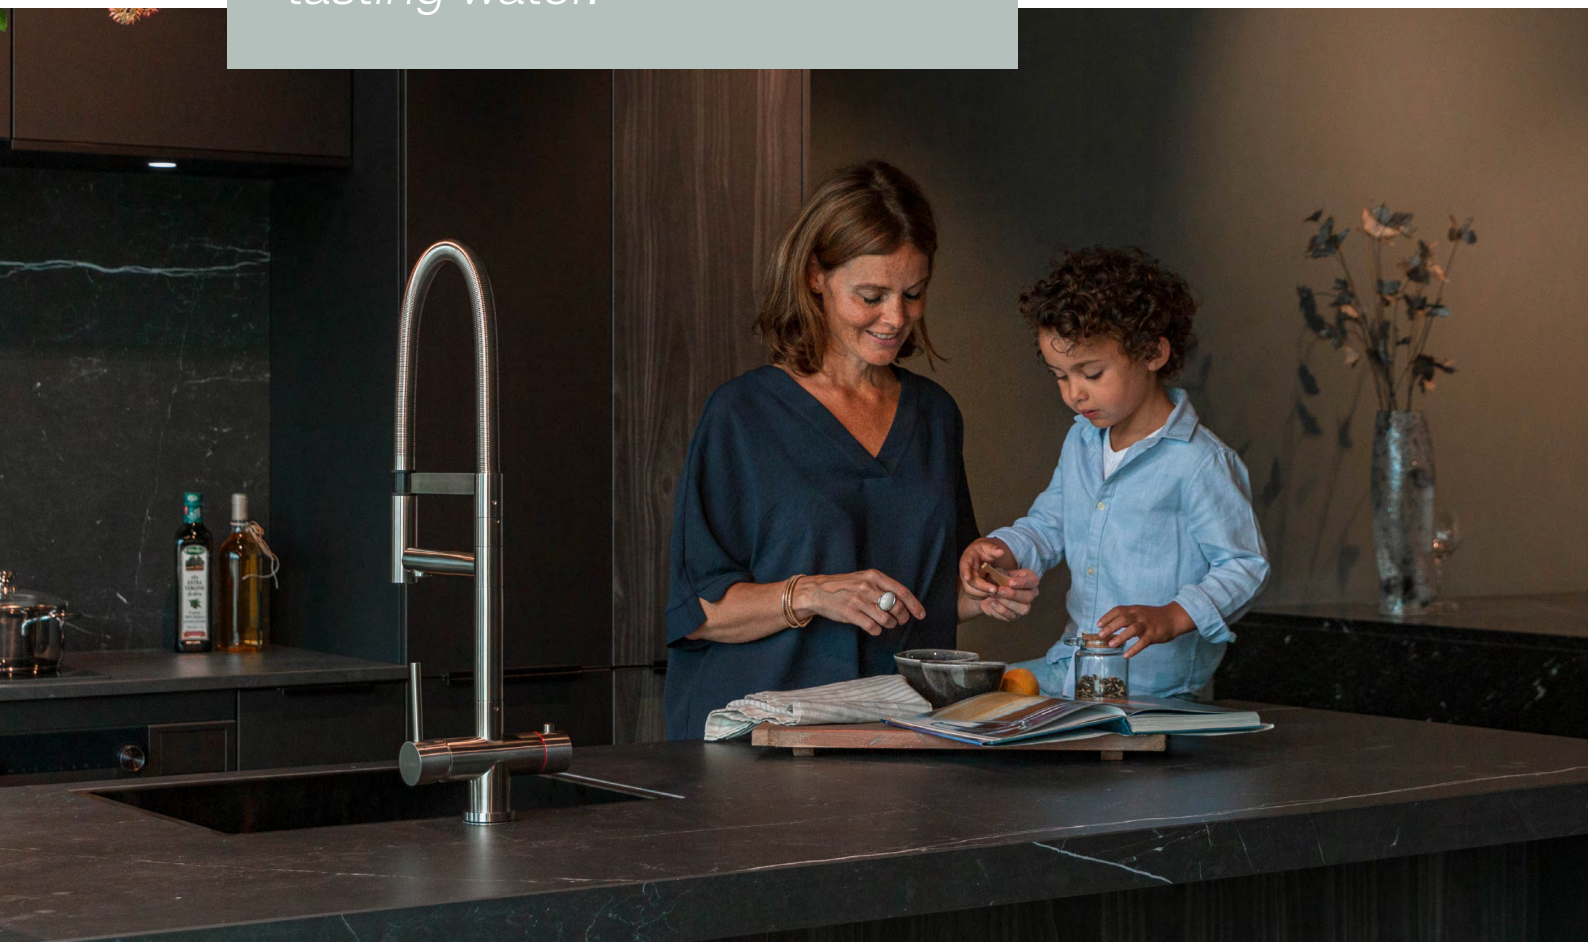

Our waterfilters are the ideal solution for consistently high quality and great tasting water for all cold and hot drinks – mostly in combination with lime scale and corrosion protection. Our filters have up to 5 filtration levels - all in one filter cartridge – and 7 bypass levels.

Benefits:

- Perfect taste thanks to our patented mineral-stabilization technology;
- Easy replacement without turning off the water supply (auto shut-off function);
- Bypass function with seven settings that uses our patented DuoBlend® technology;
- Integrated protection against microbial contamination;
- Very high output combined with maximum improvement of both taste and smell;
- Certified for contact with food.

Our waterfilters are the ideal solution for consistently high quality and great tasting water.

”

Quality comes from within...

Take a look at our complete water filtration system

Particle filters +

Particle filters*

Specially selected filter fleeces hold back dirt and particles, thus providing lasting filter protection even when water quality is poor.

Activated carbon +

Activated carbon*

Thanks to their enormous surface area, our activated carbon components are able to remove undesired substances such as chlorine and organic contaminants and they eliminate unpleasant odors.

We select and combine different types of activated carbon to meet each application's specific requirements.

+ Ion exchangers

Ion exchangers

Ion exchangers reduce water hardness and thus prevent limescale deposits. Depending on the type of filter used, partial demineralization (decarbonization) can also be achieved. In addition, ion exchangers reduce toxic heavy metals such as lead.

Fine and microplastic filters +

Fine and microplastic filters*

Carbon fiber and microfiltration modules efficiently remove even the smallest particles and impurities. At the same time, they form a second line of defense for holding back organic contaminants.

+ Mineral stabilization

Mineral stabilization

Healthy minerals such as calcium and magnesium are partially retained. Calcium, which forms limescale, is converted into a soluble form by our patented mineral stabilization technology in order to prevent limescale deposits.

*Applies to cold water filter.

Easy to install in 4 steps

A Hotspot Titanium system can be installed in an existing or new kitchen

Only four basic conditions need to be present in the kitchen cupboard. These are:

