

# POWER.XT 2.0

**AN INSPIRING (R)EVOLUTION – THE POWER.XT 2.0 CAN DO MUCH MORE AND DO IT BETTER THAN THE PREVIOUS MODEL. AND AS POWER.XT 2.0 AERO RDM 34 IT IS ALSO THE MOST LIGHTWEIGHT RATCHET EXTENSION OF ALL TIME!**

Beyond the basic idea, the POWER.XT 2.0 has almost nothing in common with the previous model any more. From the extremely solid ratchet mechanism plus lever to the simplified release mechanism, the high-strength Lyros® Dyneema harness lines and the option to retrofit the damper function – everything has been radically upgraded. The latest version comes with a completely new adjustment ring, which offers a unique feature: based on the tried-and-tested SDM adjustment ring, the RDM version now for the first time ensures that the aluminum tube does not come into contact with the mast anymore, which avoids any contact corrosion. No other RDM extension can offer that! In order to guarantee the same durability despite the reduced diameter, a double-walled construction of 7075 aluminum outer tube and ovalized T8 inner tube is used (patent pending).

For many years, the POWER.XT has been the benchmark when it comes to extensions with trimming tools. Those who use it will never want to do without it again. Thanks to the integrated lever, it overcomes even the strongest downhaul forces, enabling perfect re-trimming or fine-tuning even when on the water. Even children could handle the extreme luff tension of modern slalom sails, each profile can be adjusted to millimetre precision in a matter of seconds. The 15 cm long lever and the ratio of 1:60 enable trimming without any noticeable effort.

**INTEGRATED RATCHET  
ADVANTAGES WHEN SETTING UP THE SAIL:**

- + Faster setup: Simply attach the rope loop and fasten them to the standard cleat.
- + Significantly less effort required (power ratio 1:60)
- + No trimming tools necessary (e.g. "easy rig" or crank)

**ADVANTAGES ON THE WATER:**

- + Re-trimming possible on the water – both tensioning and releasing (e.g. at varying wind strength)
- + Increased safety
- + Sail performance and range of use are for the first time being fully utilised

**2 THREAD SYSTEM –  
COMPATIBLE WITH ALL SAIL BRANDS**

- + The POWER.XT 2.0 has an external pulley made from high-quality metal in order to attach the harness lines in the Loop-Loop-Go method – for the quickest and most comfortable trimming ever!
- + It is also the first choice for sails with twisted tack rollers (e.g. Loft, Naish, Severne) because their rope alignment are taken into account. However, these sails do require you to thread in the harness lines.

**RAPID RELEASE – EXTREMELY FAST DE-RIGGING  
ADVANTAGES WHEN DE-RIGGING:**

- + Thanks to RAPID RELEASE, the sail can be released in just a single movement. Due to the modified position of the standard cleat you need only place one foot on the extension and pull the rope out of the cleat with a single jerk.

**POWER.XT 2.0**

SHOX.BASE >> ADDITIONAL  
NET WEIGHT = 70 G)

**SHOX UPGRADE KIT FOR INNOVATIVE  
SUSPENSION TECHNOLOGY**

The unique DUOTONE SHOX suspension system can be retrofitted to all POWER.XT 2.0 SDM models. SHOX is the first shock absorber to be integrated into the extension which gives the windsurfing board a real chassis, just like the full suspension used in mountain bikes. When in choppy waters in particular, it gives stability to your board and rig, withstands gusts of wind and absorbs energy when landing jumps. Tests conducted by all the leading windsurfing magazines have confirmed that, with this feature, riders can convert wind pressure more effectively into forward pull, making them 2–3 knots faster and protecting the materials and joints. Whether you have a speed, racing or freeride setup, the POWER.XT 2.0 combined with the SHOX UPGRADE KIT adds more control, boosts speed and provides greater rider comfort. And when you're on the wave, the SHOX suspension system ensures softer landings and enhanced board control both down the line and when cresting a breaking wave. The SHOX UPGRADE KIT is of course available for RDM and SDM POWER.XT 2.0 of all lengths.
