

1. Place the large part (the upper section) of the lamp holder upside down.

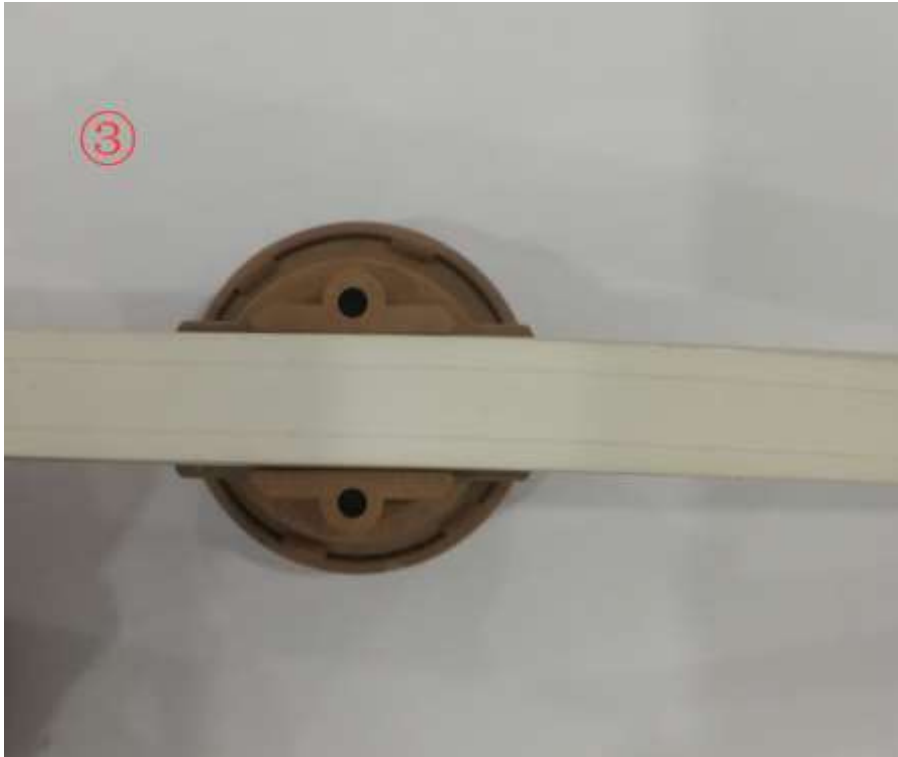

2. Place the two inner sealing rings onto the lamp holder over the two pins.

Important: This step must be carried out carefully to ensure the lamp holder is splash-proof.

3. Place the cable into the groove in the lamp holder.

4. Place the smaller part (the base) of the lamp holder on top.

5. Tighten the two screws.

6. Place the two cover caps over the screws (glue is not required).