1. Mains cold water with isolation valve
2. 13amp electrical socket
3. Space (see heater dimensions)
4. Waste connection

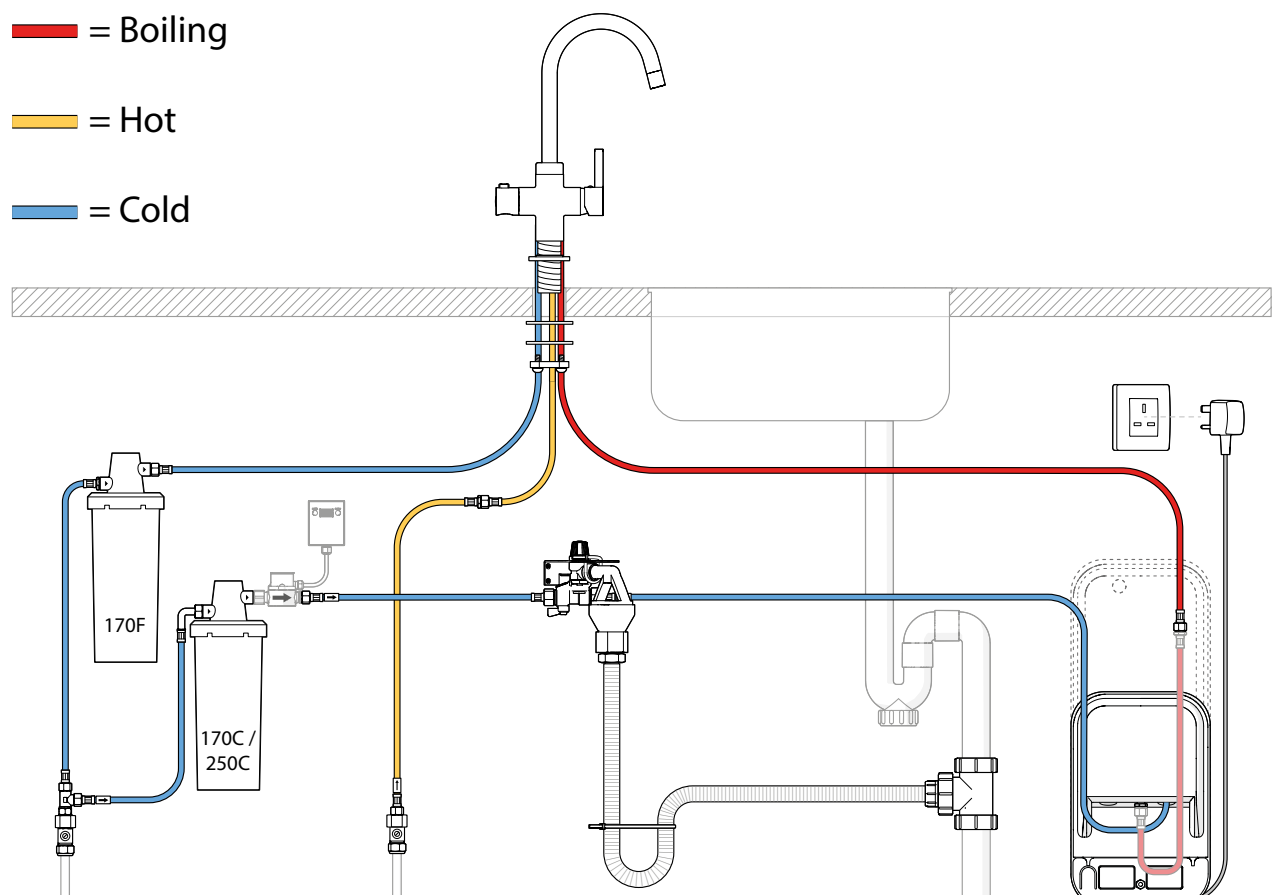

Installing a boiling water tap is relatively easy, especially for someone who is a bit handy and likes to do odd jobs. If that's not for you, you can always use our installation service.

Warranty

Our products are made with the greatest care. An eye for design, quality and sustainability. As a leading company in the industry, we guarantee excellent warranty conditions on all material or structural defects within the warranty period.

Our warranty periods are as follows:

2-year standard warranty

5-year warranty on registered products

20-year leakage warranty on the titanium tank for registered products

What is covered by your warranty

The warranty only applies if there are material and/or structural defects and if the defect is not the result of boiling dry, inadequate filtration of too hard or too aggressive drinking water or aggressive liquids. For more information, you can consult our full warranty conditions at <https://www.hotspot-titanium.co.uk/service/warranty/>

Your support

We offer you support in every area; from your order, to installation and far beyond. We rely on our products, our employees and our partners to provide you with the best possible service and support for your Hotspot Titanium. Through all this we ensure that you get the best quality water in your glass or cup!

Summary

Do you want to save valuable time, electricity and water? Hotspot Titanium offers the solution. You no longer have to wait for the water to boil. With Hotspot Titanium you can easily and quickly fill a tea glass or a large pan with 100°C filtered boiling water. You immediately get the right amount of water, so you waste less water.

A suitable boiling water tap for everyone

Our heaters with various capacities are designed to meet different requirements for use in the home. Hotspot Titanium combines luxury, convenience and durability in the kitchen. The 3-in-1 tap easily switches between cold, warm and boiling water. The filtered boiling water taps are available in various designs and finishes, so that there is a suitable filtered boiling water tap for every interior style.

Safety first

The filtered boiling water that comes out of a Hotspot Titanium has a smooth flow and does not splutter. So extra safe! All our taps are equipped with safety systems so that children

or people who have not used the tap before cannot unintentionally tap the boiling water from the tap.

Titanium

Why titanium? It is strong, highly resistant to corrosion and unlike other materials, resistant to scale build-up. Moreover, titanium never passes on its properties to the drinking water, so there is no aftertaste. The barrel lid, element, inlet, outlet and temperature sensor are all encased with titanium. We are the first-ever filtered boiling water company to have the water tank made entirely from high-quality titanium, with a 20-year leak-free tank warranty for absolute peace of mind.
