

Powerful, enhanced, and productive

Sleepware G3 diagnostic software

sense and simplicity

One software interface, multiple data workflow benefits

When it comes to diagnosing your patients, you and your staff members now can have a more enriching and productive experience. Our entirely new, powerful, and easy-to-use Sleepware G3 sleep diagnostic software gives you control and protection against unwanted access to patient data. It also provides the ability to create various user-logins to conform to your lab workflow.

Better meet your workflow needs

You can now better meet your workflow needs, regardless of the size of your lab, as Sleepware G3 is flexible and highly adaptable. With its all new, robust platform, and enhanced functionality, you'll be able to:

- Facilitate data integrity and consistency
- Enable supervisors to have more control over user group privileges and workflow
- View and customize patient data to meet specific user needs
- Create workspace "favorites" to help enhance efficiency
- Create flexible or restricted program preferences
- Realize an integrated channel view with more meaningful parameters
- Extract the relevant data needed to better determine appropriate patient treatment plans

Customize the user login and workflow management capabilities to allow users to access only the work assigned to them, and access the recently opened acquisitions unique to them.

Improved workflow and customized preferences

Sleepware G3's intuitive interface and user-friendly functions are designed to help enhance your workflow and customization preferences.You can easily:

- Record and simultaneously view data acquired by our Alice in-lab systems or our Alice PDx portable diagnostic system
- Limit Sleepware G3 access for patient confidentiality through support of IT Domain or Sleepware G3 application access logins
- Integrate a SQL database for workflow management and monitoring of study workflow state
- The database also provides control over groups and user functions; users may be part of multiple groups such as acquisition and scoring techs

Enhanced data acquisition, review, and scoring

With Sleepware G3, you can:

- Configure workspaces within the data view to see your changes as you make them
- Create an unlimited number of workspaces that can be shared, and enforced for certain groups, or enabled for individual use
- Add comments at any time or use the new "Bookmark" feature to draw attention to unique areas requiring close inspection by a scorer or physician
- · Create multiple time synchronized data views
- Control functions on Philips Respironics' therapy units through on-screen software controls
- Navigate easily with the tabbed user interface
- Adapt Sleepware G3 to your staff's scoring styles

Unlike other software platforms, Sleepware G3 remembers not just the last event marked but the last event marked for each channel.

Group and user management

Groups			×
Group /	Description	Add	
Acquisition Techs Global Administrator Physicians	Administrator that has all privileges Physician Review of Acquisitions	Modify	
Reporters Scorers	Can generate reports Score Acquisitions	Delete	
		OK Cancel	
Shared Options			

You can define specific access privileges for each user group you create. This allows you to control "permissions" for various users within your facility. You can also define user access logins and assign them to the appropriate functional group(s).

Multiple functionality suited to your lab needs

Sleepware G3 can help you meet the data management needs of your lab and staff. Its software platform incorporates enhanced functionality and performance levels.

- Full network support to expand program utility and data storage (supports 32 and 64 bit Windows operating systems).
- Compliant with the AASM scoring manual guidelines and International Professional standards.

Capture synchronized MPEG-4 digital audio and video with your sleep study data and enable pan-tilt-zoom controls (when using a compatible camera). MPEG-4 also allows you to play video outside of the Sleepware G3 platform.

Data management files are safeguarded

You get protection against loss of valuable acquired sleep data and the option to store the data as desired. You can archive data to any computer, network drive, or flash media.

Reporting functions

You can be up and running quickly with reporting capability using Sleepware G3's comprehensive set of reports. You'll also be able to continue using customized reports created in prior Sleepware versions using rich text format (.rtf) templates that are compatible with Microsoft Word.

You can still insert graphic trends, text and sleep data, and digital still photos into reports. Reports are compatible with any printer supported by Microsoft Windows.

Sleepware G3 and BiPAP autoSV exclusive composite channel

Sleepware G3 introduces an innovative new composite channel type that is especially useful when evaluating the Philips Respironics BiPAP autoSV on your more complex patients. This new channel incorporates multiple therapy setting and patient pressures into one composite display (on a breath-by-basis or in a trend format). This enables you to assess patient needs quickly and respond with the appropriate treatment settings. Only Philips Respironics and Sleepware G3 can provide this advanced composite channel.

Configure Sleepware G3 to your workflow preferences

Shared Options		User Specific Options				
Analysis Parameters Auto Save Channel Colors Custom Events Event Filters Event Filters Event Options Naredefined Comments Report Calculations Report Generation Trend Labels Working Folders	*	■ Scoring Styles ParSleep Staging				

The "shared options" dialogue offers the ability to define and control which functions are shared among all users versus individual users (e.g., scoring styles capability).

The "event option" dialogue provides the ability to define how events appear in the raw data views and in the new tool-tip information screen.
