

Dual Color

This model has 3 wires, a common plus and minus for each color. By moving the minus from one to the other, you must not have both colors on at the same time.

Connection:

- Brown wire plus
- Green wire minus = Yellow
- White wire minus = White

Mounting

There are M5 threaded inserts in the shield which makes it easy to mount with M5 bolts, or you can choose to glue it in place. A total of 7 bolts are required.

Be sure to use stainless A2/A4 bolts.

Finally, glue the original SCANIA sign on top with the double-sided adhesive tape.

There is a 3 meter cable on both parts of the light base.
