SOFTWARE IDC5

IDC5 es la última evolución de TEXA, gracias a la reescritura del código se incrementa la velocidad de trabajo, lo que garantiza una entrada de comunicación con la centralita casi inmediata. La nueva función "Esquemas eléctricos interactivos" permite consultar los esquemas eléctricos aprovechando las animaciones de los dispositivos implicados y generando un mapa interactivo con flujos de señales entrada o salida de centralitas.

SOFTWARE IDC5

IDC5 is the latest evolution of TEXA, thanks to the rewriting of the code the working speed is increased, which guarantees a communication input with the control unit almost immediately. The new function "Interactive electrical diagrams" allows consulting the electrical diagrams taking advantage of the animations of the devices involved and generating an interactive map with flows of signals input or output of control units.

NAVIGATOR TXB EVOLUTION

The evolution of the diagnosis, designed and developed specifically for the marine environment.

The characteristics of the hardware make it compatible with all currently existing protocols, its integrated 16-pole CPC connector, allows the use of all diagnostic cables. It is compatible with AXONE NEMO and PC. Thanks to Bluetooth technology, the technician can make a comfortable diagnosis without wires, even from the jetty.
Extremely powerful, they allow the mechanic to easily manage the map files. The CAN standards supported include the possibility of CAN single wire management and a further CAN controller for the diagnosis of more networks.
It allows the recording of the diagnosis session in “dynamic tests” mode, that is to say with the boat in motion, to locate specific faults that could not be verified in the mooring. The interface reconstructs a complete panorama of the situation in which the anomaly has been verified, providing important elements of analysis to identify the causes of the failure.

NAVIGATOR TXB EVOLUTION

La evolución de la diagnosis, diseñado y desarrollado especificamente para el ambiente Marino.

Las características del hardware lo compatibilizan con todos los protocolos actualmente existentes, su conector CPC de 16 polos integrados, permite el uso de todos los cables de diagnosis. Es compatible con AXONE NEMO y PC. Gracias a la tecnología Bluetooth el técnico podrá realizar una cómoda diagnosis sin cables de por medio, incluso desde el pantalán.
Extremadamente potente, permite al mecánico una gestión fácil de los archivos de mapa. Los estandares CAN soportados incluyen la posibilidad de gestión CAN single wire y un CAN controller más para la diagnosis sobre más redes.
Permite la grabación de la sesión de diagnosis en modalidad “pruebas dinámicas”, es decir con la embarcación en movimiento, para localizar averías específicas que no se podrían verificar en el amarre. La interfaz reconstruye una panorámica completa de la situación en la que la anomalía se ha verificado, proporcionando importantes elementos de análisis para identificar las causas de la avería.

NAVIGATOR TXB EVOLUTION

L’evoluzione della diagnosi, disegnato e sviluppato specificamente per l’ambiente Marino.

Le caratteristiche hardware lo rendono compatibile con tutti i protocolli attualmente esistenti, il suo connettore CPC 16 poli integrato consente l’utilizzo di tutti i cavi diagnostici. E’ compatibile con AXONE NEMO e PC. Grazie alla tecnología Bluetooth il tecnico potrá realizzare una diagnosi senza cavi in mezzo, anche dal molo.
Estremamente potente, permette al meccanico una gestione facile degli archivi della mappa. Gli standard CAN supportati offrono la possibilità di gestire: CAN single wire e un altro CAN controller per eseguire le diagnosi su più reti.
Permette la registrazione di una sessione di diagnosi in modalità “prova dinamica”, ovvero con l’imbarcazione in movimiento, per constatare avarie specifiche che non si possono verificare in officina. La sua interfaccia permette di ricostruire una panoramica completa della situazione in cui l’anomalia si è verificata, fornendo gli elementi per identificare le eventuali avarie.

DISEGNO DEI PISTONI

Existen tres tipos de diseño diferentes utilizados en los motores Johnson-Evinrude: Crossflow, Loopcharged y 4 Tiempos.
There are three basic piston designs used in Johnson / Evinrude outboard engines: Crossflow, Loopcharged and Four-Stroke.
Esitono tre tipi di disegno diversi utilizzati nei motori Johnson-Evinrude: Crossflow, Loopcharged e 4 Tempi.

CROSSFLOW

Mientras la mezcla de aire y combustible circula a través del cilindro, un deflector dirige la mezcla hacia la cámara de combustión.
As the air / fuel mixture travels through the transfer port and into the cylinder, a deflector, cast into the top of the piston, directs the air / fuel mixture towards the combustion chamber.
Mentre la miscela d’aria e il combustibile circolano attraverso il cilindro il deflettore del pistone dirige la miscela verso la camera di combustione.

LOOPCHARGED

El motor loopcharged tiene una toma de transferencia en la pared del cilindro, de tal forma que dirije la mezcla de aire y combustible hacia la cámara de combustión, arrancando así, sin la necesitadad de un deflector.
A loopcharged engine has a transfer port cast into the cylinder wall in such a way that it will direct the air / fuel mixture towards the combustion chamber and spark plug tip without the need for a piston deflector.
aspirazione nella parete del cilindro in maniera tale da dirigere la miscela d’aria e combustibile verso la camera di combustione, non avendo così la necessità di convogliare la combusitone con il deflettore.

4 TIEMPOS
FOUR-STROKE
4 TEMPI

Los motores de 4 tiempos son bastante nuevos en la industria náutica. Son los favoritos de la mayoría de los fabricantes pues respetan las leyes sobre el medio ambiente. El aceite almacenado en el cárter de estos motores sale disparado hacia las paredes de los pistones y sus aros para su lubricación.
Four-stroke / four-cycle engines are fairly new to the marine industry. They have become the engine design preferred by most marine engine manufacturers to meet government mandated exhaust emission standards. Oil stored in the crankcase of these engines is splashed onto the cylinder walls for piston and ring lubrication.
I motori a 4 tempi sono abbastanza nuovi nell’ industria nautica. Sono i preferiti dalla maggior parte dei fabbricanti perchè rispettano le leggi sull’ ambiente. L’olio è immagazzinato nel carter di questi motori e scorre nelle pareti dei pistoni e delle fasce per la lubrificazione.
