about us

TurboTronic® is the brand when it comes to household and kitchen appliances owned by the family business Z-Line. Z-Line, with its head office in Belgium, the heart of Europe, has been a professional importer of kitchen and home appliances since 1992. Only merchandise that meets strict European standards will be imported by them and checked by the best quality control facilities.

All **TurboTronic®** products are made from only the best materials to make your life easier, healthier and of course tastier. Z-Line stands behind every **TurboTronic®** product. Each device is individually and fully tested; our 24 month warranty proves it!

TurboTronic® has an intrinsic, timeless elegance combined with a uniquely intuitive operation. We design household and kitchen appliances with both good looks and faithful efficiency that you can enjoy for years to come. In addition, the range has been expanded with a sports line for an active lifestyle, called SportTronic.

The name **TurboTronic®** reflects our identity and is contemporary in both design and functionality. We are broadening our concept; we not only stand up for a better environment, but also for a better world.

The company philosophy is based on our three core values:

INTEGRITY

We are not afraid to take a stand on important social issues and we acknowledge and honor others who are doing the same. We stay true to who we are, to our style and beliefs.

QUALITY

Our products last a long time, both in terms of high-quality machine parts and the timeless design that makes them easy for everyday use.

STYLE

We create styles that last and we stay true to our design philosophy; TurboTronics united classic style with modern shapes. Our style is feminine and sensual, but with fast and masculine qualities.

PRODUCTION: Development of new technologies is a thrilling process. Virtually every day, in every moment, a new idea is born somewhere in the world, a new scientific breakthrough is completed, and a new finding is arrived at. However, technology should not and cannot be an end-state to itself. Therefore, we are starting at the other end: at your home. you are our inspiration for development of technologically perfected solutions.
