5. If you press cancel button, all the function will stop and the vacuum head will go up automatically.
(If error occurs, press cancel button and all function will return to the beginning.)

Button function explanation

[Power]

- Placed on the right bottom side, if you plug in the power plug and press power button, light will be on in lamp and wait for operation.
- After using the product, press power button to off the power and plug off the power plug.
- If vacuum glass cup is not fitted well after power button is on, light will be on only in vacuum mode.
- Light will be on in every function (vacuum blend, vacuum, pulse blend, rhythm blend) when you fit vacuum glass cup set normally. When it doesn't light, it means vacuum glass cup set is not fitted in main body so please check combined statement.
- Only the vacuum mode will be lighted if you put vacuum container on main body and only the vacuum function will work.

[Vacuum Blend (automatic)]

- Vacuum blend is a function which vacuuming and blending work together.
- After adding ingredients in the container and set in to the main body, press vacuum blend button. Vacuum head will automatically come down and start working.
- It is easy to use since it doesn't need any extra control for vacuuming and blending.
- Explanation of action statement
 1. Vacuuming starts after pressing vacuum blend button. Vacuum head will automatically come down to operate function.
 2. LED Display shows vacuum action statement.
 3. When vacuuming is done, blending works for a minute. (LED Display shows time)
 4. Press cancel button when blending is done, vacuum head will go up and vacuum blend function becomes completed.

[Vacuum]

- Vacuum function is for using only vacuuming function without blending function whenever you want.
- Vacuum head part will come down and vacuuming will start after combining with main body when you press vacuum button.
- You can use other functions (vacuum blend, instant blend, rhythm blend) immediately after vacuuming.
- Vacuum function gets completed when you use vacuum container and when you press cancel button, vacuum head goes up and vacuum keeps remain. You should clear the vacuum with air release cap in order to open the container.

[Pulse]

- Pulse is for instant blending without vacuuming.
- When you want to use only the blend function without vacuuming, equip the glass container and press pulse button. First press will make vacuum head goes down and second press will start the operation of pulse.

[Auto Blend]

- Auto Blend function is to blend repeatedly with soft and strong motion.
- It automatically operates for a minute and you can check action time in LED display.

[Cancel/Finish]

- It is to stop all the function compulsively.
- If an error occurs, alarm will be on and LED display will flicker. In this case, please press cancel button.
- Head goes up when you press cancel. Head doesn't go up even when operation is finished.

How to use the product

1. Open the lid and put food ingredients and close the lid. Equip the glass container and lid tightly.
(If not, vacuum function might not work properly.)
2. Equip the main body into the operation part.
3. Turn the arrow on body of blade clockwise to closed lock sign.
4. Press the power button and select function you want to use.
 - After choosing function, LED display shows the statement of cooking.
5. Check whether glass container is equipped well.
 - If not, power button will not work.
 - when equipping vacuum container, only the vacuum button will be lighted.
6. After operating vacuum blend or vacuum function, open the air release cap first to relieve vacuum.
Lid will not be opened when vacuum is not relieved.

Please check before making inquiry

1. Isn't product working?
 - Please check the plug.
2. Did the product stop working while operating?
 - Please check the plug.
 - Did you use it for a long time? If motor is overheated, it stops automatically to avoid an accident and starts to operate when it cools down. Please cool it down for half an hour and re-start it.
 - Please check whether food ingredient is stuck in the blades.
 - Please check whether air release cap is open or glass container is unequipped from the main body.
3. Isn't the food ingredient grinding well enough?
 - Please check whether you put too much ingredient in it.
 - Please check the rated voltage. This product is for 220V.
4. Does food ingredient leak?
 - Please check assembled part of blade body and glass container.
 - Please check whether lid or packing of blade has damage. If so, please contact customer service center.
5. Doesn't vacuum work?
 - Please check the assembly of all parts.
 - Please check if lid is dirty. If so, please clean it.
 - Please check whether lid or container fits tightly.
 - Please check if packing is damaged.
 - Please check if air release cap is equipped tightly.

Error			
Problem	Vacuum time over	Drop time of the head is too long	Pressed button
Cause	① Pressure loss due to wrong assembling of lid packing ② Non assembling of lid packing or blade body packing	① Non assembling of glass container set ② Omission of glass container lid ③ Non assembling of vacuum container set	Assemble the defected component
Solution	① Re-assemble the lid again ② Check the components and re-assemble	① Re-assemble glass container set ② Re-assemble glass container lid ③ Re-assemble vacuum container set	If problem still occurs, contact A/S center
