Manual for mounting LED Panel Suspension Kits
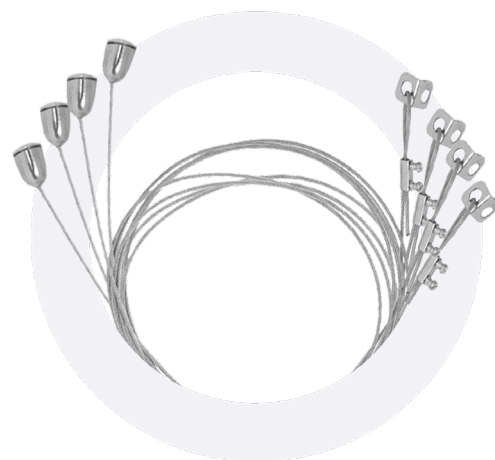

The kit will be fixed to the panel in 4 points, therefore, remove the **4 screws** nearest to the corners in order to guarantee a more secure installation.

*Note:* 120x60 panels need 6 fixing points, 4 on the edges and two in the centre.

1 Introduce the **first piece** through the indicated part of the cable.

2 Then the **second**.

3 And the **third one**.

4 Bend the cable and fish it through the second piece to **form a loop**.

5

Screw the second piece ensuring it's well tightened.

6

Screw the third piece to the panel.

7

Take the last piece and **insert the largest screw.**

8

Screw the piece to the end of the cable. Screw the piece into the ceiling.
