

Box of Doom

Isolation Cabinets

CAT6 upgrade kit

Awesome! you got yourself an upgrade kit to get your Box of Doom ready for the Dynamount X2-R micro. The upgrade is relatively simple. You only need an allen wrench (3 mm) to replace the grill on the inside and a drill ($\varnothing 6\text{mm}$ will do) to remove the rivets of the grill on the bottom side.

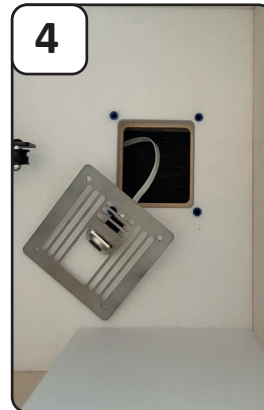

1
Disconnect en remove the speaker and remove microphones.

2
Remove the foam.

3
Remove the four screws using an allen wrench.

4
Connect the CAT6 cable and slide it into the venting shaft.

5
use the screws to fix the new dish and reinstall the foam.

6
Gently place the BoD on its side, put a piece of paper on the floor (to collect the iron filings) and use a drill ($\varnothing 6\text{mm}$ or bigger) to drill out the cap of the rivets.

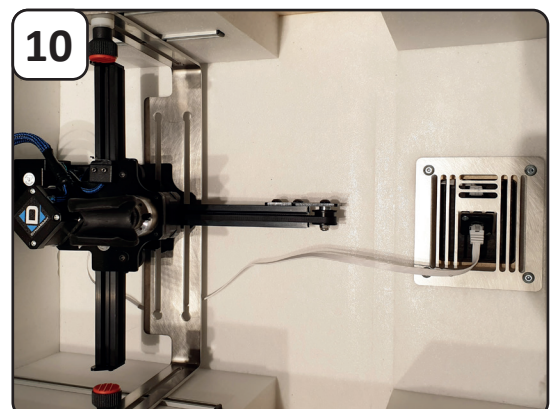

7
Remove the grill and chamfer the protruding ends of the rivets. Just to make it level with the top of the wood.

8
Grab the CAT6 cable and connect it to the connecting on the dish.

9
Clean the bottom of the case with a degreaser and remove the protection from the tape. With some presure stick the dish to the Box of Doom.

10
Put the BoD back on its wheels, connect the cable to Dynamount, slide in the speaker and you are ready to use the Dynamount.
