

CONSTIX™ Swab, SF-6

Sealed foam swab, flexible tip

Description

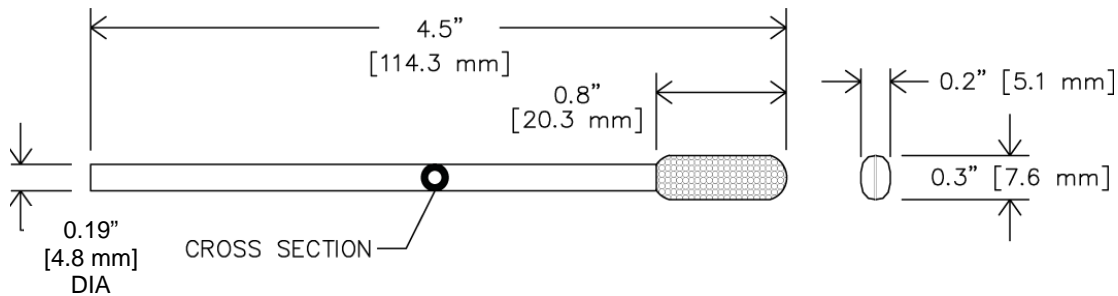

CONSTIX SF-6 sealed foam swab consisting of 100 PPI polyurethane foam adhesive-bonded to a flexible nylon tip. The tip is mechanically secured within a tubular polypropylene handle.

The polyurethane foam head provides good particle entrapment for removal and solvent compatibility. The absorbant foam enables solvents, such as isopropanol and ethanol, to be readily sorbed for applications involving solvent delivery or removal. The flexible tip allows for a softer application.

Though compatible with many common solvents, the SF-6 is not recommended for use with ketones such as acetone or MEK.

Technical Data

Swab head material	100 PPI closed-cell polyurethane foam
Swab handle material	Polypropylene handle and nylon tip
Construction	Epoxy adhesive of foam to tip; tip mechanically secured in tubular handle

Notes:

- 1) Data shown are typical values and should not be used as product specifications.
- 2) Valid product comparisons may only be obtained through side-by-side testing in the same test facility, under similar conditions.
- 3) Current and/or comparison data may be available. Please contact a Contec sales representative for details.
