Care & Maintenance

Our designs are all made in durable and high quality materials.

We hope they will bring you joy for many years to come and if you follow these simple maintenance steps, you can prolong the lifespan of your product.

Be careful not to place your product in direct sunlight, as the textile may fade over time.

Vacuum clean your product with a soft brush approx. every second week.

Stain removal guide

1. Vacuum the product. If any wet stains, dry them with a clean towel
2. Place a clean and dry towel in between the foam and textile where the stain is located.
3. Use a clean well-wrung cloth to squeeze out a moderate amount of water onto the stain and 5 cm around it.
4. Add a tiny amount of neutral soap to the well-wrung cloth and carefully clean the stain with circular movements. Do not wipe outside the wet area, as this will cause a water blemish.
5. Wash away the soap with clean water by squeezing it out of the well-wrung cloth just as in step 3.
6. Remove the towel in between the foam and textile and replace it with a dry one. Let it dry until next day
7. If the stain is still visible the following day, repeat the process or remove the remaining with a steam cleaner

Always feel free to contact us for further guidance:
