

Nonstop and save – devices with automatic electrolyte supply

Due to the automatic electrolyte supply of the Clean Marker Brush-IT P (pump devices) the cleaning and marking agents are dispensed economically and straight to the point.

The liquid supply happens outside of the device, due to this the device is protected against staining and chemical burn.*

| Model | Brush-IT-P |
|---------------------|---------------------------|
| Capacity | 1500W*, 2500W oder 3500W* |
| Operating voltage | 230 V, 50 – 60Hz |
| Protection class | IP 23 |
| Size B x W x T (mm) | 180 x 320 x 430 |
| Weight, ca (kg) | 7,5 kg 6 kg* |

* Weight for device without marking function

* The surface cleaning tools can't be connected to the pump-system.

Product benefits

- No liquid tank, so there is no spill during filling
- No remaining residues in the device.
- Easy cleaning of the pump system. After a brief rinsing, work can be restarted with another electrolyte immediately.
- Liquids can be stored stable and safe outside the working area.
- Supply distance up to 8 m.
- Allows working even in difficult positions (on ladders, in containers)

A continuous feed of electrolyte makes working more efficient.

The pickling tools don't have any contact to the stored liquids, so the electrolyte stays clean from any contamination transferred from the tool.

No matter whether with brush or electrode attachment, the electrolyte is simply fed on demand. The perfect dosage of electrolyte is guaranteed and does not depend to the device location.

Connection for the pumping hose. From here it's possible to work in a distance of up to eight meters.

Brush-IT devices with 4 different equipment-kits

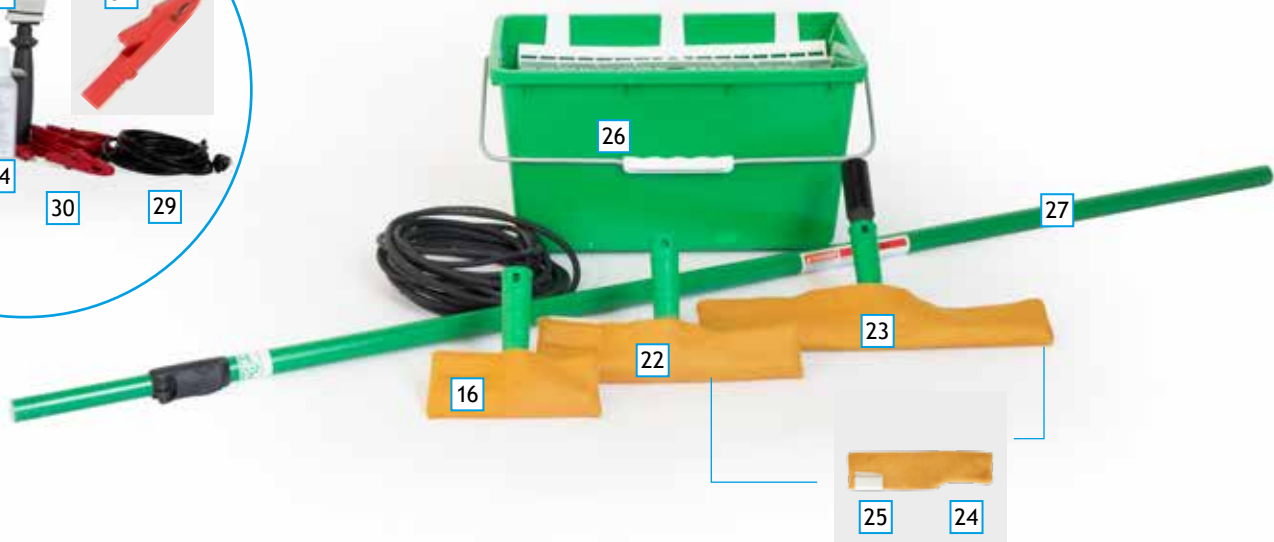

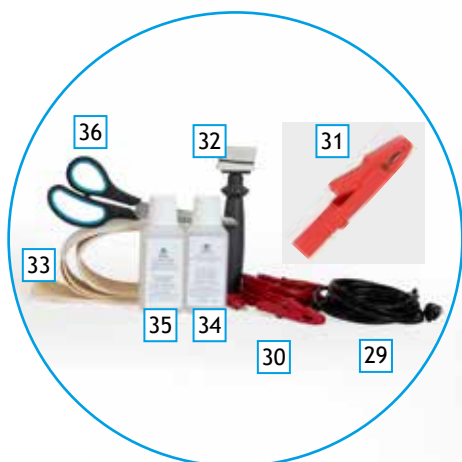

For any requirements, all Clean Marker IT devices are delivered with four handy equipment-kits.

Set 1 „Cleaning-kit“: Small set especially for marking

Set 2 „Pro-Kit“: for cleaning and marking

Set 3 „Surface-Kit“: With surface cleaning tools for large area usage

Set 4 „Surface-Plus-Kit“: With telescopic rod and further surface cleaning tools
