

GTC-211

tube cleaning brushes

The Goodway GTC-211 blue nylon brushes with exclusive X-filament technology are Goodway's most popular tube cleaning brushes. These brushes are recommended for removing soft deposits (mud, algae, silt, etc.) in straight, ferrous, and nonferrous heat exchanger tubes. Combine with Goodway rotary tube cleaners and flexible shafts for the best cleaning results.

GTC-211 brushes are available for tube inner diameters 6,4 – 25,4 mm.

Tube cleaning applications

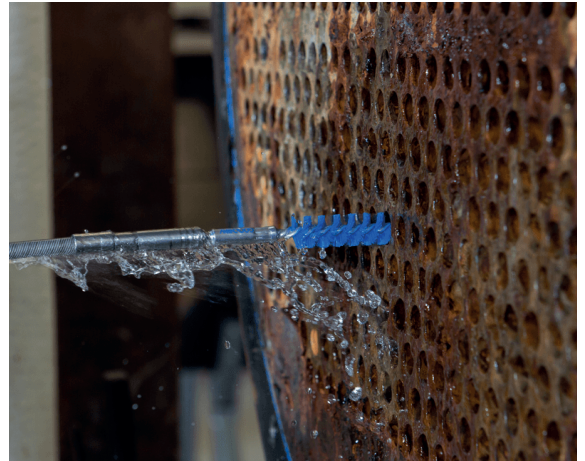

Absorption chillers

Water-cooled chillers

Use the GTC-211 brushes to remove soft deposits in heat exchanger tubes of: Carrier, York, Kelvion, TRANE, ENGIE, and Daikin machines.

Goodway tube cleaning systems

RAM-PRO

RAM-4

RAM-PRO-XL

GTC-211 brushes can be used in combination with any Goodway tube cleaning system and blue flexible shafts. These brushes are used the most with the above shown tube cleaners.

GTC-211 brushes are available in:

Quick connect

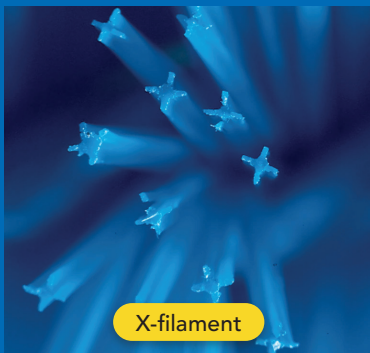

Standard threading

All Goodway chiller tube cleaning systems are supplied with a dual foot switch, therefore we recommend using quick connect accessories.

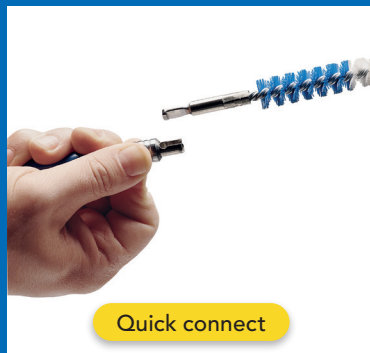

Features of the GTC-211 brushes

GTC-211 are durable and long-lasting brushes which are designed to remove deposits easily and quickly without damaging the tube material. Even delicate base metals like copper/nickel, titanium, and brass remain unharmed.

- 1 Exclusive X-filament technology improves the cleaning effect due to improved nylon strands.
- 2 Quick connect allows for quick changeover of brushes as well as bi-directional rotation.
