

IN2-CONCRETE

IN2-FASTER

PRODUCT DESCRIPTION

IN2-FASTER is a hardening accelerator with plasticizing effect that accelerates the binding process of fresh concrete.

When pouring concrete below 10°C, the binding process slows down. That can cause insufficient compression strength at the start.

IN2-FASTER accelerates the hardening process, allowing you to work normally even with low temperatures.

ADVANTAGES IN2-FASTER

- + Concrete hardens faster
- + Process concrete normally in low temperatures
- + Easy to use

HOW TO USE

Add IN2-FASTER to the ready-mixed concrete and respect a minimum mixing time of 1 min / m³, dosing 1,0 - 4,0% on the cement weight.

SPECIAL CONSIDERATIONS

- Don't use when it freezes. Then there is only one solution: don't pour concrete
- Kan react with strong reducing agents and oxidizing products

TECHNICAL INFO

Shape	Clear, odourless liquid
Vlampunt	Not applicable
Ontvlambaarheid	Not explosive
Freezing / melting point	782 °C
pH:	7-11 in 10% watersolution 0,1 Pa (20 °C)
Vapour pressure	2,15 (25 °C) - 2,15 (25 °C)
Relative thickness	745 g/l (20 °C) - 1590g (1000 °C)
Solubility	Soluble in water
Packaging / storage	Store in a cool and well-ventilated place in a closed package. Protect against moisture.
Dilution	Mix with clear water with a dosing of 1,0 - 4,0% on the cement weight.
Verbruik	1,0 - 4,0% on the cement weight.

DESCRIPTION

IN2C-FASTER-010

IN2-FASTER 10L

HEALTH AND PROTECTION

Safety is not expensive, it's priceless. Always work safe!

- No special ventilation needed.
- Wear safety glassed gloves and work clothes.
- Mouth mask not necessary.
- Avoid contact with eyes.
