

B-PROTECT®

Product Profile

BAUWERK®

Parquet

B-PROTECT®

Bauwerk-Technology

With the new surface finish B-Protect®, Bauwerk proves once more that it is an innovator and is setting new standards in the sealing of parquet flooring.

Visually, the B-Protect® surface hardly differs from natural, untreated wood; functionally, it offers all the advantages of classic lacquer coating. Floors treated with B-Protect® do not need any special care, they are UV-stable, and 100 % healthy for living.

B-Protect® is an invisible, multi-layer lacquer treatment that is applied during the production process. Its unique composition completely seals the surface of the parquet. Also uniquely to B-Protect®, there are no changes in the colour of the raw wood material taking place, despite the lacquering. Surface testing has shown a reduction in the impact of UV radiation, with the original appearance of the surface lasting for years. Thus, B-Protect® offers an important feature that is unique compared to other lacquering systems.

B-PROTECT®

Advantages

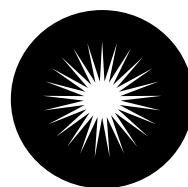

Natural Look

- › You can hardly tell the difference between B-Protect® and natural, untreated wood
- › Very matt finish

Best Protection

- › All the protective properties of a lacquer
- › UV-stable: minimum discoloration
- › 100% healthy for living

Easy Care

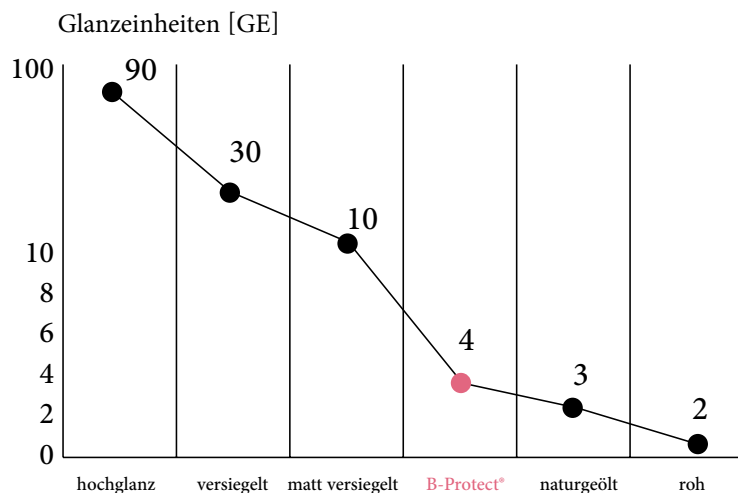

- › Very easy cleaning and care
-

B-PROTECT®

Technical information

Tiefer Glanzgrad

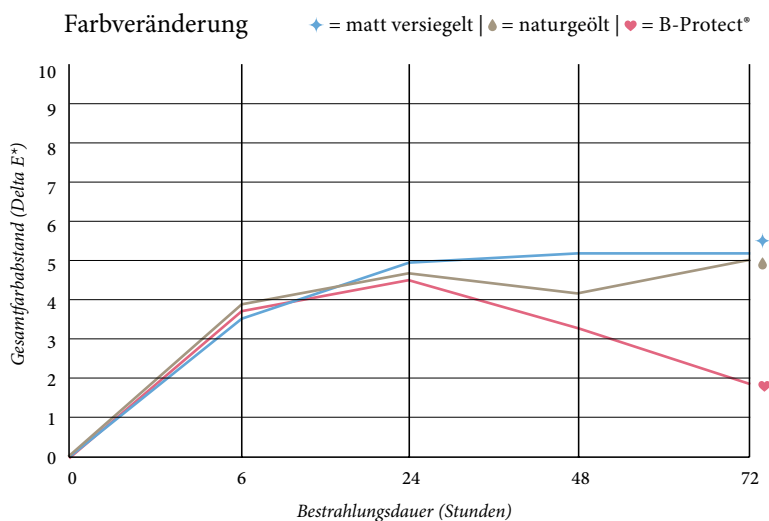

Der Glanzgrad der verschiedenen Surface Treatments unterscheidet sich stark. Die B-Protect-Oberfläche hat, verglichen mit anderen Versiegelungen, einen sehr tiefen Glanzgrad und somit eine matte und natürliche Optik.

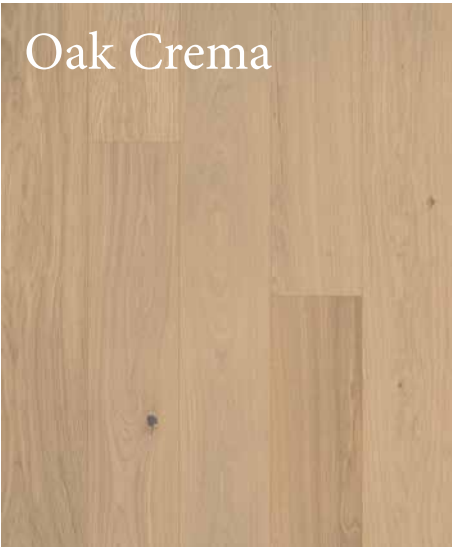

Bewiesene Colourchtheit

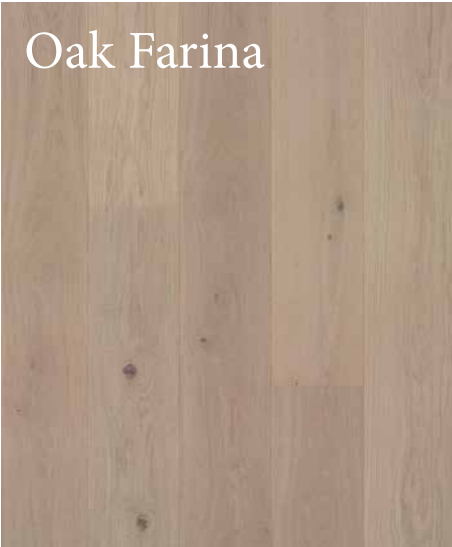

Neueste Erkenntnisse aus der Holzforschung* zeigen, dass die Farbveränderung in Folge von UV-Strahlung bei Parkettböden mit der Oberflächenversiegelung B-Protect® weniger als halb so gross ist wie bei anderen handelsüblichen Parkettoberflächen. Mit einem Wert von unter 2 Delta E* ist bei B-Protect® kein merklicher Farbunterschied mit blossen Auge zu erkennen.

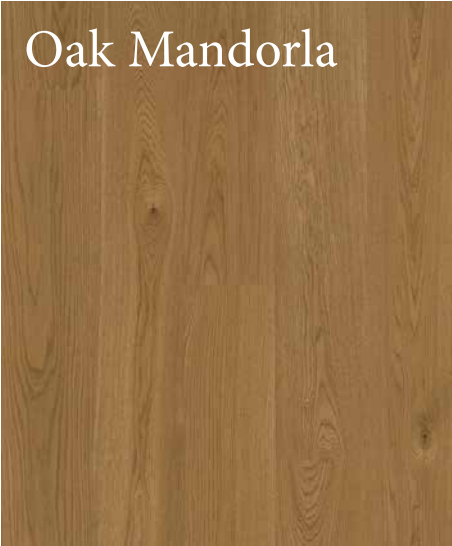

* Basierend auf der Prüfung der Lichtechtheit gemäss ÖNORM A 1605-12 (Parameter gemäss ÖNORM EN ISO 4892-2:2013 Verfahren B, hinter Fensterglas, Zyklusnummer 2) durch die Holzforschung Austria
