Why Vauni	32
Technical specifications	34

It all began
with fire.

Since the dawn of man...

...our prehistoric ancestors used fire to keep warm, to cook, and to tell stories around. The ability to control fire has been an important part of human evolution and it was likely around the fire that we developed our language and shared our experiences. With that in mind, is it any wonder that fire still fascinates us and gives us an inner calm?

The Vauni Story

”Why isn’t there a fireplace that is beautiful to look at, flueless, eco-friendly and simple to install and use?” Sören Sjölander (professor emeritus of innovation engineering at Chalmers University of Technology) asked himself when moving from a house to an apartment and discovering that he couldn’t install a traditional wood-burning fireplace.

If what you want doesn’t already exist, then you just have to invent it. The first Vauni prototype was developed with designer Markus Grip in connection with his degree project at the Academy of Design and Crafts at University of Gothenburg. This combined the best of both worlds: cutting-edge aesthetics and technical innovation.

But that wasn’t enough for us. Safety is, of course, everything when you are designing with fire – your own safety and that of the planet. Only the safest solutions on the market are incorporated into our designs. Vauni’s burners actually absorb the fuel and keep it in place. Bioethanol is slow to burn off because only the fuel vapours burn, meaning Vauni’s products are ideal for use in the home and on yachts and houseboats, for example.

Our bioethanol fireplaces provide heat in a modern, eco-friendly way. The combustion process is completely clean and only small amounts of carbon dioxide and water vapour are produced – **just like in the air we exhale.**

– All materials are chosen to chime with the fire’s values and to express aesthetics, quality and warmth.

Making fire a living part of your home

One great advantage of Vauni’s fireplaces is that they can be positioned exactly where you want. They come in designs and sizes to suit most rooms and, because there is no permanent installation, you can move the fireplace as you fancy, just like any other piece of furniture.

The fireplace naturally makes an attractive focal point in the living room, where family and friends gather around the warm glow of the burning fire. Placed in a large hallway, it creates a welcoming ambience when guests arrive.

Not to mention how cosy a bedroom becomes on a damp autumn evening, when all you want to do is tuck up in front of a fire with a good book.

The heat output is 2 to 3 kW depending on the model, which is roughly half that of a wood-burning fireplace. This produces a pleasant heat, without making the room too hot. Put simply, a fireplace adapted for modern houses.

Moreover, our bioethanol fireplaces provide heat in a safe and environmentally-friendly way.

The design process

Designing a fireplace that paraphrases a traditional wood fire presents a considerable challenge. That is never to lose sight of the genuine feelings that a fire inspires – warmth, harmony and community – during the design process.

Vauni’s design philosophy is based on the user’s emotional need for fire. A great deal of care goes into ensuring that our products are flexible and appealing to people with a variety of needs, tastes and lifestyles.

We design unique products that communicate with the user. All materials are chosen to chime with the fire’s values and to express aesthetics, quality and warmth. As a result, the fireplaces are always beautiful, whether a fire is burning in them or not.

Markus Grip, MFA
Head Designer Vauni

Made in Sweden

The long and chilly Nordic winter has helped make the fireplace a natural feature in many homes.

Swedish innovators, including engineers from Chalmers University of Technology and designers from HDK – Academy of Design and Crafts at University of Gothenburg, have devoted a great deal of time and energy to the development of Vauni's fireplaces. As innovators, we also, of course, have to consider the future – by keeping our production in Sweden we secure short transport routes and contribute to a more sustainable society.

The Vauni spectra

Each product from Vauni has a personality and unique feel of its own. The right colour, tone and intensity are needed to invoke the right feel. Then the right finish has to be chosen to provide lustre. There's a lot that has to be just right, in other words, and that requires time and care.

Our spherical fireplaces Vauni Globe and Vauni Cupola (wall-mounted) are available in several different designs. They come in timeless black and white as well as a carefully selected range of design colours.

We also work with different materials and colours for our inserts. For these we offer a choice of darker **Mystic Graphite** or lighter **Mystic Sand**. These are manufactured by MBJ Design and are made of 100 % real mortar.

