

CONSTIX™ Swab, SF-7

Sealed foam swab, flexible tip

Description

CONSTIX SF-7 swab consists of 100 PPI polyurethane foam adhesive-bonded to a flexible nylon tip. The tip is mechanically secured in a tubular polypropylene handle.

The polyurethane foam head provides good particles entrapment and removal. The absorbent foam enables solvents, such as isopropanol and ethanol, to be readily sorbed for applications involving solvent delivery and removal. Head size enables access to small areas and crevices.

Though compatible with many common solvents, the SF-7 is not recommended for use with ketones such as acetone or MEK.

Technical Data

Swab head material	100 PPI closed-cell polyurethane foam
Swab handle material	Polypropylene handle and nylon tip
Construction	Adhesive-bonded foam to tip; tip mechanically secured in tubular handle
