Pure water

The essence of
on-road convenience

 **Aquablu**[®]

Innovative purification solutions

Pure water

The ultimate way to hydrate your body

The Aquablu One is our most compact, smart controlled “plug & play” purifier. Designed to fit in locations where space is limited, the Aquablu One finds its way into kitchen cabinets all over the world. Embedded with our unique “Quality Control Technology”, the Aquablu One makes sure only 100% safe and healthy drinking water is dispensed. By using our App, NFC gives you direct insight into the both the drinking water quality and the technical status of your system. No more unnecessary visits, the App will guide you through the servicing process without a problem!

SAVE THE ENVIRONMENT

CONVENIENCE

SAFE DRINKING WATER

Directly from your tap!

Health, healthy, healthier

Aquablu is more than safe water; it's healthy alkaline water. After the purification process, minerals are added by the re-mineralization cartridge. This cartridge contains 8 essential minerals which gives the water similar qualities as pure, oxygen- and mineral- rich water from natural mountain top springs. These minerals allow your body to hydrate faster and quench your thirst.

Re-mineralization Cartridge

Intelligent control

To guarantee the safety of your drinking water, all models are fitted with an intelligent control system. This controller is able to activate all relevant flushes and displays real time data to the customer and Aquablu dealer. Whereas the customer is able to access all data using the Aquablu App, dealers or service providers can monitor their in-field systems using the Aquablu dealer portal. Whenever a technical problem should arise, our smart control panel allows dealers to service the system without ever having to leave their desk!

Purifier

NFC tag

Plug & Play

Delivered as a whole kit, including pre-filtration, purification, post filtration and a faucet, the Aquablu One is designed to fit under any sink! The pre-filtration cartridge, together with the purifiers heart piece; the membrane, are fully customizable to the raw water quality. This will provide the customer with the highest quality water in the most sustainable way.

Waste no more!

Why waste 9 liters of water to create 1 liter of clean drinking water? Here at Aquablu, we like to turn that ratio around! Our systems are carefully designed for locations where water is a scarce resource. Clean water is important and so is our environment!

Duplex pre-filtration, activated carbon & 5 micron filter cartridges

Membrane:	Ultra-filtration	10% Reject	150 l/h
	Nano-filtration	25% Reject	50 l/h
	Reverse Osmosis	30% Reject	50 l/h
	Supreme Osmosis	20% Reject	100 l/h

Dimensions: 400 x 220 x 100 (mm)

Power supply: 24 Volt (50Hz / 90 Watt)
