

Glazer 1500

The fuel effects must be positioned as in the images below.

Care must be taken to ensure the channel at the front of the fire is not obstructed. Anything dropped into it, must be removed before installing the front glass panel.

Radia Flame Log Bed

For the best possible log burn, place only a thin amount of the grey chippings around the perimeter on the fuel bed.

Nitra Flame Log Bed

Using the three bags of clear glass chippings, lightly fill the inside of the fuel bed, leaving clear only a small area around the perimeter

For the best possible log burn, place only a thin amount of the grey and black chippings around the perimeter on the fuel bed.

1500 Logs
