Pure water

The essence of
on-road convenience

 **Aquablu**[®]

Innovative purification solutions

Pure water

Tailor made solutions for the Expedition Industry

The Aquablu Pro is the ideal purifier for larger volume installations. Sharing the same advanced and easy to use technology as the Aquablu One, the Aquablu Pro is able to produce twice the amount of liters per hour. Thanks to its higher production volume, the Aquablu Pro is commonly installed at the water entry point. Thanks to the availability of storage tanks and smart monitoring, an unheard level of independence & comfort can be provided throughout the vehicle. Experience the power to transform any sweet water source into water of unmatched quality!

HIGH EFFICIENCY

SAVE THE ENVIRONMENT

SAFE DRINKING WATER

Directly from your tap!

Sustainable, safe & super convenient

A complete Aquablu Pro installation allows for the most sustainable use of your raw water in every respect. While all taps are provided with purified water, faucets can additionally be equipped with remineralization cartridges under the specific sink. These cartridges add eight essential minerals to the water, allowing you to experience drinking water of unmatched quality. Add sparkling & chilled options and allow Aquablu to perfectly substitute the need for plastic bottles! On top of that, water which is rejected during the purification process might be separately collected for outdoor washing purposes. Can it get any better?

Intelligent control

To guarantee the safety of your drinking water, all models are fitted with an intelligent control system. This controller is able to activate all relevant flushes and displays real time data to the customer and Aquablu dealer. Whereas the customer is able to access all data using the Aquablu App, dealers or service providers can monitor their in-field systems using the Aquablu dealer portal. Whenever a technical problem should arise, our smart control panel allows dealers to service the system without ever having to leave their desk!

Installation

The Aquablu Pro series is designed for simple installation, matching local standards for pipe connections and power supply. Thanks to it's compact design, it perfectly fits into areas where space is limited.

Waste no more!

Why waste 9 liters of water to create 1 liter of clean drinking water? Here at Aquablu, we like to turn that ratio around! Our systems are carefully designed for locations where water is a scarce resource. Clean water is important and so is our environment!

Membrane:	Ultra-filtration	10% Reject	300 l/h
	Nano-filtration	25% Reject	100 l/h
	Reverse Osmosis	30% Reject	120 l/h
	Supreme Osmosis	20% Reject	200 l/h

Dimensions: 490 x 440 x 130 (mm)

Power supply: 230 Volt (50Hz / 170 Watt) / 24 Volt
