Pure water

The essence of
on-board convenience

 **Aquablu®**

Innovative purification solutions

Pure water

The ultimate way to hydrate your body

The **Aquablu One** is our most compact, smart controlled “plug & play” purifier. Embedded with the latest monitoring technology, the One gives the customer a direct insight into the quality of their drinking water. NFC readout provides both the customer and the dealer with an overview of the technical status of the system. This allows dealers to remotely check the status of their in-field systems, smoothening troubleshooting and allowing automatic aftermarket service

SAVE THE
ENVIRONMENT

CONVENIENCE

SAFE DRINKING
WATER

Directly
from your
tap!

Health, healthy, healthier

Aquablu is more than safe water; it's healthy alkaline water. After the purification process, minerals are added by the re-mineralization cartridge. This cartridge contains 8 essential minerals which gives the water similar qualities as pure, oxygen- and mineral- rich water from natural mountain top springs. These minerals allow your body to hydrate faster and quench your thirst.

Intelligent control

To guarantee the safety of your drinking water, all models are fitted with an intelligent control system. This controller is able to activate all relevant flushes and displays real time data to you and your **Aquablu dealer**. Whenever a technical problem should arise, NFC readout allows the dealer to service the system without ever having to leave his desk!

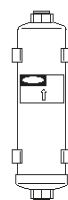

Plug & Play

Delivered as a whole kit, including pre-filtration, purification, post filtration and a faucet, the **Aquablu One** is designed to fit under any sink! The pre-filtration cartridges, together with the purifiers heart piece; the membrane, are fully customizable to the raw water quality. This will provide the customer with the highest quality water in the most sustainable way.

Waste no more!

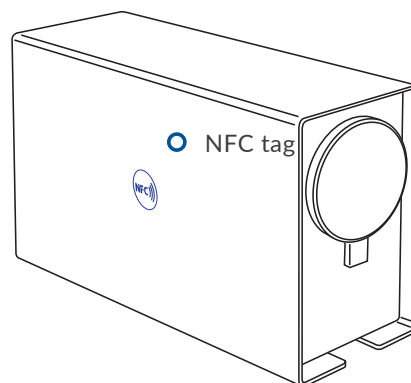

Why waste 9 liters of water to create 1 liter of clean drinking water? Here at Aquablu, we like to turn that ratio around! Our **membranes** have the following efficiencies:

Ultra Membrane	10% Reject (90% efficiency)
Nano Membrane	20% Reject (80% efficiency)
Reverse Osmosis	35% Reject (65% efficiency)
Supreme Osmosis	20% Reject (80% efficiency)
