ALL IN ONE

“THE SUPER HERO HAS SIMPLY EVERYTHING: LOW WEIGHT, QUICK RESPONSIVENESS LIKE A THREE-BATTEN DESIGN AND THE STABILITY OF A 5-BATTEN ONE.”

VICTOR FERNÁNDEZ

SUPER HERO is THE ultimate wave sail which always performs optimally in all wave conditions around the globe. The perfectly balanced sail is the personal favourite of PWA Wave double world champion Victor Fernandez and is a real World Cup asset that is designed specifically for wave usage. Thanks to the absolutely neutral and perfectly balanced handling, its calm handling characteristics are unrivalled and it remains stable and highly controlled in every situation. The SUPER HERO feels like a three-batten design combined with the stability of a five-batten one. The specially developed profile blows out very efficiently and produces high propulsion even when underpowered, which is why it's suitable for almost all riders, regardless of weight.

The SUPER HERO's consistent evolution makes it an even better World Cup sail with an extremely wide range of use in the wave. It continues to give a top-end performance even under the brutal conditions of locations such as the Canary Islands or South Africa, remaining under perfect control with high winds and during extremely overpowered jumps. And yet it also boasts powerful acceleration capabilities at the lower wind limit, alongside an excellent on/off response, which would come in handy when participating in down-the-line surfing on Maui or Mauritius.

To achieve this extraordinary overall package, designer Kai Hopf is tasked with combining numerous individual designs into a single concept. This includes the BATTEN-FREE CENTRE, additional MINI BATTENS, the HOLLOW LOWER LEECH and RADIAL LOAD STRIPES running from the clew. Only then can this four-batten wave sail offer a wind range whose breadth is without rival. An optimised panel layout provides increased stability and control for all sizes 5.0 and up.

In terms of handling, the superiority of the SUPER HERO is beyond doubt thanks to its low weight. The batten rotation is beautifully soft, even with minimal outhaul tension. The top has a highly active role to play as well, thus supporting the forward pull. For this reason you can confidently choose a smaller sail size than with many other wave sails. Note: The SUPER HERO has been designed as a true wave sail and is only partially suitable as a flat-water, high-wind sail, for which we recommend the SUPER SESSION instead.

SUPER HERO HD

Although generally sharing the same structure, the SUPER HERO HD dispenses with monofilm even in the window panel.

KEY FEATURES

- + XPLY PLUS (100/150 microns): The laminate with the lowest stretch and the best UV and puncture resistance on the market
- + TRI PLY foot panel (150 microns): The added third thread line boosts the fabric's ripstop properties by 30%
- + MADE TO SURVIVE: The SUPER HERO has the smallest monofilm window of all four-batten sails on the market
- + HOLLOW LOWER LEECH with additional MINI BATTEN: This stabilises the profile above the boom and prevents leech flutter
- + The additional RADIAL LOAD STRIPES in the clew improve profile stability and extend the wind range
- + BATTEN-FREE CENTER: As responsive as a three-batten model in drift & go conditions and yet astonishingly stable in overpowered conditions
- + iBUMPER 2.0: Even more lightweight and effective, with an integrated trim indicator
- + Virtually unbreakable epoxy battens
- + Also available in a monofilm-free HD version