This offers numerous options for choosing a fireplace that is perfectly suited to your home and personal preferences. So you can create the home you deserve.

Vauni Globe

As spherical as the name suggests, the design and size of the popular Vauni Globe makes it fit into all conceivable interior styles. Designed for maximum comfort and safety, the Globe consists of several smart features and guarantees a fireplace that will make you yearn for pleasant fire evenings during winter as well as summer.

Combine colour, stand and insert to customize the Globe to your personal taste. Globe is available in classic black or white, but also a carefully selected set of design colours. The insert around the burner is available in a variety of finishes. You can choose Cast Iron, which is a black cast iron finish, or, for a more exclusive look, moulded concrete from MBJ Design in two colours: **Mystic Graphite** or **Mystic Sand**. Choose your Globe on either low or high stand.

Vauni Cupola

With a hemispherical shape similar to the Globe and a light-weight aluminium body, the Vauni Cupola clearly carries the Vauni identity. Its pioneering design and smooth wall installation make for an ideal interior element in the living room, bedroom or anywhere you'd like a mood booster.

The classic, clean shape and compact format ensure that this fireplace perfectly complements modern interior design styles. The characteristic profile, in lightweight aluminium, makes it a unique interior design feature. Cupola is as easy to mount on the wall as a flatscreen TV. Just like Vauni's other models, Cupola is flueless and equipped with the market's most advanced bioethanol burner – which burns without smoke, soot or ash. It produces a pleasant heat and the size of the flame is infinitely adjustable. The result is a safe, no-fuss flueless fire.

Vauni Divider

Optimized for full flexibility, the Vauni Divider enhances any room with an exclusive feeling and a warm atmosphere. Its clean glass shapes give the impression of an art installation, and the mobility makes it fun to try out new refurbishments. As easy to use as the simplicity of the design, the Divider is a necessity for the fireplace-lover.

Divider is equipped with the market's most advanced bioethanol burner – which burns without smoke, soot or ash. It produces a pleasant heat and the size of the flame is infinitely adjustable. Divider is available in three different designs: A black base with a brushed stainless steel top or, for a more exclusive look, a brushed stainless steel base with a moulded concrete top from MBJ Design in two colours: **Mystic Graphite** or **Mystic Sand**.

Vauni Edge

Regarded as one of the world's flattest fireplaces, the Vauni Edge looks like it's built into the wall. The typical Scandinavian design adds a timeless, sleek look to your home, while not taking up any space on the floor. With Edge you get a modern and simple fireplace that complements your home, regardless of the interior style. Order your Edge in classic black or white, or for an extra sophisticated look: stainless steel.

Thanks to the low temperature behind the heat source and easy installation, Edge can be mounted on all types of rigid wall. Its slim design makes the fireplace look as if it has been built into the wall.

Vauni Shadow

The Vauni Shadow fireplace is characterized by pure, elementary lines and a glass front which serves as protection for children and pets. The yellow flames get a greater contrast thanks to the dark background, and provide a calming heat source for loved ones. Shadow incorporates all features that are typical of Vauni products – it's flueless, safe, elegant and practical. Order your Shadow in classic black, or white for a more stylized look.

The safety glass front lends Shadow an elegant appearance. It is also a practical feature, as it protects the fireplace but can easily be opened to access the burner. Thanks to the low temperature behind the heat source and easy installation, Shadow can be mounted on all types of rigid wall. Its slim design makes the fireplace look as if it has been built into the wall.

Vauni Re:burn & Re:build

Vauni's bioethanol burners are the ideal solution for when you want to design your own fireplace, and they give you the freedom to update it when necessary or when inspiration strikes. Two models are available, Re:burn and Re:build, which both come in two sizes.

RE:BUILD

Re:build is designed for embedding in fireproof materials such as brick or stone. This burner has a minimalist design, where the fire itself takes centre stage. If you want a truly grand result, you can place multiple Re:build burners next to one another.

