

Sprinttrack installation instructions

Tools needed for installation

Cutter Knife

Vacuum cleaner

Window wiper

Thoroughly clean the floor using a broom or vacuum cleaner to remove all dust and dirt.

Unroll the sprinttrack in its intended position and ensure it lies completely flat. If needed, place weights on the track to help it settle. Allow it to rest for 24 hours.

Roll up one half of the track. Apply double-sided tape along the exposed area where the track will be installed. Use a window wiper or roller to press the tape firmly onto the floor, ensuring strong adhesion.

Carefully peel off the protective layer from the tape.

5

Gradually unroll the track over the adhesive surface, keeping it flat and even. Smooth it down as you go to prevent air pockets or wrinkles.

6

Repeat the process for the other half of the track.

7

For a final touch, vacuum the track to remove dust or loose fibers. Your sprint track is now ready for use!

Good luck!