RE:BURN

Re:burn can easily be placed in existing fireplaces, and is ideal when you have a tiled stove but want to avoid the hassle of firewood and soot. The advantage of Re:burn is that it is a very flexible product, and is just as easy to move around and reposition as a chair. You can place it in your tiled stove during the dark winter months, and then move it out onto the patio in the summer!

Vauni Biofuel

PREMIUM

Ecoflame Supreme is our brand new fireplace fuel and, as its name suggests, is superior to any other. We have developed Ecoflame Supreme in response to the various wishes of customers to fill the gap in the market for a really odourless fireplace fuel. Ecoflame Supreme is the most advanced fireplace fuel in the market today and is our contribution to try to meet the exacting demands of customers. Quite simply, it is a superior fireplace fuel.

Vauni Ecoflame biofuel is currently only sold in Sweden. Products of a similar quality are usually available in most markets. It is normally possible to purchase these from specialist online stores as well as DIY stores and larger supermarkets. If you are unsure which fuel or grade of fuel you require, always ask the advice of the staff at the store or contact us.

SUPREME

Vauni's flueless fireplaces are fueled with high-quality bio ethanol which is a modern, simple and climate-friendly way to enjoy a fire in your home. Our fireplace fuels in the Ecoflame series are of the highest quality available in the market today and are totally soot and ash free. Ecoflame Premium burns longer and produces beautiful, lively flames. Ecoflame Premium is, of course, environmentally-friendly, biodegradable and 100 % renewable.

Why Vauni

Swedish innovation and manufacturing

In Sweden, dark winter evenings and chilly nights have given us a very special relationship with the fireplace. Vauni's fireplaces are the result of close collaboration between Swedish designers and innovators from the Academy of Design and Crafts and Chalmers University of Technology in Gothenburg. As innovators, we also, of course, have to consider the future – by keeping our production in Sweden we secure short transport routes and contribute to a more sustainable society.

Simple

The easiest way to light a fire. It has never been easier to have a fireplace at home. User-friendliness is one of the biggest advantages associated with this flueless technology. All you need to do is add bioethanol, light the fire and adjust the flames. Extinguish! Forget ash, soot, smoke and having to bring in wood. No fuss, just pleasant heat.

Heat

Vauni's fireplaces are flueless and run on pure bioethanol. This means that the energy supplied goes straight into the room in the form of a pleasant heat, instead of being lost up the chimney as is the case with conventional wood-burning fireplaces. The heat output is 2-3 kW depending on the model, which is roughly half that of a wood-burning fireplace. This produces a pleasant heat, without making the room too hot. Put simply, a fireplace adapted for modern homes.

Safe and secure

When we design a fireplace, we start with the best solutions. And when it comes to construction, we incorporate the safest solutions on the market. Our aim is for you to have a safe fireplace with optimal functionality. Our bioethanol burners have unique features in terms of function and safety. You will also appreciate the flame's soft-start function, the heat it produces, and its light intensity. Naturally, all our products are certified and type approved by KIWA.

Economy

A fireplace to count on. If you are considering getting a fireplace at home, Vauni is one of the most cost-effective solutions on the market. The biggest saving is that you don't need costly chimney or flue installation. Thanks to the energy-efficient technology used, the running costs are also advantageous compared with using gas or purchased wood.

- The total cost (purchase and installation) is lowest for bioethanol, followed by wood and gas.

- The running costs for wood and bioethanol are very similar, while gas is most expensive.

- There are also maintenance costs, such as chimney sweeping, to consider with wood and gas.

Ecofriendly

Our bioethanol fireplaces provide heat in a modern, ecofriendly way. This means that the combustion process is completely clean, and only small amounts of carbon dioxide and water vapour are produced – just like in our exhaled air. That is why Vauni does not require a chimney or flue and why you can put the fireplace in any room you want. Our own fuel Vauni Ecoflame is optimised for bioethanol burners. In addition, it is odour neutral, biodegradable and 100 % renewable.

Globe

Dimensions (w×h×d): 600×610×580 mm / 600×900×580 mm

Weight: from 40 kg
